**Bachem Ba 349 Natter** Robert Forsyth,2018-06-28 The Bachem Ba 349 Natter was a secretive, vertical take-off, single-seat rocket interceptor intended to offer high-speed defence of key targets. This radical aircraft offered Luftwaffe an inexpensive means with which to intercept and attack Allied heavy bombers using a vertically-launched, semi-expendable machine built of wood and armed with a nose-mounted 'honeycomb' battery of spin-stabilised air-to-air rockets as well as cannon armament. Launched vertically at 36,000ft per minute, the pilot was expected to fly within range of the enemy bombers, fire his rockets at them, ram another bomber, eject and parachute to the ground. Illustrated with contemporary photographs and stunning commissioned artwork, this study examines this inventive yet ultimately unsuccessful attempt by the Luftwaffe to defend against the tide of Allied aircraft that was bombing German cities into the ground.

*Bachem Ba 349 Natter* Gustavo Uruea A., Sir,2016-07-07 The Bachem Ba 349 Natter was a World War II German point-defence rocket powered interceptor, which was to be used in a very similar way to a manned surface-to-air missile. After a vertical take-off, which eliminated the need for airfields, the majority of the flight to the Allied bombers was to be controlled by an autopilot. The primary mission of the relatively untrained pilot, was to aim the aircraft at its target bomber and fire its armament of rockets. The pilot and the fuselage containing the rocket motor would then land under separate parachutes, while the nose section was disposable. The only manned vertical take-off flight on 1 March 1945 ended in the death of the test pilot, Lothar Sieber. Von Braun Rocket Interceptor On June 15 1939 at the highlyly secret Luftwaffe test station called Peenemünde-West, a diminutive aircraft took off from the aerodrome with test pilot Erich Warsutz at the controls. The Heinkel 176 was quite conventional in shape but had no propeller or air-intake. It was propelled by Hellmuth Walter's HWK R 1-203 hydrogen peroxide rocket motor.1The aircraft quickly accelerated to nearly 600 km/h, flew briefly around the aerodrome and landed. In the process it became the first aircraft to achieve a controlled flight powered only by a liquid propellant rocket motor.2 Five days later Warsitz flew a second circuit of the aerodrome. This trial was announced officially and is generally referred to in aviation histories as the first successful flight. Two years earlier Dr. Wernher von Braun and his team, in addition to their A-4 project, were also working on rocket propulsion for the Luftwaffe. The plan was for von Braun's group to develop a more

**Bachem Ba 349 Natter** David Myhra,1999 The pilot-operated Bachem Ba 349 Natter (Adder) was one of several unexpected new weapons Germany was seeking to perfect for a more effective defense against Allied heavy bombers. The idea of the ground-to-air missile to slow down, if not stop, attacking aircraft was one of the greatest developments to come out of World War II, and Germany led the field. David Myhra has taken 240 photographs and illustrations from his collection and presents the world's first defense interceptor missile – the manned Ba 349 Natter. AUTHOR:

**X-Planes** Manfred Griehl,2012-10-24 Renowned German aviation specialist Manfred Griehl has collected a unique and valuable selection of photographs of Luftwaffe projects that never made it into battle. They remained on the drawing board or at prototype stage either because they were deemed unsuitable or the developers simply ran out of time and the projects never went into production. Most photographs come from the development sites and testing grounds of the major manufacturers of Nazi Germany: companies such as Dornier, Junkers, Focke-Wulf and Heinkel all received funding from the government to develop bigger and faster aircraft. A huge amount of private testing went on with major organizations such as Daimler-Benz, BMW and Siemens investing huge amounts in new engine systems and other advances such as radar. This book also details the innumerable alterations that were made to existing service aircraft to equip them for new roles. There are examples of Fw190s developed for the delivery of chemical and toxic weapons, the high altitude Junkers EF 61, the early prototype WNF 342 helicopter as well as numerous examples of developmental jet fighters that could very well have been realized had it not been for the effectiveness of the Allied bombing campaign in restricting the supply of necessary materials.

**Culture, History and Ideology in the Formation of Ba'thist Iraq,1968-89** Amatzia Baram,1991-03-20 In this book, an innovative approach to the study of ideology in the Arab world explores how, through culture and the re-interpretation of history, a powerful totalitarian regime has endeavoured to cement internal unity among Iraq's diverse ethnic and religious communities. The book analyzes the ways in which, to imbue its citizens with a common destiny of Arab leadership, this regime has set out to convince the Iraqi people to see themselves as the heirs of all the great civilizations of Mesopotamia.

**Warsaw 1920** Steven J. Zaloga,2020-05-28 The Battle of Warsaw in August 1920 has been described as one of the decisive battles of European history. At the start of the battle, the Red Army appeared to be on the verge of advancing through Poland into Germany to expand the Soviet revolution. Had the war spread into Germany, another great European war would have ensued, dragging in France and Britain. However, the Red Army was defeated by 'the miracle on the Vistula'. This campaign title explores the origins and outcomes of this momentous battle. In May 1920, the Polish Army intervened in war-torn Ukraine, pushing all the way to Kiev, but the Red Army, by now triumphant in most of the theatres of the Russian Civil War, turned its attention to this new threat. By the late summer of 1920, two Soviet armies had advanced into Poland and the overconfident Soviet leadership dreamed of advancing over a prostrate Polish Army into neighbouring Germany to ignite a Communist revolution in the heart of Europe. Thanks to the low density of forces on both sides and the huge distances involved, the conflict was a war of manoeuvre, with a curious mixture of traditional and advanced tactics. Horse cavalry played a dominant role in the fighting, but aeroplanes, tanks, and armoured trains lent the war an air of modernity. This illustrated study explores the war through the lens of the Battle of Warsaw, the turning point when, after a summer of disastrous retreat, the Polish army rallied and repulsed the Red Army at Warsaw and Lwow.

**Project Natter** Brett Gooden,2005-12-31 In 1944, in response to the bombing of German cities and factories by the Allies, an inventor named Erich Bachem developed 'Projekt Natter' ('Viper'), an extraordinary, highly-secret, vertical take-off, semi-expendable, single-seat rocket-fighter armed with a nose-mounted 'honeycomb' of 73-mm or 55-mm spin-stabilized air-to-air rockets as well as 30-mm cannon. The Natter was intended to offer high-speed defense of key targets. Once blasted into the air from its vertical launch tower, the pilot of the Natter was to climb towards an enemy formation using an internal rocket, target an enemy bomber and fire his battery of rockets. He would then use the remaining kinetic energy to climb higher than the bombers in order to mount a ramming attack. Just before impact, the pilot was to trigger a mechanism that would activate an ejection seat and separate the rocket unit, which would return to earth by means of an automatically deployed parachute for reuse. Relatively little has been published on the Natter and this book will provide a detailed and definitive account of this unusual but fascinating aircraft. This will be required reading for all those interested in the history of the Luftwaffe during World War II, particularly for those fascinated by the radical and revolutionary projects which German aircraft designers contrived toward the end of the Nazi regime.
