**Brewing Technology** Makoto Kanauchi, 2017-07-19 Many alcoholic beverages produced using various methods are consumed throughout the world. Alcoholic beverages made by brewing cereals, such as beer and Japanese sake, are extremely popular. Brewing them requires a complicated process by which the cereal must be saccharified using enzymes such as amylase. For example, with beer brewing, malt enzymes are used for saccharification. By germination, malt is made from barley to produce enzymes. Finally, wort is made by processing at higher temperatures using malt. The actual techniques require high-level skills. In this book, the discussion encompasses leading-edge brewing technology with fermentation using a non-Saccharomyces starter, healthy uses of spent grain from brewing processes, and an electronic nose for quality control, but it also includes descriptions of local traditional alcoholic beverages of Korea and Cameroon.

**Battlestar Galactica and Philosophy** Jason T. Eberl, 2011-08-31 What's the point of living after your world has been destroyed? This is one of many questions raised by the Sci-Fi Channel's critically acclaimed series Battlestar Galactica. More than just an action-packed "space opera," each episode offers a dramatic character study of the human survivors and their Cylon pursuers as they confront existential, moral, metaphysical, theological, and political crises. This volume addresses some of the key questions to which the Colonials won't find easy answers, even when they reach Earth: Are Cylons persons? Is Baltar's scientific worldview superior to Six's religious faith? Can Starbuck be free if she has a special destiny? Is it ethical to cut one's losses and leave people behind? Is collaboration with the enemy ever the right move? Is humanity a "flawed creation"? Should we share the Cylon goal of "transhumanism"? Is it really a big deal that Starbuck's a woman?

*Emerging Natural Hydrocolloids* Seyed M.A. Razavi, 2019-02-14 The first guide devoted to the functions, structures, and applications of natural hydrocolloids In today's health-conscious climate, the demand for natural food products is growing all the time. Natural hydrocolloids, therefore, have never been more popular. With their thickening, stabilizing, gelling, fat replacing, and binding qualities, these

naturally occurring, plant-based polymers can fulfil many of the same functions as commercial ingredients like xanthan, guar, gum Arabic, pectin, and starch. Moreover, certain health benefits have been linked with their often biological active compounds and high-fiber compositions, including potential prebiotic effects and the reduction of blood cholesterol levels. Application of these novel hydrocolloids is, however, still underexplored. *Emerging Natural Hydrocolloids* aims to remedy this by providing a thorough overview of their structure–function relationships, rheological aspects, and potential utility in mainly the food and pharmaceutical industries. This accessible, quick-reference guide features: A comprehensive and up-to-date survey of the most significant research currently available on natural hydrocolloids Examinations of the major functions and rheological aspects of novel hydrocolloids Information on the potential applications of biopolymers within both foods and pharmaceutical systems Collaborations from an international team of food scientists *Emerging Natural Hydrocolloids: Rheology and Functions* offers scientists, engineers, technologists, and researchers alike a unique and in-depth account of the uncharted world of novel hydrocolloids, their uses, properties, and potential benefits.

**Student Mobility Since the Expansion of Higher Education in China** Liping Ma, 2023-09-01 Using a nationally representative data set, this book examines the characteristics of Chinese college students' mobility since the expansion of higher education. It analyses college graduates' mobility in both horizontal and vertical dimensions. The horizontal dimension shows college students' migration directions and location changes, including migration for college, migration for employment, migration for grassroots positions, migration away from the capital and migration back to their hometown. The vertical dimension includes students' intergenerational occupational mobility and intergenerational regional mobility. Drawing on theories in education and economics, the book provides a solid framework for empirically analysing the characteristics, causes and economic and non-economic benefits of different forms of mobility. This book not only offers insights into China's higher education policies and their impact on the regional and intergenerational mobility decisions of college graduates over the past two decades but also has important implications for other countries at similar stages of social and economic development. This book is an excellent read for students and scholars of education, economics and East Asian studies. It can also help policymakers understand the characteristics of students' mobility and the underlying reasons for their choices, so that they can propose effective policies in the future.

**His Way** Barry Gustafson, 2013-11-01 This the only authorized biography of New Zealand's prime minister, Robert Muldoon—one of the dominant political figures of the last half-century in that country. Based on many hours of conversation with Muldoon himself as well as colleagues, friends, and family, and wide access to the prime minister's official and private papers and diaries, this book has been awarded the Ian Wards Prize for published historical writing. Muldoon is shown as a champion of the ordinary people whose vision over time became anachronistic and inflexible. The book is also a fascinating picture of New Zealand's changing political landscape from the 1940s to the 1980s.

*The Classifying Spaces for Surgery and Cobordism of Manifolds* Ib Madsen, R. James Milgram, 1979-11-21 Beginning with a general discussion of bordism, Professors Madsen and Milgram present the homotopy theory of the surgery classifying spaces and the classifying spaces for the various required bundle theories. The next part covers more recent work on the maps between these spaces and

the properties of the PL and Top characteristic classes, and includes integrality theorems for topological and PL manifolds. Later chapters treat the integral cohomology of BPL and Btop. The authors conclude with a discussion of the PL and topological cobordism rings and a construction of the torsion-free generators.
