Talent Management in Global Organizations Marina Latukha, 2018-09-29 This book explores the implications of talent management in four practical settings across the globe. Focusing on countries in the Asia-Pacific region, Central and Eastern Europe, Latin America and within the Commonwealth of Independent States (CIS), the authors illustrate how multinational corporations (MNCs) can benefit from talent management practices and as a result, develop a strategy of organizational leadership. Offering empirical examples from each region, this book examines how economic and cultural contexts influence talent management. *Talent Management in Global Organizations* discusses successful cases in different cross-cultural settings, and aims to inspire companies around the world to develop and implement talent management practices effectively.

Heavy-Duty Wheeled Vehicles Boris Nikolaevich Belousov, Sergey D Popov, 2014-01-27 Heavy-duty wheeled vehicles (HDWVs) are all-wheel-drive vehicles that carry 25 tons or more and have three or more axles. They transport heavy, bulky cargo such as raw minerals, timber, construction materials, pre-fabricated modules, weapons, combat vehicles, and more. HDWVs are used in a variety of industries (mining, logging, construction, energy) and are critical to a country's economy and defense. These vehicles have unique development requirements due to their high loads, huge dimensions, and specific operating conditions. Hauling efficiencies can be improved by increasing vehicle load capacity; however capacities are

influenced by legislation, road limits, and design. Designing HDWVs differs from other multi-purpose all-wheel-drive vehicles. The chassis must be custom-designed to suit the customer's particular purpose. The number of axles is another variable, as well as which ones are driving and which are driven. Tires are also customizable. Translated by SAE from Russian, this book narrates the history of HDWVs and presents the theory and calculations required to design them. It summarizes results of the authors' academic research and experience and presents innovative technical solutions used for electric and hydrostatic transmissions, steering systems, and active safety of these vehicles. The book consists of three parts. Part one covers HDWV design history and general design methods, including basic vehicle design, and evaluating HDWV use conditions. Part one also covers general operation requirements and consumer needs, and a brief analysis of structural components of existing HDWVs and prototypes. Part two outlines information needs for designing HDWVs. Part three reviews basic theory and calculation of innovative technical solutions, as well as special requirements for component parts. This comprehensive title provides the following information about HDWVs: • History of design and manufacture. • Manufacturers' summary design data. • Background data on sample vehicles. • Component calculation examples. • Overview of motion theory, which is useful in design and placement of bulky cargo.

Russian Law Journal Dmitry Maleshin, The

International editorial board and editorial team are represented by professors from leading world centers of legal education and legal science, like Harvard, Yale, Cambridge and La Sorbonne, as well as by scientists from Russian law schools (Moscow State University, Kutafin Moscow State Law University, Saint-Petersburg State University, Higher School of Economics).

New Developments in Mining Engineering 2015

Genadiy Pivnyak, Volodymyr Bondarenko, Iryna Kovalevska, 2015-10-14 This annual series of books includes scientific papers on mining profiles. This volume presents multiple aspects of mining technology implementation in several aspects: extraction of coal, iron, manganese, uranium and other ores. Capturing and utilization of coalbed methane by various methods including alternative ones, safety measures in mining, ecological aspects, etc. Specific attention is paid to intensification of mineral resources extraction processes by way of modernizing opening methods, development and mining methods depending on mining-geological conditions. Experimental results of stress-strain state rock massif forecast by means of computational experiments using recursive methods are also discussed. Any mining operations

should finally result in adequate recovery of land surface and utilization of mining wastes using various environmentally friendly methods, thus, sufficient attention is paid to this scientific trend. Non-traditional methods of minerals mining are becoming more topical and of higher demand in the modern society. Hence, several papers/chapters are devoted to underground coal gasification and its subsequent processes. In addition, extraction technologies of gas hydrate, as a source of an abundant amount of natural gas, are thoroughly examined in this book, including implementation of gas hydrate technologies for mine methane utilizations with its following transportation in a solid state. Furthermore, attention is given to evaluation of economic efficiency of minerals mining by the proposed methods, their ways of enrichment, ecological aspects and the influence of mining production on the environment, innovational logistic solutions at mining enterprises, and also to perspectives of Ukraine's mining industry integration to the European standards.

Ultra Haulers Mike Woof, For anyone who ever stood in awe of a three-story-high dump truck or marveled at the engineering revolution propelling mechanical vehicles into the robotic age, *Ultra Haulers* presents the past, present, and future of the world's greatest haul trucks. From early rigid trucks and articulated dump trucks to tire technology and scraper tractors, *Ultra Haulers* details the innovations, evolutions, and revolutions in large-scale earthmoving equipment. Author Mike Woof, former editor-in-chief of *World*

Mining Equipment magazine and current international editor for E&MJ and Coal Age, is a leading authority on mining equipment, including the largest, most sophisticated factory-made equipment produced. The book incorporates original analysis, primary data, and firsthand commentary, putting an ear to the ground and a finger to the pulse of this dynamic and exciting field. Both knowledgeable hobbyists and industry veterans will enjoy Woof's sweeping overview, which is beholden to no one manufacturer, no one type of machine, and no one era, but to the entire field. With expert, prescient commentary, Woof's understanding of these machines and enthusiasm for the engineering triumphs they represent comes through on every page.

Growth And Inflation In The Soviet Economy Fyodor I Kushnirsky, 2019-09-10 While growth figures are high for Soviet industry in general, they are especially impressive for the MBMW sector which has far outperformed other sectors of the economy. The question widely debated in the U.S.S.R. now is whether these impressive figures actually reflect the growth of physical output. To put it differently, did the Soviet economy receive

more machines and equipment as a result of this growth, and, if so, was the rate of real growth the same as the growth in value terms? But why would one raise such a question in the first place? To answer this and similar questions, the procedures of Soviet measurement of output, productivity, costs and prices have been analyzed in this study. Special attention is given to the processes of planning quality improvements and pricing new technological items. An analysis of procedures and methodological instructions used in planning and pricing MBMW products may be helpful in revealing possible discrepancies between prices of new goods and their quality characteristics.

Topical Issues of Rational use of Natural Resources 2019 Vladimir Litvinenko,2022-07-30
Topical Issues of Rational Use of Natural Resources 2019 contains the contributions presented at the XV International Forum-Contest of Students and Young Researchers under the auspices of UNESCO (St. Petersburg Mining University, Russia, 13-17 May 2019). The Forum-Contest is a great opportunity for young researchers to present their work to the academics involved or interested the area of extraction and processing of natural resources. The topics of the book include: Volume 1 • Geotechnologies of resource extraction: current challenges and prospects • Solid minerals mining technologies. Industrial and labour safety • Underground space development technologies. Rock mechanics and control of rock conditions • Cutting edge technologies of geological mapping, search and prospecting of mineral deposits • Digital and energy saving technologies in mineral resource complex Volume 2 • Breakthrough technologies of integrated processing of mineral hydrocarbon and technogenic raw materials with further production of new generation materials • The latest management and financing solutions for the development of mineral resources sector • Environment protection and sustainable nature management • New approaches to resolving hydrocarbon sector-specific issues Topical Issues of Rational Use of Natural Resources 2019 collects the best reports presented at the Forum-Contest,

and is of interest to academics and professionals involved in the extraction and processing of natural resources.

Electroslag Technology B.I. Medovar, G.A. Boyko, 2013-03-07 Dr. Boris Medovar, a member of the Soviet Academy of Sciences, is a prominent member of the E.O. Paton Electric Welding Institute in Kiev, one of the pre-eminent institutes of the USSR. The Paton Institute, internationally famous for its entrepreneurial efforts in electrical welding processes, is also famous for its application of electrically based processes in melting and remelting of high alloy and high-temperature materials. These include the ESR (electroslag remelting) process, the ESC (electroslag casting) process, skull remelting based on electron-beam processes, plasma arc processes, and electric arc processes. Along with the ESR process for ingot production is the commercial plasma arc remelt process for specialty steels, particularly where high nitrogen contents may be desired, as in austenitic stainless steels. Major industrial centers are now scattered throughout the USSR and are a major factor in high-alloy, high strength, low- and high-temperature materials. The ESR process was developed in response to the Western development of the VAR (vacuum arc remelting) process for producing very highly alloyed materials during the growth period of the jet engine age. The VAR and ESR processes utilize different purification and refinement processes that are extremely critical in very highly, complexly alloyed superalloys and high-speed tool steels. In water-cooled remelt

systems, they also achieve relatively rapid (directional) solidification, minimizing segregation and coarse phase separation of undesirable impurity elements or elements that tend to form coarse brittle phases.

History of Design and Design Law Tsukasa

Aso, Christoph Rademacher, Jonathan Dobinson, 2022-04-22 For the first time, this book provides an up-to-date history of product design and product design law covering 17 countries – Japan, Korea, China, Singapore, the United Kingdom, Germany, France, Italy, the Nordic countries (Denmark, Finland, Iceland, Norway and Sweden), Russia, the United States, Brazil and Australia – selected for their innovative or

influential approach to design or design protection. Each country is the subject of two chapters – one on the history of design and the other on the history of design law – authored by experts in design and intellectual property (IP) law. This unique interdisciplinary approach explains why and how various national design protection systems (that can include design, copyright, trade mark, competition and civil laws) developed, making it an ideal book for students, researchers and lawyers. The book also serves as an international survey of different national policy and legal responses to historical developments and specific design and legal issues allowing readers to consider their advantages and disadvantages – and so is also recommended for policy and law makers, as well as organizations that administer IP rights. Topics include the subject matter of design protection; procedural and substantive requirements; design registration; infringement; and the overlap of design rights and other IP rights. The chapters on design history provide further context to the historical development of these legal concepts by considering major design movements, key designers and iconic designs and the current state of design. The chapters highlight the connected and often complementary relationship between the two histories, not only for each country, but at the regional and international level, often as a result of government policies, trade, colonialism, immigration and globalisation. Design and design practice continue to become more global and evolve with developments in technology. At the same time,

design laws are not internationally harmonized and continue to develop at the national level, with a number of significant changes occurring in recent years. This timely book shows how the lessons of the past continue to inform the future direction of design and the legal systems developed to protect it.
