IBP USA

Boeing 737 Graham M. Simons, 2021-03-15 An in-depth history of the controversial airplane, from its design, development and service to politics, power struggles, and more. The Boeing 737 is an American short- to medium-range twinjet narrow-body airliner developed and manufactured by Boeing Commercial Airplanes, a division of the Boeing Company. Originally designed as a shorter, lower-cost twin-engine airliner derived from the 707 and 727, the 737 has grown into a family of passenger models with capacities from 85 to 215 passengers, the most recent version of which, the 737 MAX, has become embroiled in a worldwide controversy. Initially envisioned in 1964, the first 737-100 made its first flight in April 1967 and entered airline service in February 1968 with Lufthansa. The 737 series went on to become one of the highest-selling commercial jetliners in history and has been in production in its core form since 1967; the 10,000th example was rolled out on 13 March 2018. There is, however, a very different side to the convoluted story of the 737's development, one that demonstrates a transition of power from a primarily engineering structure to one of accountancy, number-driven powerbase that saw corners cut, and the previous extremely high safety methodology compromised. The result was the 737 MAX. Having entered service in 2017, this model was grounded worldwide in March 2019 following two devastating crashes.? In this revealing insight into the Boeing 737, the renowned aviation historian Graham M. Simons examines its design, development and service over the decades since 1967. He also explores the darker side of the 737's history, laying bare the politics, power-struggles, changes of management ideology and battles with Airbus that culminated in the 737 MAX debacle that has threatened Boeing's very survival.

Strategic Management and Policy in the Global Aviation Industry Kurnaz, Salim, Rodrigues, Antonio, Padhra, An?l, 2024-04-09 The aviation industry presents a unique conundrum with the complex relationship between government oversight and business management. While the aviation industry operates in a business-oriented manner, a considerable number of aviation companies and airports worldwide are still government-

owned. The COVID-19 pandemic has accentuated the pivotal role of governments in the industry, highlighting the need for a comprehensive understanding of this interaction, given the sector's massive economic influence and the extensive investment required. The need for an in-depth exploration of this liaison has never been more pressing. Flying Blind Peter Robison, 2022-10-11 NEW YORK TIMES BUSINESS BEST SELLER • A suspenseful behind-the-scenes look at the dysfunction that contributed to one of the worst tragedies in modern aviation: the 2018 and 2019 crashes of the Boeing 737 MAX. An authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies (New York Times Book Review), from the award-winning reporter for Bloomberg. Boeing is a century-old titan of industry. It played a major role in the early days of commercial flight, World War II bombing missions, and moon landings. The planemaker remains a cornerstone of the U.S. economy, as well as a linchpin in the awesome routine of modern air travel. But in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes

exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company's history—and one of the costliest corporate scandals ever. How did things go so horribly wrong at Boeing? *Flying Blind* is the definitive exposé of the disasters that transfixed the world. Drawing from exclusive interviews with current and former employees of Boeing and the FAA; industry executives and analysts; and family members of the victims, it reveals how a broken corporate culture paved the way for catastrophe. It shows how in the race to beat the competition and reward top executives, Boeing skimped on testing, pressured employees to meet unrealistic deadlines, and convinced regulators to put planes into service without properly equipping them or their pilots for flight. It examines how the company, once a treasured American innovator, became obsessed with the bottom line, putting shareholders over customers, employees, and communities. By Bloomberg investigative journalist Peter Robison, who covered Boeing as a beat reporter during the company's fateful merger with McDonnell Douglas in the late '90s, this is the story of a business gone wildly off course. At once riveting and disturbing, it shows how an iconic company fell prey to a win-at-all-costs mentality, threatening an industry and endangering countless lives.

Low-Cost Carriers in Emerging Countries John

Bowen, 2019-02-15 *Low-Cost Airline Carriers in Emerging Countries* traces the development of low-cost carriers (LCCs) in Asia, Latin America, the Middle East and Africa, examining airlines that have become significant players in their home markets but little known at a global scale. The book maps the geography of the LCC phenomenon, explaining the starkly varying success of budget airlines, and assessing their current social, economic and environmental impacts. The book concludes with insights into the future potential of the LCC phenomenon along with its global ramifications. Beginning with Southwest Airlines in the 1970s, low-cost carriers (LCCs) have democratized

air travel around the world, fostering huge increases in airline traffic and transforming the airline industry. At the same time however, the ascent of these budget airlines has exacerbated aviation-related problems such as aircraft noise, airport congestion, greenhouse gas emissions and more. LCCs have been extensively studied in the US and Europe but not in emerging regions of the globe. Yet the impact of such airlines is greatest in low- and middle-income economies where only a small fraction of the population has ever flown, and where competition from alternative modes (road, rail) is weak. Examines the evolution of low cost carriers around the world, how established airlines react to their entry and the wide-ranging societal implications for individual countries and the world Places emerging countries' LCCs into a global context, comparing them to their US and European counterparts Offers original quantitative analysis of LCC networks at several spatial scales (global, regional, national, airport vs. airport) using global schedule data from OAG Includes professionally produced maps of representative airlines networks

The Changing Structure of the Global Large Civil Aircraft Industry and Market, 1998

The Economic Geography of Air Transportation John T. Bowen, 2010-04-05 Like the railroad and the automobile, the airliner has changed the very geography of the societies it serves. Fundamentally, air transportation has helped redefine the scale of human geography by dramatically reducing the cost of distance, both in terms of time and money. The result is what the author terms the 'airborne world', meaning all those places dependent upon and transformed by relatively inexpensive air transportation. The Economic Geography of Air Transportation answers three key questions: how did air transportation develop in the century after the Wright Brothers, what does it mean to live

in an airborne world, and what is the future of aviation in this century? Examples are drawn from throughout the world. In particular, ample consideration is given to the situation in developing countries, where air transportation is growing rapidly and where, to a considerable degree, the future of the airborne world will be determined. The book weaves together the technological development of aviation, the competition among aircraft manufacturers and their stables of airliners, the deregulation and privatization of the airline industry, the articulation of air passenger and air cargo services in everyday life, and the challenges and controversies surrounding airports. It will be of particular interest to students and researchers in air transport history, the geography of the airline industry, air transport technological development, competition in the commercial aircraft industry, airport development, geography and economics. It will also be useful to professionals working in the airline, airport, and aircraft manufacturing industries.
