B 29

Robert F Dorr

Boeing B-29 Superfortress William Wolf,2005 Although many books have been published about the B-29, none has been an indepth look, with most being either superficial pictorials or focusing on the bombing campaigns, particularly the incendiary attacks and atomic bombings. This book, using rare, previously unexplored sources, intends to provide the definitive look at the bomber and crew, detailing every facet for the air enthusiast, historian and modeler. The author was granted rare access to the Pima Air & Space Museum's restored B-29 Sentimental Journey for inspection and photography, resulting in the most extensive photographic documentation of the B-29 ever published. The Pima Museum's archives, filled with B-29 technical and crew manuals also gave the author extensive information that had not been previously published. These sources, the author's extensive personal library, and microfilm resources enabled the author to produce this comprehensive look at the bomber and its crew in the context of the bomber's development and operational use. It is truly monumental in scope, both in words and photos.

Superfortress Curtis E. LeMay, Bill Yenne, 1988

The B-29 Superfortress Chronology, 1934Đ1960 Robert A. Mann,2010-01-19 The Boeing B-29 Superfortress lived an operational life of only 26 years, but what a life it was. The introduction to this book provides basic information on the physical plane: dimensions, specs, leading particulars and operational usages. Then an exhaustive day-by-day chronology of the B-29 is presented—from the earliest designs in 1934 through thousands of missions and aircraft events in World War II and Korea to the 1960 retirement of the last operational B-29. The book also includes an extensive glossary and three appendices, which provide a discussion of the general anatomy of a mission, a sample of operational voice or radio codes used in 1945, and a guide to (very unofficial) aircraft names.

B-29 Superfortress Units of the Korean War Robert F Dorr,2012-12-20 This book is the story of a majestic bomber of the propeller era flying perilous combat missions against a sleek, nimble warplane of the jet age, the Soviet MiG-15. A very heavy bomber and a sky giant during World War 2, at that time the B-29 was the most advanced combat aircraft in the world. By the time North Korea attacked its southern neighbour in 1950, the B-29 had been reclassified a medium bomber. Many of its crew members had fought their war and settled down to raise families and begin careers only to be recalled to fight another war on a distant Asian peninsula.

Superfortress Curtis E. LeMay, Bill Yenne, 2006 The Complete Story of the Design, Development, and Deployment of an Iconic Aircraft Among the most sophisticated aircraft flown during World War II, the Boeing B-29 Superfortress was designed to replace the B-17 as the primary long-range bomber of the U.S. Army Air Forces. With its distinctive glazed nose and long, thin wings that provided both speed at high altitude and stability at takeoff and landing, the Superfortress was the first operational bomber with a pressurized crew cabin and featured advanced radar and avionics. Armed with remote-controlled machine gun turrets and a 20,000 pound bomb load, it was the first USAAF bomber capable of mastering the vast distances of the Pacific Theater of World War II. The prototype flew in September 1942 but a series of post-production modifications delayed the bomber's first mission until April 1944. Superfortresses began attacking Japan in daylight with conventional ordnance from high altitude, but their mission was redirected in March 1945, with massive low-level formations dropping incendiary bombs! at night on Japanese cities. The ensuing firestorms, followed by the complete destruction of Hiroshima and Nagasaki by atomic bombs dropped from two specially modified silverplate B-29s, forced Japan to cease fighting. Written by the man who led the B-29 into combat, Superfortress: The Boeing B-29 and American Airpower in World

War II is an important document of one of the most turbulent times in world history. General Curtis LeMay recalls the early debate about whether or not the United States needed a long-range bomber, how the B-29 was created and produced despite the enormous logistical difficulties of the design, and the decision to conduct fire-bombings against Japan and ultimately drop the atomic bomb. Highly praised when it was first published, this new edition is complete with photographs, a new introduction, and statistical tables.

The B-29 Superfortress Robert A. Mann,2015-07-11 The B-29 Superfortress was for many years a cornerstone of American military aviation. Best known as a bomber, it also served in reconnaissance, as a tanker, and as a rescue plane. It was a crucial tool for American and Allied forces during World War II, Korea and beyond. This operational history of the B-29 gives in-depth information on the career of each plane. A list of the names and serial numbers of the planes, each plane's history from delivery date to removal from service, a description of the B-29's physical characteristics and performance parameters, and a description of the five B-29 variants are provided. Sections of the book give complete mission data for the B-29's World War II service in the China-Burma-India theater of operations, operations over Japan, aerial mining missions and test atomic bombing runs.

B-29 Hunters of the JAAF Koji Takaki, Henry Sakaida, 2012-10-20 B-29! No other term struck such terror in the hearts of the Japanese public during World War 2 than this single, most-hated name. It was then only natural that the pilots who attempted to shoot these high-flying Boeing bombers out of the skies over Tokyo, Nagasaki, Hiroshima and Kobe should become known as the elite of the Japanese Army Air Force. This book details the exploits of the 'Dragon Slayers' who, flying the very latest singleand twin-engined fighters, exacted a heavy toll on the AAF Boeing bombers using a range of tactics including ramming.

B-29 Superfortress Units of World War 2 Robert F Dorr,2012-12-20 The ultimate piston-engined heavy bomber of World War 2, the first production B-29s were delivered to the 58th Very Heavy Bomb Wing in the autumn of 1943. By the spring of 1944 the Superfortress was bombing targets in the Pacific, and by war's end the aircraft had played as great a part as any weapon in ending the conflict with the Japanese. Indeed, the final dropping of two atomic bombs from the B-29 convinced the Japanese to sue for peace. This book traces the wartime career of the B-29, as the aircraft went from strength to strength in the Pacific Theatre.

B-29 Superfortress Combat Chronicles Robert Hilton,2012 With its pressurized cabins for high-altitude operation, its long range, large bomb capacity, and turbo-supercharged engines, the B-29 Superfortress was the epitome of cutting edge American air power during WWII. The author, a photographer with the 40th Bomb Group and a veteran of 83 Superfortress missions, offers a first-hand, eye-witness account and shares his experiences on reconnaissance and bombing missions, flying the 'Hump' and taking off from an advanced base in Sichuan, China, to pummel Japanese occupation forces throughout Asia. Then in early 1945, the 40th BG moved to newly-liberated Tinian from which they took part in the final chapter of WWII - the aerial assault on the Japanese home islands. Introduces you to fellow veterans of the 40th who relate their no-less extraordinary experiences - ditching in the Bay of Bengal, lost in the Siberian Taiga, downed behind enemy lines in China, taken prisoner after bailing out over Tokyo. Personal accounts from the men who served on the front lines of the air war in the Pacific, a unique primary historical source and a truly exciting read.

Building the B-29 Jacob A. Vander Meulen, 1995 Jacob Vander Meulen describes the efforts of Henry Hap Arnold and others to launch the project via a process now called concurrency, in which production is set up while the product is still on the drawing boards.

Birds from Hell Wilbur H. Morrison, 2001

B-29 Superfortress Graham M. Simons, 2012-09-19 "A well written history of a history-changing aircraft," the bomber that carried the two atomic bombs that destroyed Hiroshima and Nagasaki in WWII (Aeromilitaria). The Boeing B-29 Superfortress was a four-engined heavy bomber flown primarily by the United States in World War Two and the Korean War. The name "Superfortress" was derived from that of its well-known predecessor, the B-17 Flying Fortress. The B-29 was the progenitor of a series of Boeing-built bombers, reconnaissance aircraft, trainers and tankers including the variant, B-50 Superfortress. The B-29 was one of the largest aircraft to see service during World War Two. A very advanced bomber for its time, it included features such as pressurized cabins, an electronic fire-control system and remote-controlled machine-gun turrets. Though it was designed as a high-altitude daytime bomber, in practice it actually flew more low-altitude nighttime incendiary bombing missions. It was the primary aircraft in the American firebombing campaign against Japan in the final months of World War Two. Unlike many other World War Two-era bombers, the B-29 remained in service long after the war ended, with a few even being employed as flying television transmitters. The type was finally retired in the early 1960s, with 3,960 aircraft in all built. Without doubt there is a clear, strong requirement to "put the record straight" using primary source documentation to record the undoubted achievements alongside and in context with the shortcomings to the type's design and operation that have otherwise received scant attention. The book covers all variants and is profusely illustrated.

Author Gene Gurney takes the reader from the superplane's inception, test flights and production to its combat deployments and its ultimate purpose of dropping the atomic bombs on Hiroshima and Nagasaki.

B-29 Airplane Commander Training Manual in Color United States Air Force, 2008-09 The Boeing B-29 was one of the most sophisticated aircraft of WWII. It featured many innovations including guns that could be fired by remote control and pressurized crew compartments. It was also the heaviest production plane of the war, with terrific range and bomb-carrying capabilities. Carrying a crew of ten, the Superfortress devastated Japan in a series of raids in 1944-45. Finally, in August of 1945, the B-29s Enola Gay and Bock's Car dropped the atomic bombs and forced Japan to surrender. Originally printed by the U.S. Army Air Force, this B-29 Airplane Commander Pilot's Training Manual taught pilots everything they needed to know about the Superfortress. Classified ¿Restricted¿, the text was declassified long ago and is here reprinted in book form. This impressive facsimile presents the manual in its entirety. It is over 200 pages long, and reproduced in its original multi-color glory for the first time ever.

Memoirs of a B-29 Pilot Charles R. Reyher,2008 Merriam Press World War 2 Review Series. From training as a pilot cadet, to bomb approach pilot, to B-17 instructor pilot, followed by training as a B-29 pilot, he and his crew operated from Guam between June and September 1945, flying 13 missions against oil targets in Japan. The book concludes with the author's personal views on how the

war with Japan could have been ended without the use of the atomic bombs and without invading the Home Islands. 228 pages, 38 illustrations.

B-29 Superfortress Dennis M. Savage, Don Greer, 2011 Equipped with pressurized cabins for high-altitude effectiveness, an electronic fire-control system, and remote-controlled machine-gun turrets, the B-29 Superfortress was the most advanced aircraft of WWII. Two of those planes, Enola Gay and Bockscar, dropped the atomic bombs on Hiroshima and Nagasaki in 1945. Yet over all, the B-29 received less notoriety than its storied elder siblings, the B-17 and B-24, perhaps because its service areas (the China, Burma, and India Theater and the Western Pacific) were less publicized than was the war in Europe. Designed by Boeing, nearly 4,000 B-29s had been turned out by the time production ended in 1946. Yet today, only a few meticulously restored and preserved examples of the historic aircraft survive.

B-29 Superfortress John Pimlott, 1983

Boeing B-29 Superfortress Mantelli - Brown - Kittel - Graf, 2019-02-08 The Boeing B 29 Superfortress will be remembered as the apparatus to have made use of the atomic weapon in war action; in fact, airplanes of this type that dropped the atomic bombs on Hiroshima and Nagasaki to force Japan to surrender in August 1945. Apart from that, however, the Boeing B 29 was an excellent aircraft, with avant-garde features, including turrets with automatically maneuverable weapons at a distance and pressurized compartments for the crew. The American interest in a bomber capable of carrying a considerable offensive load over long distances and at high speeds dates back to the Boeing XB 15 of 1933. Although in the second half of that decade, the interest in such a weapon fades, Boeing continued to elaborate the design of similar projects, culminating in the 341 model, which was believed to be capable of carrying a cargo of 2,240 pounds (just over 1,000 kg) of bombs with a flight range of 7,000 miles (11,265 km) at a speed of over 400 miles/h (644 km/h). However, with the outbreak of World War II in Europe and the possibility of a forthcoming American involvement in it, the US Air Force Corps (USAC) again showed interest in any weapon that would put the United States in the possibility of bombing the enemy even at very great distances. So in February 1940, the request was made of the so-called Hemisphere Defense Weapon (weapon for the defense of the hemisphere), namely a bomber capable of transporting 2,000 pounds (907 km) of bombs over a distance of 5,333 miles (8,600 km) at a speed of 400 miles / h (644 km/h). The bomber should have also self-supporting tanks, good armored protection, heavy defensive armament and a chance to transport 16,000 pounds (7,250 kg) of offensive cargo.
