**The British Consular Service in the Aegean and the Collection of Antiquities for the British Museum** Lucia Patrizio Gunning,2016-12-05 The book tells the story of how the British consular service in the Aegean, in the years of the British protectorate of the Ionian Islands (1815-1864) became an agency for the retrieval, excavation and collection of antiquities eventually destined for the British Museum. Exploring the historical, political and diplomatic circumstances that allowed the consular service to develop from a chartered company into a state run institution under the direction of the Foreign Office, it provides a unique perspective on the intersection of state policy, private ambition, and the collecting of antiquities. Drawing extensively on consular correspondence, the study sets out several challenges to current views. For those interested in the history of travel in the Levant, or more generally in the Grand Tour, the book presents an alternative point of view that challenges the travellers' descriptions of the region. The book also intersects with British diplomatic history, providing an insight into the consuls in both their official and private circumstances, and comparing their situation under the Levant Company with that of the Foreign Office run consular service. The complex political situation in the Aegean at the time of the take over of the service is examined along with the political and commercial roles of the consuls, their daily dealings with the Greeks and Ionians, and also with the Ottoman authorities. Through private correspondence, it shows how the consuls' reflected the belief that Greek, Egyptian, Babylonian, Roman and other antiquities would be better looked after in a British, French, German or American museum, than by the people, and in the countries, they were created for. In particular, the book illuminates the public/private nature of the consuls' role, the way they worked with, but independently of, government, and it reveals how Britain was able to acquire major pieces of sculpture from the nineteenth century Aegean.

**Light Tanks** Mikhail Baryatinskiy,2006 It is one of the ironies of Soviet tank development that a country opposed to free enterprise and capitalism was largely reliant on influences from Britain and the USA for many of its early designs. However, unhindered by many of the tactical constraints that affected tank development in the West, the Red Army was able to acquire and develop technology that was under-rated in both Britain and the USA. From Britain, the famous manufacturer Vickers produced a Six-Ton light tank; effectively rejected by the War Office, one example was acquired by the Russians and this formed the basis of the Russian T-26 of 1931. Further British designs also influenced the later light tanks, equipment which was pivotal to the Red Army during its campaigns in Manchuria, Finland and against the initial German assault in 1941. In the USA, Walter Christie was also largely ignored as a designer but, as with Vickers, his designs came to be highly important. His influence was seen in the 'BT' - short for 'Bystrochodri' or 'Fast Tank' - series of light-medium tanks that was first introduced in 1932. The BT series saw service in Spain, Manchuria, Finland and in the defense of Russia itself in 1941. The critical aspect of the Christie design was that the vehicles were capable of operating both with nor without tracks; in the latter case eight road wheels carried the weight of the vehicle, with steering being achieved via a steering wheel acting in conjunction with the clutch/brake system.In the second of the new 'Soviet Tanks' series, Mikhail Baryatinsky provides the reader with a comprehensive account of the development and operational record of Soviet light tanks. Utilizing photographs, line drawings and speciallyprepared artworks, he provides a detailed portrait of these highly successful tanks.Aimed at the modeler, military historian and war gamer, the new 'Soviet Tanks' series is designed to provide, probably for the first time in the English language, authoritative information on the classic Soviet tank designs of the 20th century. The series will be required reading for all those interested in the development of armored warfare over the past 100 years.

Biological Reactive Intermediates Vi Patrick M. Dansette,Robert R. Snyder,Terrence J. Monks,David J. Jollow,I. Glenn Sipes,Helmut Greim,G. Gordon Gibson,Marcel Delaforge,2012-12-06 This volume presents a discussion of the biological effects produced following the metabolism of xenobiotic chemicals to chemically reactive metabolites, i.e., toxic and carcinogenic effects, which have been the basis of all five earlier volumes in this series. In particular, this volume devotes sections to structure-activity relationships, recent advances in the understanding of the chemistry of reactive metabolites, and the generation and activity of reactive oxygen species with special emphasis on nitric oxide. There are also segments on DNA damage by reactive metabolites and DNA repair, tissue specific responses to BRIs, and human health effects of BRIs. The papers that comprise this volume were submitted by world class scientists who were in attendance at The Symposium on Biological Reactive Intermediates VI at the Université René Descartes, July 16-20, 2000.

*BT Fast Tank* Steven J. Zaloga,2016-08-25 When the Red Army needed to mechanize its cavalry branch in the 1930s, the BT fast tank was its solution. Based on the American Christie high-speed tank, the Red Army began a program to adapt the design to its own needs. Early versions were mechanically unreliable and poorly armed but by the mid-1930s, the BT-5 emerged, armed with an excellent dual-purpose 45mm gun. It saw its combat debut in the Spanish Civil War in 1937 and was later used in the border battles with the Japanese Kwangtung Army in the late 1930s. The final production series, the BT-7, was the most refined version of the family. One of the most common types in Red Army service in the first years of the Second World War, BT tanks saw extensive combat in Poland, Finland, and the opening phases of Operation Barbarossa in 1941 and latterly during the 1945 campaign against the Japanese in Manchuria – this is the story of their design and development history.

**Estimation and Testing Under Sparsity** Sara van de Geer,2016-06-28 Taking the Lasso method as its starting point, this book describes the main ingredients needed to study general loss functions and sparsity-inducing regularizers. It also provides a semi-parametric approach to establishing confidence intervals and tests. Sparsity-inducing methods have proven to be very useful in the analysis of high-dimensional data. Examples include the Lasso and group Lasso methods, and the least squares method with other norm-penalties, such as the nuclear norm. The illustrations provided include generalized linear models, density estimation, matrix completion and sparse principal components. Each chapter ends with a problem section. The book can be used as a textbook for a graduate or PhD course.

On the Dynamics of Exploited Fish Populations Raymond J.H. Beverton,Sidney J. Holt,2012-12-06 Among the fishes, a remarkably wide range of biological adaptations to diverse habitats has evolved. As well as living in the conventional habitats of lakes, ponds, rivers, rock pools and the open sea, fish have solved the problems of life in deserts, in the deep sea, in the cold antarctic, and in warm waters of high alkalinity or of low oxygen. Along with these adaptations, we find the most impressive specializations of morphology, physiology and behaviour. For example we can marvel at the high-speed swimming of the marlins, sailfish and warm-

blooded tunas, air-breathing in catfish and lungfish, parental care in the mouth-brooding cichlids, and viviparity in many sharks and toothcarps. Moreover, fish are of considerable importance to the survival of the human species in the form of nutritious, delicious and diverse food. Rational exploitation and management of our global stocks of fishes must rely upon a detailed and precise insight of their biology. The Chapman & Hall Fish and Fisheries Series aims to present timely volumes reviewing important aspects of fish biology. Most volumes will be of interest to research workers in biology, zoology, ecology and physiology but an additional aim is for the books to be accessible to a wide spectrum of non-specialist readers ranging from undergraduates and postgraduates to those with an interest in industrial and commercial aspects of fish and fisheries.

*Visual Quantum Mechanics* Bernd Thaller,2007-05-08 Visual Quantum Mechanics uses the computer-generated animations found on the accompanying material on Springer Extras to introduce, motivate, and illustrate the concepts explained in the book. While there are other books on the market that use Mathematica or Maple to teach quantum mechanics, this book differs in that the text describes the mathematical and physical ideas of quantum mechanics in the conventional manner. There is no special emphasis on computational physics or requirement that the reader know a symbolic computation package. Despite the presentation of rather advanced topics, the book requires only calculus, making complicated results more comprehensible via visualization. The material on Springer Extras provides easy access to more than 300 digital movies, animated illustrations, and interactive pictures. This book along with its extra online materials forms a complete introductory course on spinless particles in one and two dimensions.

Mathematical Methods for Financial Markets Monique Jeanblanc,Marc Yor,Marc Chesney,2009-10-13 Mathematical finance has grown into a huge area of research which requires a large number of sophisticated mathematical tools. This book simultaneously introduces the financial methodology and the relevant mathematical tools in a style that is mathematically rigorous and yet accessible to practitioners and mathematicians alike. It interlaces financial concepts such as arbitrage opportunities, admissible strategies, contingent claims, option pricing and default risk with the mathematical theory of Brownian motion, diffusion processes, and Lévy processes. The first half of the book is devoted to continuous path processes whereas the second half deals with discontinuous processes. The extensive bibliography comprises a wealth of important references and the author index enables readers quickly to locate where the reference is cited within the book, making this volume an invaluable tool both for students and for those at the forefront of research and practice.
