

Boeing B 29 Superfortress

John Pimlott

Boeing B-29 Superfortress William Wolf, 2005 Although many books have been published about the B-29, none has been an in-depth look, with most being either superficial pictorials or focusing on the bombing campaigns, particularly the incendiary attacks and atomic bombings. This book, using rare, previously unexplored sources, intends to provide the definitive look at the bomber and crew, detailing every facet for the air enthusiast, historian and modeler. The author was granted rare access to the Pima Air & Space Museum's restored B-29 Sentimental Journey for inspection and photography, resulting in the most extensive photographic documentation of the B-29 ever published. The Pima Museum's archives, filled with B-29 technical and crew manuals also gave the author extensive information that had not been previously published. These sources, the author's extensive personal library, and microfilm resources enabled the author to produce this comprehensive look at the bomber and its crew in the context of the bomber's development and operational use. It is truly monumental in scope, both in words and photos.

Superfortress Curtis E. LeMay, Bill Yenne, 2006 The Complete Story of the Design, Development, and Deployment of an Iconic Aircraft Among the most sophisticated aircraft flown during World War II, the Boeing B-29 Superfortress was designed to replace the B-17 as the primary long-range bomber of the U.S. Army Air Forces. With its distinctive glazed nose and long, thin wings that provided both speed at high altitude and stability at takeoff and landing, the Superfortress was the first operational bomber with a pressurized crew cabin and featured advanced radar and avionics. Armed with remote-controlled machine gun turrets and a 20,000 pound bomb load, it was the first USAAF bomber capable of mastering the vast distances of the Pacific Theater of World War II. The prototype flew in September 1942 but a series of post-production modifications delayed the bomber's first mission until April 1944. Superfortresses began

attacking Japan in daylight with conventional ordnance from high altitude, but their mission was redirected in March 1945, with massive low-level formations dropping incendiary bombs! at night on Japanese cities. The ensuing firestorms, followed by the complete destruction of Hiroshima and Nagasaki by atomic bombs dropped from two specially modified silverplate B-29s, forced Japan to cease fighting. Written by the man who led the B-29 into combat, *Superfortress: The Boeing B-29 and American Airpower in World War II* is an important document of one of the most turbulent times in world history. General Curtis LeMay recalls the early debate about whether or not the United States needed a long-range bomber, how the B-29 was created and produced despite the enormous logistical difficulties of the design, and the decision to conduct fire-bombings against Japan and ultimately drop the atomic bomb. Highly praised when it was first published, this new edition is complete with photographs, a new introduction, and statistical tables.

The B-29 Superfortress Chronology, 1934-1960 Robert A. Mann, 2010-01-19 The Boeing B-29 Superfortress lived an operational life of only 26 years, but what a life it was. The introduction to this book provides basic information on the physical plane: dimensions, specs, leading particulars and operational usages. Then an exhaustive day-by-day chronology of the B-29 is presented—from the earliest designs in 1934 through thousands of missions and aircraft events in World War II and Korea to the 1960 retirement of the last operational B-29. The book also includes an extensive glossary and three appendices, which provide a discussion of the general anatomy of a mission, a sample of operational voice or radio codes used in 1945, and a guide to (very unofficial) aircraft names.

Boeing B-29 Superfortress Mantelli - Brown - Kittel - Graf, 2019-02-08 The Boeing B 29 Superfortress will be remembered as the apparatus to have made use of the atomic weapon in war action; in fact, airplanes of this type that dropped

the atomic bombs on Hiroshima and Nagasaki to force Japan to surrender in August 1945. Apart from that, however, the Boeing B 29 was an excellent aircraft, with avant-garde features, including turrets with automatically maneuverable weapons at a distance and pressurized compartments for the crew. The American interest in a bomber capable of carrying a considerable offensive load over long distances and at high speeds dates back to the Boeing XB 15 of 1933. Although in the second half of that decade, the interest in such a weapon fades, Boeing continued to elaborate the design of similar projects, culminating in the 341 model, which was believed to be capable of carrying a cargo of 2,240 pounds (just over 1,000 kg) of bombs with a flight range of 7,000 miles (11,265 km) at a speed of over 400 miles/h (644 km/h). However, with the outbreak of World War II in Europe and the possibility of a forthcoming American involvement in it, the US Air Force Corps (USAC) again showed interest in any weapon that would put the United States in the possibility of bombing the enemy even at very great distances. So in February 1940, the request was made of the so-called Hemisphere Defense Weapon (weapon for the defense of the hemisphere), namely a bomber capable of transporting 2,000 pounds (907 kg) of bombs over a distance of 5,333 miles (8,600 km) at a speed of 400 miles / h (644 km/h). The bomber should have also self-supporting tanks, good armored protection, heavy defensive armament and a chance to transport 16,000 pounds (7,250 kg) of offensive cargo.

B-29 Superfortress: The Plane that Won the War Gene Gurney, 2019-07-23 B-29 Superfortress: The Plane that Won the War is the definitive work on the crucial role played by the Boeing B-29 Superfortress during World War II. Author Gene Gurney takes the reader from the super plane's inception, test flights and production to its combat deployments and its ultimate purpose of dropping the atomic bombs on Hiroshima and Nagasaki.

The B-29 Superfortress Robert A. Mann, 2015-07-11 The B-29 Superfortress was for many years a cornerstone of American

military aviation. Best known as a bomber, it also served in reconnaissance, as a tanker, and as a rescue plane. It was a crucial tool for American and Allied forces during World War II, Korea and beyond. This operational history of the B-29 gives in-depth information on the career of each plane. A list of the names and serial numbers of the planes, each plane's history from delivery date to removal from service, a description of the B-29's physical characteristics and performance parameters, and a description of the five B-29 variants are provided. Sections of the book give complete mission data for the B-29's World War II service in the China-Burma-India theater of operations, operations over Japan, aerial mining missions and test atomic bombing runs.

Superfortress Curtis E. LeMay, Bill Yenne, 1988

B-29 Superfortress Units of World War 2 Robert F Dorr, 2012-12-20 The ultimate piston-engined heavy bomber of World War 2, the first production B-29s were delivered to the 58th Very Heavy Bomb Wing in the autumn of 1943. By the spring of 1944 the Superfortress was bombing targets in the Pacific, and by war's end the aircraft had played as great a part as any weapon in ending the conflict with the Japanese. Indeed, the final dropping of two atomic bombs from the B-29 convinced the Japanese to sue for peace. This book traces the wartime career of the B-29, as the aircraft went from strength to strength in the Pacific Theatre.

Boeing B-29 Superfortress Ben Skipper, 2023-06-01 The B-29 Superfortress was the definitive expression in piston-powered offensive air power. It was designed for an air force that was slowly realizing it needed larger and heavy aircraft to support its operations, especially in the Pacific. Riding on the waves made by the equally ground breaking B-17, the B-29 was a bigger, more capable and more complex platform which incorporated myriad lessons learned from the European air war. It was soon decided to utilize the B-29's exceptional range of

3,250 miles in the Pacific Theater, where its payload would go on to wreak havoc among the forces of Imperial Japan. As well as military targets, the B-29s of the specially formed 20th Air Force would strike hard against the Japanese home islands, initially from bases in India and China, before following on behind MacArthur's push towards Japan. It was from the island of Tinian that B-29s would drop atomic bomb over the cities of Hiroshima and Nagasaki. The B-29 was a genuine behemoth of the skies, and its flight endurance would see its ten-man crew provided with rest bunks, remotely operated defensive guns and a tunnel linking the front and rear of the aircraft. It was also tough, capable of using the most basic landing strips, providing they were long enough. As a new aircraft it presented both new and converting pilots with a challenge, notwithstanding the B-29's high-wing loading. From flying the large aircraft to operating its many systems, the B-29 was as complex as it was large, and each member of the ten-man crew had to know their role and perform it flawlessly to ensure operational efficiency. In the post-war era the B-29 was retained by the USAAF and, from 1948, the USAF as the primary strategic bomber. Indeed, the B-29's fighting days were far from over and it would go on to see action over the skies of Korea. It would also supplement the Royal Air Force's bomber capacity while Bomber Command awaited the arrival of the Canberra and its next generation of jet-powered V-bombers. The B-29 has more than earned its place in the halls of aviation fame. It was an aircraft ahead of its time that helped usher in a new age of military aviation and provided a tangible bridge between new and old ways.

B-29 Superfortress Graham M. Simons, 2012-09-19 "A well written history of a history-changing aircraft," the bomber that carried the two atomic bombs that destroyed Hiroshima and Nagasaki in WWII (Aeromilitaria). The Boeing B-29 Superfortress was a four-engined heavy bomber flown primarily by the United States in World War Two and the Korean War. The name

“Superfortress” was derived from that of its well-known predecessor, the B-17 Flying Fortress. The B-29 was the progenitor of a series of Boeing-built bombers, reconnaissance aircraft, trainers and tankers including the variant, B-50 Superfortress. The B-29 was one of the largest aircraft to see service during World War Two. A very advanced bomber for its time, it included features such as pressurized cabins, an electronic fire-control system and remote-controlled machine-gun turrets. Though it was designed as a high-altitude daytime bomber, in practice it actually flew more low-altitude nighttime incendiary bombing missions. It was the primary aircraft in the American firebombing campaign against Japan in the final months of World War Two. Unlike many other World War Two-era bombers, the B-29 remained in service long after the war ended, with a few even being employed as flying television transmitters. The type was finally retired in the early 1960s, with 3,960 aircraft in all built. Without doubt there is a clear, strong requirement to “put the record straight” using primary source documentation to record the undoubted achievements alongside and in context with the shortcomings to the type’s design and operation that have otherwise received scant attention. The book covers all variants and is profusely illustrated.
