Assessment of Auxiliary Backwash Method for Rapid Sand Filters Richard C. Pohlman, Deborah H. Metz, Jack DeMarco, 2006 The primary objective of this project was to determine differences in filter effluent water quality and media cleanliness between sand filters employing air scour and those employing surface wash. Discussed in detail are the findings that scour and surface wash systems performed similarly relative to filter effluent quality and filter cleanliness. The advantages of one system over another can be site-specific particularly in retrofit applications.

The Backwash of War Ellen Newbold La Motte, 1916 This war has been described as Months of boredom, punctuated by moments of intense fright. The writer of these sketches has experienced many months of boredom, in a French military field hospital, situated ten kilometres behind the lines, in Belgium. During these months, the lines have not moved, either forward or backward, but have remained dead-locked, in one position. Undoubtedly, up and down the long-reaching kilometres of Front there has been action, and moments of intense fright have produced glorious deeds of valour, courage, devotion, and nobility. But when there is little or no action, there is a stagnant place, and in a stagnant place there is much ugliness. Much ugliness is churned up in the wake of mighty, moving forces. We are witnessing a phase in the evolution of humanity, a phase called War-and the slow, onward progress stirs up the slime in the shallows, and this is the Backwash of War. It is very ugly. There are many little lives foaming up in the backwash. They are loosened by the sweeping current, and float to the surface, detached from their environment, and one glimpses them, weak, hideous, repellent. After the war, they will consolidate again into the condition called Peace. After this war, there will be many other wars, and in the intervals there will be peace. So it will alternate for many generations. By examining the things cast up in the backwash, we can gauge the progress of humanity. When clean little lives, when clean little souls boil up in the backwash, they will consolidate, after the final war, into a peace that shall endure. But not till then.

The Backwash of War Ellen N. La Motte, 2019-02-05 Not only did La Motte boldly breach decorum in writing *The Backwash of War*, but she forcefully challenged societal norms in other equally remarkable ways, as a debutante turned Johns Hopkins-trained nurse, pathbreaking public health advocate and administrator, suffragette, journalist, writer, lesbian, and self-proclaimed anarchist.

Backwash Martina Delgado, 2022-09-23 Backwash is a collection of poetry based on the generational knowledge passed down by the author's Afro-Caribbean family. Each poem embodies the lessons learned behind that knowledge and opens the door to conversations about healing and transformation.

Mathematics Manual for Water and Wastewater Treatment Plant Operators, Second Edition: Water Treatment Operations Frank R.

Spellman, 2014-05-07 To properly operate a waterworks or wastewater treatment plant and to pass the examination for a waterworks/wastewater operator's license, it is necessary to know how to perform certain calculations. All operators, at all levels of licensure, need a basic understanding of arithmetic and problem-solving techniques to solve the problems they typically encounter in the workplace. Hailed on its first publication as a masterly account written in an engaging, highly readable, user-friendly style, the Mathematics Manual for Water and Wastewater Treatment Plant Operators, Second Edition has been expanded and divided into three specialized texts that contain hundreds of worked examples presented in a step-by-step format. They are ideal for all levels of water treatment operators in training and practitioners studying for advanced licensure. In addition, they provide a handy desk reference and handheld guide for daily use in making operational math computations. This second volume, Water Treatment Operations: Math Concepts and Calculations, covers computations commonly used in water treatment with applied math problems specific to waterworks operations, allowing operators of specific unit processes to focus on their area of specialty. It explains calculations for pumping, water source and storage, coagulation and flocculation, sedimentation, filtration, chlorination, fluoridation, and water softening. The text presents math operations that progressively advance to higher, more practical applications of mathematical calculations, including math operations that operators at the highest level of licensure would be expected to know and perform. To ensure correlation to modern practice and design, this volume provides illustrative problems for commonly used waterworks treatment operations found in today's treatment facilities.
