Soviet T-55 Main Battle Tank James Kinnear,Stephen Sewell,2019-09-19 The T-55 is one of the most iconic weapons created by the Soviets during the Cold War and also one of the most widely deployed weapons in history. Like its younger brother, the T-54, the T-55 enjoyed a long career in the Red Army and even into the early days of the reformed Russian Army. Under their control it saw very little combat use or deployments, but it was widely sold to other nations and participated in many of the wars and combat operations from the mid-1960s to the present. The T-55 has been employed in almost every conflict in the Middle East and Africa from its introduction into service. Even today the tank is still employed by both sides in the Syrian Civil War, and they are also in service with Kurdish forces in the struggle against ISIS in the northern part of Iraq. Containing more than 400 stunning contemporary and modern photographs, and written by two experts on Soviet armour, this authoritative book tells the complete story of the T-55, one of the most widely produced tanks of all time.

Evolution of Non-Expected Utility Preferences

Sven von Widekind,2008-01-08 The theory on the evolution of preferences deals with the endogenous formation of preference relations in strategic situations. It is related to the field of evolutionary game theory. In this book we analyze the role and the influence of general, possibly non-expected utility preferences in such an evolutionary setup. In particular, we demonstrate that preferences which diverge from von Neumann-Morgenstern expected utility may potentially prove to be successful under evolutionary pressures.

Combat Vehicles of Russia's Special Forces Mark

Galeotti, 2020-05-28 An illustrated study of both the combat vehicles of Russia's legendary Spetsnaz special forces and the whole range of unique and modified vehicles that Russia's elite units use, from combat snowmobiles to the world's biggest water-cannon. Elite forces need elite vehicles. As Vladimir Putin has devoted effort and funds into modernising Russia's armed forces and turning them into an instrument geared not just for defending the Motherland but also projecting power beyond its borders, Russia has seen a growing emphasis on special and specialist forces. Traditionally, the elite Spetsnaz commandos had to make do with regular vehicles or civilian-based 'technicals', not least to conceal their presence (or, indeed, very existence). Now, increasingly at the forefront of Russian power projection, the Spetsnaz are acquiring more capable, versatile vehicles, such as the paratroopers' BTR-D personnel carrier, and also experimenting with exotic, specialist new acquisitions, such as the Chaborz M-3 buggy and Yamaha Grizzly all-terrain vehicle. The other elite branches of Russia's forces, such as the Arctic-warfare troops of the 200th Independent Motor Rifle Brigade, the paratroopers of the Air Assault Troops (VDV), the Naval Infantry, and the elite units of the security forces are also

developing and fielding new vehicles for their specialist roles, from combat snowmobiles to urban-warfare vehicles. From highly-mobile LMVs able to operate in the deserts of Syria or the streets of Ukraine, through dedicated fire-support vehicles such as the air-droppable Sprut-SD or the massive BMPT 'Terminator', to amphibious tanks and drone-equipped security trucks, these are the workhorses of Russia's special forces. This study explores all these combat vehicles in detail, combining expert analysis from Russia expert Mark Galeotti with highly accurate full-colour illustrations and photographs.

Quality for All Gunnar Karlsson, Michael I.

Smirnov, 2003-09-24 The Internet has nearly a ten year history as a global, public communication infrastructure. The two applications that have created the demand from private and business users have been the World-Wide Web and electronic mail. We have in the last few years seen the rapidly emerging popularity of peer-to-peer sharing of files, mostly for music, and to a more limited extent also the introduction of Internet telephony, television, and radio. These services place demands on the infrastructure that are higher with respect to quality and connectivity than web surfing and e-mail. Mobile (cellular) telephony has rivaled the Internet with respect to growth during the last decade. The hitherto separate networks are now set to merge into a mobile Internet that will give wireless access to all Internet services. The ambition behind the Internet's continuing development is that it should serve as a general-purpose infrastructure and provide adequate support for all types of applications in terms of quality, connectivity, and cost. Thus the demands made on all Internet services must also be met by wireless access, and the circuit quality of a voice connection for mobile telephony must also be provided in the wired IP networks.
