

Binocular

Gary Seronik

Binocular Astronomy Stephen Tonkin, 2013-08-15

Binoculars have, for many, long been regarded as an “entry level” observational tool, and relatively few have used them as a serious observing instrument. This is changing! Many people appreciate the relative comfort of two-eyed observing, but those who use binoculars come to realize that they offer more than comfort. The view of the stars is more aesthetically pleasing and therefore binocular observers tend to observe more frequently and for longer periods. “Binocular Astronomy”, 2nd edition, extends its coverage of small and medium binoculars to large and giant (i.e., up to 300mm aperture) binoculars and also binoviewers, which brings the work into the realm of serious observing instruments. Additionally, it goes far deeper into the varying optical characteristics of binoculars, giving newcomers and advanced astronomers the information needed to make informed choices on purchasing a pair. It also covers relevant aspects of the physiology of binocular (as in “both eyes”) observation. The first edition of this title was praised for its suggested objects for observation and especially for the finder charts for each object. In this second edition, this section is expanded in three ways. There are new objects, with more information on each object, and a re-organization of the objects for binoculars for easier selection for readers. “Binocular Astronomy” 2nd Edition puts an emphasis on understanding binoculars and their use. The additional content in this second edition reflects the latest developments in technology, available testing techniques, and practical ideas for binocular use. It also responds to the substantially positive reviews of the first edition, and is now even better suited to its target readership.

Binocular Highlights Gary Seronik, 2017 Binocular

Highlights is a tour of 109 different celestial sights--from softly glowing clouds of gas and dust to unusual stars, clumps of stars, and vast star cities (galaxies)--all visible in binoculars. Each object is plotted on a detailed, easy-to-use

star map, and most of these sights can be found even in a light-polluted sky. Also included are four seasonal all-sky charts that help locate each highlight. You don't need fancy or expensive equipment to enjoy the wonders of the night sky. In fact, as even experienced stargazers know, to go beyond the naked-eye sky and delve deep into the universe, all you need is a pair of binoculars--even the ones hanging unused in your closet. If you don't own any, *Binocular Highlights* explains what to look for when choosing binoculars for stargazing and provides observing tips for uses of these portable and versatile mini-telescopes.

Touring the Universe through Binoculars Philip S. Harrington, 1990-10-01 This comprehensive work takes you on a personal tour of the universe using nothing more than a pair of binoculars. More comprehensive than any book currently available, it starts with Earth's nearest neighbor, the moon, and then goes on to explore each planet in the solar system, asteroids, meteors, comets and the sun. Following this, the reader is whisked away into deep space to explore celestial bodies including stars that are known and many sights less familiar. The final chapter includes a detailed atlas of deep-sky objects visible through binoculars. The appendices include guidance on how to buy, care for and maintain astronomical binoculars, tips and hints on using them, and detailed information on several home-made binocular mounts.

Binocular Vision Edith Pearlman, 2023-08-03 'The best short story writer in the world' Susan Hill 'This book is a spectacular literary revelation' Sunday Times The collected stories of an award-winning, modern classic American writer who has been compared to Alice Munro, John Updike - and even Anton Chekhov Tenderly, incisively, Edith Pearlman captured life on the page like no one else. Spanning forty years of writing, moving from tsarist Russia to the coast of Maine, from Jerusalem to Massachusetts, these astonishing stories reveal one of America's greatest modern writers. Across a stunning array of scenes-an unforeseen love affair between adolescent cousins, an elderly couple's decision to shoplift, an old woman's deathbed confession of her mother's affair-Edith Pearlman crafts a timeless and unique sensibility, shot through with wit, lucidity and compassion. Part of the Pushkin Press Classics series: timeless storytelling by icons of literature, hand-picked from around the globe Edith Pearlman (1936-2023) published her debut collection of stories in 1996, aged 60. She won The National Book Critics Circle Award for Fiction for *Binocular Vision*. She published over 250 works of short fiction in magazines, literary journals, anthologies and online publications. Her work won three O. Henry Prizes, the Drue Heinz Prize for Literature, and a Mary McCarthy Prize, among others. In 2011, Pearlman was the recipient of the PEN/Malamud Award, which put her in the ranks of luminaries like John

Updike and Joyce Carol Oates.

BINOCULARS: Fallacy and Fact William J.

Cook, 2017-08-30 Decades of experience concentrated into the highest possible SNR. - Stephen F. Tonkin, Author
Binocular Astronomy Bill Cook is a seasoned optical professional who has perfected 'everything binocular' with his no nonsense approach to straightening the curves of understanding concerning them. With an unmatched writing style, his vignette on Collimation vs. Conditional Alignment is spot on! - Gail Fisher, Repair Manager, Swarovski Optik I have gone through your book and I am amazed - it should be printed asap! It was not only fun to read, but also highly educational and absolutely worth studying, even for the experienced binocular user. - Holger Merlitz, Professor of Theoretical Physics and Astrophysics, Xiamen University, Xiamen, Fujian, PR China. This is an important book and one that should be read by engineers, binocular users, collectors, dealers, and manufacturers. - Paul R. Yoder, Fellow Member of SPIE and OSA, Co-Author Field Guide to Binoculars and Scopes Written for any serious user, Binoculars: Fallacy & Fact provides a fascinating look at the world of binoculars by someone who knows binoculars inside and out. And when I say inside, I mean truly inside as Bill Cook has spent his career adjusting and repairing binoculars. Bill knows his stuff and he is not afraid to clarify the facts and to share his honest opinions with us. The book comes across as a casual conversation making it an easy read but chock-full of information illuminated by personal anecdotes. - John E. Greivenkamp, Professor, College of Optical Sciences, University of Arizona Going through the US Navy Opticalman A School with Bill, serving with him aboard USS Grand Canyon, and later working with him at

Captain's Nautical Supplies in Seattle, I can attest that you'll not find a man more passionate or knowledgeable about optics and binoculars. Any odd-ball questions asked by the novice or self-proclaimed expert are quickly answered in a straight-forward and accurate manner. This book goes well beyond the ever-regurgitated numbers and gets into the facts of how it all works. - Cory A. Suddarth, President, Suddarth Optical Repair When it comes to optics, think Bill Cook. I have known him for several decades and his credentials are as strong as they come. When a question arises that I am unsure of, he is one of the first to be called on among the dozen or so experts I trust. Bill is not out to protect brands and factories when they continually mislead consumers about their products. Instead, he tells it like it is - straight and honest - even when manufacturers get upset when they hear the truth. This book will not only be helpful for those thinking about purchasing a binocular, but also those who want to learn more about the instrument they have now. - Alan Hale has served as C.E.O. and President of Celestron and is currently Chairman Emeritus of the company. Alan is the author of Sport Optics - Binoculars, Spotting Scopes, and Riflescopes

The Binocular Stargazer Leslie C. Peltier,1995 A guidebook for beginners who wish to observe the night sky with binoculars.

Binoculars and All Purpose Telescopes Henry E. Paul,Greg Stone,1980 Describes the structure and special features of a variety of binoculars and telescopes and discusses the use of these instruments for studying birds, stars, architecture and in other activities.

Building and Using Binoscopes Norman Butler,2017-10-03 Covering both homemade and commercial products, this book provides the reader with

simple and straightforward information about the modeling, building, and use of binoscopes. Binoscopes can be thought of as binoculars enlarged to the size of telescopes - essentially, a combination of the two. Constructing a binoscope is easier than most people think, but it still demands attention to detail and proper background knowledge. The author goes on to provide additional information about the products currently on the market, should the reader choose to purchase one instead of building it. Lastly, the book also compares binoscopes with telescopes in great detail, outlining the differences the reader can expect to see in the night sky from using both. The celestial views obtained with a binoscope, compared to a single telescope of the same aperture, are a very different experience. The new edition emphasizes the obvious advantages of viewing celestial objects through a binoscope. There are also many new photos and additional information on the latest equipment and some very special and rare equipment a collector might be interested in. Newly added cartoons and additional images of beautiful deep sky objects in each of the chapters makes reading the book a more enjoyable experience. Finally, there is a new comet discovery form and guide to follow for such discoveries, and a complete list of Messier objects for those interested in searching for these.
