Russia Military Aircraft Alexandre Zanfirov,2019-11-09 This is a comprehensive look at the current mix of Russian military aircraft, to include the Tupolev PAK DA stealth bomber and the Sukhoi Su-57 (Felon).

Airborne Early Warning Aircraft Chris Gibson,2023-12-30 Airborne early warning (AEW) has been used since 1941 but, until the computer revolution of the late 1970s, was restricted in its operation to maritime use. Since the 1980s, AEW aircraft have become the must-have force multiplier of any first-rate armed force and as such are worthy of analysis. From the RAF's Wellington ACI of 1941 and the Elgar operations of 1944 to the Boeing E-7 Wedgetails that will enter service next year, the UK has paved the way in AEW technology, albeit not with the greatest success. The Americans, following Britain's lead and taking a hammering from the kamikaze, modified a snorkel-detection radar to detect aircraft and developed the first operational bespoke AEW aircraft with Project Cadillac. That radar would remain in service on the RAF's Shackleton AEW2 until 1991 when it was replaced by the Boeing E-3D Sentry AEW1 in RAF Service. In the intervening period, many attempts to produce an AEW system for use over land failed, until the E-3 Sentry came on the scene in the late 1970s. This became the benchmark for AEW aircraft and is only now being replaced by Boeings E-7 Wedgetail. On the maritime front, Grumman's E-2 Hawkeye became a popular choice, especially once an overland capability was achieved in the 1980s. The Royal Navy's loss of ships in the South Atlantic prompted the resurrection of earlier work on a helicopter AEW system that became the Sea King ASaC7 and today's Merlin Crowsnest operated from the Queen Elizabeth-class aircraft carriers. Elsewhere, the Soviets produced the Moss, based on the Tupolev Bear via the Cleat airliner but the subsequent Beriev A-50 Mainstay has become the AEW platform of choice in non-aligned countries such as India. China has taken the bit between its teeth and having bought a few Mainstays, has developed a plethora of AEW aircraft in the last 20 years. Due to the massive power requirements of radars and their associated computers, AEW aircraft were large, generally converted airliners. Since the mid-1990s a new generation of smaller types based on feeder liners and bizjets have appeared and make the role accessible to smaller air forces. In the vanguard of this is SAAB, whose Erieye systems have been applied to a variety of aircraft.

The Dragon's Teeth Benjamin Lai, 2016-07-14 An in-depth look at the past, present, and future of China's military. When Mao Zedong proclaimed the People's Republic of China in 1949, China was a poor and wrecked society after years of continuous wars. For centuries, in fact, China had been seen as a sort of plunder-zone to be invaded, and then a backwater until the late 1980s—when domestic policy brought about monumental changes. The result is that China has grown to be the second largest economy in the world, and its military has grown proportionately. Successive decades of economic growth have transformed China—in addition to the weapons revolution during the computer age—so that the People's Liberation Army (PLA) has become a modern fighting force. No longer having to rely on massed infantry attacks, it now features a formidable arsenal, including nuclear submarines, ICBMs, stealth fighters, and modern battle tanks. Perhaps ominously for other maritime powers, the Chinese have also focused on beyond-the-horizon missile technology, as well as antiaircraft systems, and have explored the possibilities of cyber-warfare. What is today's PLA really like? What are its traditions and histories, and how is it armed and equipped? How does it recruit and train? This book describes some of the lesser-known battles and wars the Chinese have undertaken and the development of their key weapons systems. The United States, having opened the door to drone warfare, has had an attentive audience for such technologies in Beijing. The last chapter provides thoughts on how the Chinese view matters of security. It is not yet known whether foreign powers can still enforce their territorial wills on China—but future attempts will meet an increased challenge.

China's Military Faces the Future James Lilley, David L. Shambaugh, 2016-07-01 This is the most up-to-date assessment of all aspects of the People's Liberation Army. Leading specialists on the Chinese military cover military leadership, defense doctrine and military readiness, preparations for high-tech warfare, military expenditure, military logistics, the scientific and technological base for defense procurement, and China's security concerns in Northeast Asia.

100 Years of Radar Gaspare Galati, 2015-09-15 This book offers fascinating insights into the key technical and scientific developments in the history of radar, from the first patent, taken out by Hülsmeyer in 1904, through to the present day. Landmark events are highlighted and fascinating insights provided into the exceptional people who made possible the progress in the field, including the scientists and technologists who worked independently and under strict secrecy in various countries across the world in the 1930s and the big businessmen who played an important role after World War II. The book encourages multiple levels of reading. The author is a leading radar researcher who is ideally placed to offer a technical/scientific perspective as well as a historical one. He has taken care to structure and write the book in such a way as to appeal to both non-specialists and experts. The book is not sponsored by any company or body, either formally or informally, and is therefore entirely unbiased. The text is enriched by approximately three hundred images, most of which are original and have been accessed by detailed searches in the archives.

The Little Book of Aviation Norman Ferguson, 2013-05-01 The Little Book of Aviation is a collection of facts, figures and interesting stories from the world of flight. Sad, humorous, baffling and astounding stories abound, from the pioneering days of the Wright Brothers to the present day, and covering everything from great milestones, famous names who've served, and the greatest of aircraft icons; phantom pilots and aircraft and a glossary of slang; the origins of plane-spotting and unusual aircraft names; great feats and enduring mysteries; lucky escapes and great aircraft in the movies... the trivia is limitless and will appeal to everyone, whether you want help telling your Spitfire from your Messerschmitt or you know a Spitfire I from a Spitfire II!

The Modern Weaponry of the World's Armed Forces Col. Y Udaya Chandar (Retd.), 2017-04-24 The Modern Weaponry of the World's Armed Forces is a treatise of military weaponry. It depicts about forty present-day weapon systems possessed by various nations, describing three to four weapons of each category with images, specifications, origin, development and design briefly. The weapon systems presented are almost all from the twenty-first century or the weapons presently under development. Only a very few officers in the three services know the finer distinctions between, say, cruise missile and ballistic missile, fourth generation jet fighter and fifth generation jet fighter and howitzer and a field gun. All such nuances are explained clearly. The beginning explains the 'history of military weapons' briefly and ends with information on the missile shield erected by most countries including India. The missile shield destroys the hostile incoming aircraft or missile

automatically. The missile shield presented is real, exists on the ground today and not fictitious. The militaries win the war with the help of the man who stands erect in the face of the enemy fire and the weapon that is in his hands. All the students of military science must read this invaluable book about the gun in the hands of a soldier, what exactly it is and how much it matters.

Jane's All the World's Aircraft ,2001

Green Consciousness Rising G. D. Bakshi, 2004 Green ideology.

Tupolev TU-22 Sergey Burdin, 2005-11-17 This historic Russian aircraft was first delivered to the Soviet Air Force at the height of the Cold War in 1961. It remained in service until replaced by the much modified Tu-22M Backfire which was introduced in the early 1970s and still remains in service. It was the first Soviet supersonic bomber and was used for reconnaissance and bombing, in the latter role carrying either conventional or nuclear bombs. The early aircraft had a range of 1,800 miles but later models had a much increased radius of action through the introduction of in-flight refuelling. This book looks at the design and development of the aircraft up to the introduction of the type M Backfire. Details of construction, weapon systems, photo-reconnaissance and jamming equipment are included to cover the several variant models. Operational use is explained and the text includes many first-hand accounts from Russian aircrew of the period. The book will be superbly illustrated by unique official photographs and manuals.

War Against Islam George P. Robertson, 2008-06 This novel is a fictional depiction of the rise of a right-wing Presidential candidate who wins the 2008 election, takes measures to reduce American dependence on Middle Eastern oil and then wages unfettered war on Islamic nations. The story weaves imagination and reality. There are many references to current and historical events. The principal characters resemble actual politicians and world leaders. Astute readers will be able to make the necessary connections, if

they so wish. Nonetheless, the fictional equivalents are probably more extreme than similar figures in the real world. Accomplished authors of political thrillers, as well as television shows such as 24, usually venture to the brink then retract. This book goes beyond the precipice, that's what makes it unique.

Air Force Magazine ,2015-07

In Cold War Skies Michael Napier,2020-08-20 Throughout the second half of the 20th century, international relations across the globe were dominated by the Cold War. From 1949 until the fall of the Berlin Wall in 1989, US and Soviet strategic forces were deployed across the Arctic Ocean in North America and Northern Russia, while the best-equipped armed forces that the world had ever seen faced each other directly across the 'Iron Curtain' in Europe. In Cold War Skies examines the air power of the major powers both at a strategic and at a tactical level throughout the 40 years of the Cold War. In this fascinating book, acclaimed historian Michael Napier looks at each decade of the war in turn, examining the deployment of strategic offensive and defensive forces in North America and Northern Russia as well as the situation in Europe. He details the strategic forces and land-based tactical aircraft used by the air forces of the USA, USSR, NATO, Warsaw Pact countries and the European non-aligned nations. He also describes the aircraft types in the context of the units that operated them and the roles in which they were used. The text is supported by a wide range of first-hand accounts of operational flying during the Cold War, as well as numerous high-quality images.

Soviet Aircraft Industry Peter G Dancey,2017-04-22 Soviet aircraft industry was an essential part of the USSR's campaign for global dominance in the twentieth century. Thanks to the thick fog of secrecy that enveloped it throughout the Cold War, it has long inspired the fascination of analysts and enthusiasts in the West; until the collapse of the USSR in 1991, details of Soviet aircraft were often a matter of conjecture. This book aims to uncover fully the mystery surrounding this topic. Drawing on original and previously unpublished information obtained directly from the former USSR, Soviet Aircraft Industry examines the unique characteristics of Soviet-designed aircraft—particularly military types, which were the cause of great concern to the West. Further, by virtue of the industry's central role throughout Soviet history, this book provides a rare and important perspective into the broader theme of Russia's great communist experiment.

Air Power in the Indian Ocean and the Western Pacific Howard M.

Hensel,2020-06-04 This book examines the security dynamics of the Indian Ocean and the Western Pacific, concentrating upon an analysis and evaluation of the air power capabilities of the various powers active in the two regions. The volume is designed to help improve understanding of the heritage and contemporary challenges confronting the global community in the Indian Ocean and the Western Pacific, as well as to illuminate the policies of the various powers involved in the affairs of these regions, and the military capabilities that are available in support of those policies. The 16 individual chapters examine both the traditional and the non-traditional threats that confront the various Indian Ocean and Western Pacific powers, and assess the roles played by land-based and naval, fixed-wing and rotary-wing, manned and unmanned aircraft, as well as by offensively and defensively capable ballistic and cruise missiles in addressing these challenges. In doing so, the various chapters analyze and evaluate the air power doctrine, capabilities, deployment patterns, and missions of the respective states. In addition, they assess the future issues, challenges, and responses involving air power as it, acting in concert with other military instruments, seeks to contribute to securing and promoting the interests of the state. This book will be of much interest to students of air power, strategic studies, Asian and Middle Eastern politics, and International Relations.
