Lillian Boxfish Takes a Walk Kathleen Rooney, 2017-01-17 NOW A NATIONAL INDIE BESTSELLER “Transporting...witty, poignant and sparkling.” —People (People Picks Book of the Week) “Prescient and quick....A perfect fusing of subject and writer, idea and ideal.” —Chicago Tribune “Extraordinary...hilarious...Elegantly written, Rooney creates a glorious paean to a distant literary life and time—and an unabashed celebration of human connections that bridge past and future. —Publishers Weekly (starred and boxed) Rooney's delectably theatrical fictionalization is laced with strands of tart poetry and emulates the dark sparkle of Dorothy Parker, Edna St. Vincent Millay, and Truman Capote. Effervescent with verve, wit, and heart, Rooney's nimble novel celebrates insouciance, creativity, chance, and valor. —Booklist (starred review) “In my reckless and undiscouraged youth,” *Lillian Boxfish* writes, “I worked in a walnut-paneled office thirteen floors above West Thirty-Fifth Street...” She took 1930s New York by storm, working her way up writing copy for R.H. Macy's to become the highest paid advertising woman in the country. It was a job that, she says, “in some ways saved my life, and in other ways

ruined it.” Now it’s the last night of 1984 and Lillian, 85 years old but just as sharp and savvy as ever, is on her way to a party. It’s chilly enough out for her mink coat and Manhattan is grittier now—her son keeps warning her about a subway vigilante on the prowl—but the quick-tongued poetess has never been one to scare easily. On a walk that takes her over 10 miles around the city, she meets bartenders, bodega clerks, security guards, criminals, children, parents, and parents-to-be, while reviewing a life of excitement and adversity, passion and heartbreak, illuminating all the ways New York has changed—and has not. A love letter to city life in all its guts and grandeur, *Lillian Boxfish Takes a Walk* by Kathleen Rooney paints a portrait of a remarkable woman across the canvas of a changing America: from the Jazz Age to the onset of the AIDS epidemic; the Great Depression to the birth of hip-hop. Lillian figures she might as well take her time. For now, after all, the night is still young.

Handbook of Research on Aspects and Applications of Incompressible and Compressible Aerodynamics Kumar, Sathish K., Radhakrishnan, Naren Shankar, 2022-06-24 Aerodynamics is a science that improves the ability to understand theoretical basics and apply fundamental physics in real-life problems. The study of the motion of air, both externally over an airplane wing and internally over a scramjet engine intake, has acknowledged the significance of studying both incompressible and compressible flow aerodynamics. The Handbook of Research on Aspects and Applications of Incompressible and Compressible Aerodynamics discusses all aspects of aerodynamics from application to theory. It further presents the equations and mathematical models used to describe and characterize flow fields as well as their thermodynamic aspects and applications. Covering topics such as airplane configurations, hypersonic vehicles, and the parametric effect of roughness, this premier reference source is an essential resource for engineers, scientists, students and educators of higher education, military experts, libraries, government officials, researchers, and academicians.

Bionic Sensing with Artificial Lateral Line Systems for Fish-Like Underwater Robots Guangming Xie, Xingwen Zheng, 2022-08-23 In

this book, the authors first introduce two fish-like underwater robots, including a multiple fins-actuated robotic fish and a caudal fin-actuated robotic fish with a barycenter regulating mechanism. They study how a robotic fish uses its onboard pressure sensor arrays based-ALLS to estimate its trajectory in multiple locomotions, including rectilinear motion, turning motion, ascending motion, and spiral motion. In addition, they also explore the ALLS-based relative position and attitude perception between two robotic fish in a leader-follower formation. Four regression methods—multiple linear regression methods, support vector regressions, back propagation neural networks, and random forest methods—are used to evaluate the relative positions or attitudes using the ALLS data. The research on ALLS-based local sensing between two adjacent fish robots extends current research from one individual underwater robot to two robots in formation, and will attract increasing attention from scholars of robotics, underwater technology, biomechanics and systems, and control engineering.

From Boxfish to Aerodynamic Cars Toney Allman, 2006 Get your students thinking about science, technology, and nature in a whole new way. When DaimlerChrysler engineers searched for an animal model for a biomimetic car, little did they suspect that the ideal creature would be the boxfish. It is a seemingly awkward and clumsy denizen of the coral reefs. Boxfish, however, are surprisingly aerodynamic and share common structure requirements with cars. When the swimming proficiency of boxfish was understood, design engineers adapted its traits to their revolutionary, environmentally-friendly concept vehicle: the Mercedes-Benz Bionic Car. Readers will delight with this fascinating narrative of when nature and technology blend to create better designs.

Field Guide to Drawing & Sketching Animals Tim Pond, 2019-01-02 Artist Tim Pond's lively and engaging book fuses science with art, providing the reader with the skills, techniques and knowledge they need to create sketches of animals filled with life and movement. There are some very good books written on life drawing, yet when it comes to drawing wildlife, illustrators and artists often revert to working solely from photographs, which can leave the artwork looking lifeless and flat. In this inspirational book, artist Tim

Pond shows you how to observe and draw animals in zoos, farms, wildlife parks and aquariums, teaching you some fascinating facts about the animals along the way and ultimately bringing you closer to nature. One of the challenges with sketching wildlife is that animals are constantly moving. However by having some basic understanding of the biology of an animal, such as knowing that a duck has a cheek or that a cheetah can't retract its claws, can influence how you might sketch them, and results in a lively drawing that captures the form, movement and ultimately the spirit of the animal in question.

Combining scientific knowledge with expert practical guidance is key to creating successful drawings of animals, and Tim's ability to convey this in a way that is both accessible and engaging makes this a unique and inspiring guide suitable for artists of all levels. Tim's book takes you on a journey of discovery that will enable you to develop the skills, techniques and knowledge you need to sketch a broad range of wildlife, encompassing mammals, reptiles, birds, fish and insects. It includes quick, gestural sketches as well as linear and tonal studies, in a variety of media - pencil, pen and ink, and watercolour. There are numerous studies comprising how to represent the different patterns of animals' coats, how to capture the plumage of an exotic bird in watercolour, and how to sketch a hippo's hooves, as well as guidance on tools, materials and basic techniques. The result is a treasure chest of fascinating facts, studies, sketches and annotated drawings that will not fail to ignite your enthusiasm for drawing animals from life.

Underwater Vehicles Alexander Inzartsev,2009-01-01 For the latest twenty to thirty years, a significant number of AUVs has been created for the solving of wide spectrum of scientific and applied tasks of ocean development and research. For the short time period the AUVs have shown the efficiency at performance of complex search and inspection works and opened a number of new important applications. Initially the information about AUVs had mainly review-advertising character but now more attention is paid to practical achievements, problems and systems technologies. AUVs are losing their prototype status and have become a fully operational, reliable and effective tool and modern multi-purpose AUVs represent the new class of underwater robotic objects with inherent tasks and practical applications, particular features of technology, systems structure and functional properties.

You Belong to the Universe Jonathon Keats, 2016-03-01 A compelling call to apply Buckminster Fuller's creative problem-solving to present-day problems A self-professed comprehensive anticipatory design scientist, the inventor Buckminster Fuller (1895-1983) was undoubtedly a visionary. Fuller's creations often bordered on the realm of science fiction, ranging from the freestanding geodesic dome to the three-wheel Dymaxion car to a bathroom requiring neither plumbing nor sewage. Yet in spite of his brilliant mind and life-long devotion to serving mankind, Fuller's expansive ideas were often dismissed, and have faded from public memory since his death. *You Belong to the Universe* documents Fuller's six-decade quest to make the world work for one hundred percent of humanity. Critic and experimental philosopher Jonathon Keats sets out to revive Fuller's unconventional practice of comprehensive anticipatory design, placing Fuller's philosophy in a modern context and dispelling much of the mythology surrounding Fuller's life. Keats argues that Fuller's life and ideas, namely doing the most with the least, are now more relevant than ever as humanity struggles to meet the demands of an exploding world population with finite resources. Delving deeply into Buckminster Fuller's colorful world, Keats applies Fuller's most important concepts to present-day issues, arguing that his ideas are now not only feasible, but necessary. From transportation to climate change, urban design to education, *You Belong to the Universe* demonstrates that Fuller's holistic problem-solving techniques may be the only means of addressing some of the

world's most pressing issues. Keats's timely book challenges each of us to become comprehensive anticipatory design scientists, providing the necessary tools for continuing Fuller's legacy of improving the world.
