Briquetting in Metallurgy Aitber Bizhanov,2022-08-18 In the arsenal of ways of carbon consumption and emissions reduction, the main tasks of modern metallurgy, briquetting occupies significant places. Today, briquetting is a cost-effective, industrially mastered technology capable to process natural and anthropogenic materials without their preliminary high-temperature treatment. The book summarizes the scientific research and the practice of briquettes use for the smelting of cast iron, steel, ferroalloys and the production of direct reduced iron. Comparison with sintering and pelletization is given. Particular attention is paid to debunking the myths about briquetting, which are firmly rooted in the minds of metallurgists.

*A review on production, marketing and use of fuel briquettes* Asamoah, Bernice,Nikiema, Josiane,Gebrezgabher, Solomie,Odonkor, Elsie,Njenga, M. ,2016-06-10 Where modern heating and cooking fuels for domestic, institutional, commercial and industrial use are not readily available, briquettes made from biomass residues could contribute to the sustainable supply of energy. This study reviews the briquette making process, looking at the entire value chain starting from the type and characteristics of feedstock used for briquette making to the potential market for briquettes in developing countries. It also analyzes the role that gender plays in briquette production. Depending on the raw materials used and technologies applied during production, fuel briquettes come in different qualities and dimensions, and thus require appropriate targeting of different market segments. Key drivers of success in briquette production and marketing include ensuring consistent supply of raw materials with good energy qualities, appropriate technologies, and consistency in the quality and supply of the briquettes. Creating strong partnerships with key stakeholders, such as the municipality, financiers and other actors within the briquette value chain, and enabling policy are important drivers for the success of briquette businesses.

The authors start reviewing the existing briquetting technologies, providing the reader later on with the specifics of stiff extrusion briquetting technology. Other aspects treated are the applications of extruded briquettes on blast furnace and for the production of manganese ferro alloys. The authors suggest stuff extrusion briquetting technology for direct reduction iron production and list several alternative unconventional applications.
