Inhaltsangabe:Abstract: The story of the automobile manufacturer production can not be told without the story of Henry Ford, who was one of the pioneers constructing his first horseless carriage in 1896. He incorporated the Ford Motor Company in 1903, proclaiming I will build a car for the great multitude . As predicted he did so in 1908 offering a Model T for \$ 950. This model heralds the beginning of the motor age. The car evolved from a former luxury item for the well-to-do to essential transportation for the ordinary man. Ford also revolutionized automobile manufacturing, in 1914 the Ford plant used innovation production techniques and was able to turn out a complete chassis every 95 minutes. That was a revolution in the automobile manufacturing at the time, because the former production time took about 730 minutes to turn out a complete chassis! Ford achieved that fast production time by using a constantly moving assembly line, subdivision of labor, careful coordination of operations and he began to pay nearly double the wages offered by their competitors. His innovations made him an international celebrity in the industrial revolution and he was one of the first who thought about effective organization to achieve a higher productivity. Ford s

methods that changed the automobile production were perhaps not mainly the introduction of the assembly line, his goal was also to constantly standardizing the use of craftsmen. That firstly resulted in a high product variety despite in fact that they had been made using the same drawing. Secondly a lot of time was spent in fitting the parts together. These facts influenced major loss in productivity and under such circumstances a real mass-production was not possible. But by standardizing components and developing work routines was the first scope for an assembly line approach. The target of our case study is to present and analyze the changes in companies organizations, applied to the example of BMW. The opening part will summarize the history of the working and organizing techniques in general. The middle part will focus on the changes in production organization in the automotive industry, followed by the last part analyzing new strategies in Sales & Marketing regarding the rebirth of MINI by the BMW Group. Mini-RC-Cars Hans-Peter Sollik, In 1987, the first Mini-Z models came onto the market, small remote-controlled car models for racing fun (not only) in your own living room. Since then, the mini-RC cars in 1:24 scale and smaller, especially as ready-to-run models, have offered an inexpensive entry into sophisticated car modelling. In this book, Hans-Peter Sollik presents five selected models, from monster trucks to Formula 1 racers, showing the construction and possible uses of these smart RC cars. What is included in the usual scope of delivery, which motor, and chassis equipment can be considered, which battery technology and which remote control components, are described by the author as well as the wide range of optical and technical improvements: tuning. Anyone who wants to get to know RC car modelling and gain initial experience with miniature models, perhaps in order to switch to larger scales later, will find the right instructions in this book.
