Modern Technologies Enabling Safe and Secure UAV Operation in Urban Airspace P. Śniatała,S.S. Iyengar,A.

Bendarma,2021-07 The use of Unmanned Aerial Vehicles (UAVs) or ‘drones’ continues to increase, and keeping up to date with technological, legal and commercial developments related to this domain is important, particularly with regard to safety and security in regional and border security operations. This book presents edited contributions from the NATO Advanced Training Course (ATC) entitled “Modern technologies enabling safe and secure UAV operation in urban airspace”, held in Agadir, Morocco, from 25 to 30 November 2019. Participants included experienced scientists and industry engineers involved in UAV development and activity, and the aim of the ATC was to increase awareness among all NATO and partner countries of the safety and security challenges raised by UAV flights in urban airspace, as well as sharing the knowledge and expertise of specialists working to advance the technologies and capabilities that will enhance safety and security across NATO and its partner countries. The ATC began with a presentation about current UAV technologies, and the technological features that might present a threat to the safety of commercial or military airspace applications. Other topics covered included the U-space concept; management of UAV operations in controlled airspace; integration of manned and unmanned aviation; testing and certification of UAVs; autonomous UAV flights; application of UAVs in urban airspace; and BVLOS flights and sensors for UAV navigation and communication. The book will be of interest to all those working with UAVs or seeking to develop and encourage their use, particularly for security purposes.

The Origin of Chronic Inflammatory Systemic Diseases and their Sequelae Rainer Straub, 2015-04-08 Chronic inflammatory diseases such as rheumatoid arthritis, ankylosing spondylitis, multiple sclerosis, inflammatory bowel diseases, and others typically stimulate a systemic response of the entire body. This response has a uniform character in many diseases because common pathways are switched on. The uniform response regulates systemic energy and water provision. However, long-term application of this program leads to typical disease sequelae such as fatigue / depressive symptoms, sleep disturbances, anorexia, malnutrition, muscle wasting – cachexia, cachectic obesity, insulin resistance, dyslipidemia, alterations of steroid hormone axes, disturbances of the hypothalamic-pituitary-gonadal axis, elevated sympathetic tone, hypertension, volume expansion, decreased parasympathetic tone, inflammation-related anemia, bone loss, hypercoagulability, circadian rhythms of symptoms, and disease exacerbation by stress . The Origin of Chronic Inflammatory Systemic Diseases and Their Sequelae demonstrates concepts of neuroendocrine immunology, energy and water regulation, and evolutionary medicine in order to show that the uniform response that regulates systemic energy and water provision, has been positively selected for acute physiological responses and short-lived disease states, but is a misguided program in chronic inflammatory diseases and aging. Offers a broad conceptual framework with a strong clinical link, written in an easy to grasp style and demonstrating the link to aging research Describes the important principles derived from basic immunology that are used to explain pathogenesis of chronic inflammatory systemic diseases with a focus on autoimmunity Defines the bioenergetics and energy regulation of the body explaining common response pathways typical for systemic inflammation Makes use of evolutionary medicine theory to demonstrate the uniformity of the systemic response Explains the appearance of typical disease sequelae on the basis of the three pillars: neuroendocrine immunology, energy regulation, and evolutionary medicine theory Contains color figures and tables that explain the field to newcomers

The role of microRNAs in controlling protein expression noise Jörn Schmiedel, 2016-03-31 The expression of genes is based on stochastic processes, which lead to temporal fluctuations in the number of proteins of each gene. If such fluctuations become too large they can be detrimental to the fitness of an organisms, because most cellular processes are based on the precise interaction of proteins. This PhD thesis explores the role of post-transcriptional regulatory mechanisms in the control of stochasticity in gene expression, with a focus on microRNAs, common regulators in multicellular organisms. Bioinformatic data analysis, mathematical modeling and single cell expression experiments are used to analyze the conditions under which microRNAs can lead to the reduction of fluctuations in gene expression. The central insight of this thesis is that microRNAs can indeed reduce fluctuations for most genes and that they are likely used by organisms for this purpose, thus ensuring precision to gene expression during development and the maintenance of the adult body. Der Expression von Genen liegen stochastische Prozesse zu Grunde, die zu Fluktuationen in der Menge von Proteinen eines jeden Gens führen. Zu starke Fluktuationen in Proteinmengen können für Organismen schädlich sein, da die meisten zellulären Prozesse auf der präzisen Wechselwirkung von Proteinen beruhen. Diese Dissertationsschrift befasst sich mit dem Einfluss von post-transkriptionellen Regulationsmechanismen auf die stochastischen Prozesse der Genexpression. Mittels bioinformatischer Datenanalyse, mathematischer Modellierung und gezielten Einzelzellexperimenten wird mit Fokus auf die in

Mehrzellern weitverbreiteten microRNAs erforscht unter welchen Voraussetzungen Organismen post-transkriptionelle Regulation zu Verringerung von Fluktuationen benutzen können. Die zentrale Erkenntnis der vorliegenden Arbeit ist, dass microRNAs für die meisten Gene Fluktuationen verringern können und auch zu diesem Zweck genutzt werden.
