A New Species of Bush-warbler from Bougainville Island and a Monophyletic Origin for Southwest Pacific Cettia Mary Lecroy,F. Keith Barker,2006 We describe a new species of *Cettia* from the Crown Prince Range, Bougainville Island, North Solomons Province, Papua New Guinea. By combining morphometric and molecular phylogenetic techniques, we attempt to broaden our understanding of evolutionary processes within the genus *Cettia* in the southwest Pacific. The new species proves to be distinct with respect to several morphological characteristics that are most probably related to a more terrestrial lifestyle than that of its congeners. Molecular data agree with morphological data in establishing that these birds are at least as distinct from the other island forms of *Cettia* as those forms are from each other, far exceeding intraspecific variation. These data and the restricted distribution of the population on Bougainville strongly support recognition of a new species. The application of molecular phylogenetic techniques also supports the idea that the new species and other island forms of *Cettia* confined to mountains on southwest Pacific islands are derived from a single common ancestor rather than being independently derived from one or more mainland forms. In addition, the relatively recent discovery of two new species of *Cettia* suggests that additional forms await discovery in other poorly known areas of the southwest Pacific. Our results point to the need for further molecular studies and for additional field research into the distribution and ecology of forest songbirds on islands.

**A Checklist of the World's Bird Species** David Boyd,2006-05 A checklist of the world's 9900+ bird species with latin and English names. Subspecies are not covered. Boxes are also provided for the reader to record their own observations.

*Taxonomy of the birds of the world* fotolulu,2018-10-30 How do you come up with the idea to list all the birds in the world including the subspecies and to give all birds English names? There is a reason for it - my favorite saying, whose author is unknown: Everyone said that's not possible - then there was one who did not know that and just did it! I am an animal photographer and probably a little bit crazy. Ive built a complete animal database for mammals and birds over the last decade. This facilitates my work in determining and archiving images and assigning keywords, especially among the many subspecies. With this book, I would like to give all birding friends and ornithologists a complete overview in English. For this I have given unique English names to all subspecies. The naming should not meet any scientific requirements. The names are based on translations from the Latin name, geographical distribution areas and the names of the discoverers. The entries consist of the scientific name, the English name, the distribution areas and the author. I wish you a lot of fun with this book, but especially while watching the fascinating birdlife. fotolulu

**Warblers of Europe, Asia and North Africa** Kevin Baker,2010-06-30 Many warblers are notoriously difficult to identify in the field (and even in the hand!) and, until now, there has been no definitive guide to the species of these regions. This guide covers 145 species, covering all aspects of identification. The text includes sections on moult, voice, habitat and behaviour, distribution and measurements. All species (and many races) are illustrated within the 48 colour plates, and there is also a colour distribution map for each species, with a wealth of line drawings complementing the text. **Birds of East Asia** Mark Brazil,2009-01-01 This is the first single volume guide ever devoted to the eastern Asian avifauna. The eastern Asian region, centring especially on the major islands off the continental coast (including Japan and Taiwan) and the immediately adjacent areas of the Asian continent from Kamchatka in the north and including the Korean Peninsula are an important centre of endemism. Birds endemic to this region include representatives of many of the major families, from the world's largest eagle - Steller's Sea Eagle - to the tiny Formosan Firecrest. The east Asian continental coast and the offshore islands also form one of the world's major international bird migration routes, especially for waterfowl, shorebirds and raptors, while the east Asian continental mainland itself is home to a wide range of species little known to western ornithologists such as Scaly-sided Merganser, Oriental Stork and Mugimaki Flycatcher. The guide features the most up-to-date text available, which, in conjunction with extensive colour plates throughout, facilitates the field identification of all of the species known from the region. Colour distribution maps enhance the text by providing a visual analysis of the summer, winter and migratory ranges of all species.
