The Metal Shaper David J. Gingery, 2014-07-11 Build your own Metal Shaper. Exotic is a mild adjective when applied to this shaper. It will cut splines, keyways, gears, sprockets, dovetail slides, flat and angular surfaces and irregular profiles. And all of these with a simple hand-ground lathe tool bit. Obsolete in modern industry, of course, because milling machines do the work much faster and cheaper. But you can't beat a shaper for simplicity and economy in the home shop. The shaper has a 6 stroke and a mean capacity of 5 x 5, variable and adjustable stroke length, automatic variable cross feed and graduated collars. You will be proud to add this machine to your shop.

Build Your Own Farm Tools Josh Volk, 2021-08-17 Josh Volk, author of the best-selling *Compact Farms*, offers small-scale farmers an in-depth guide to building customized equipment that will save time and money and introduce much-needed efficiencies to their operations. Volk begins with the basics, such as setting up a workshop and understanding design principles, mechanical principles, and materials properties, then presents plans for making 15 tools suited to small-farm tasks and processes. Each project includes an explanation of the tool's purpose and use, as well as the time commitment, skill level, and equipment required to build it. Projects range from the super-simple (requiring a half-day to build) to the more complex, and include how-to photographs and illustrations with variations for customizing the finished implement. Along with instructions for building items such as simple seedling benches, a mini barrel washer, a DIY germination chamber, and a rolling pack table, Volk addresses systems design for farm efficiency, including how to design an effective drip irrigation system and how to set up spreadsheets for collecting important planning, planting, and market data. Well before Neil Armstrong set foot on the moon, people have been fascinated with space—whether it's the movements of the moon, sun, stars, and planets or the possibilities of what (or who!) they contain—incorporating celestial objects into their mythologies and art. No longer the stuff of science fiction, space (and space travel) continues to challenge our curiosity and our imagination to this day. But even with the advent of private missions to “zero gravity” and travel to Mars a distant possibility, being an astronaut is still out of reach for most of us. So if you've ever had dreams of building your own rocket, here's your chance. The all-in-one Build Your Own Rocket kit is exciting to build, whether on your own or with your family, and will lift off flight after flight. Included in this kit is an easy-to-follow instruction manual for putting together not only the rocket body and boosters, nose cones, and fins, but also the launcher and detonator. Learn why these parts are important and also what helps propel them through the air. Also in the manual are safety tips, hints for streamlining the building process, suggestions for personalizing the rocket with the included design decals, and just a bit of moon mythology. Inside, you will find: 16-page illustrated instruction book with easy-to-follow assembly directions along with space and rocket facts Press-out templates for rocket boosters, nose cones, fins, and more Rocket body tube Foam nose cone and tube Launcher base and detonator Rubber hoses and bicycle-pump-nozzle adapter Design decals to personalize your rocket before lift off This kit is perfect for anyone who has ever dreamed of joining NASA, enjoys tinkering with projects, or just likes to have a good time outdoors. While your rocket won't go to the moon, you can take it wherever you go and experiment with different types of wind. How far will it go? The sky's the limit!

How to Build Your Own Guitar Glad Schwesinger, 2002-03-12 This book was written to show that there is an easier way to make a guitar. I have many books on building instruments but they were written by musicians, not wood workers. All too often, they are following a method many years old, but we now have power tools and there are wood shops where we can get boards planed to the correct thickness. The glue of today is far superior to the horse hide glue of yesteryears. I use two brass screws to secure the neck to the body. For me building a guitar is a fun project. When I am finished they look so nice and sound even nicer. Because of this, I decided to write a book on how to build a guitar and use many pictures to show better details. Here in the Northwest we have spruce, though it is becoming harder to find. Our local Maple makes good back and side wood. A logger friend brought me some quilted Maple and asked me to make him a guitar. The finished guitar was outstanding. It is a fun project to go searching for wood to build an instrument, although one needs a bit of patience and happy attitude.
