

C 202

Marco Mattioli

Macchi C.202 Folgore Davide F. Jabes, Alessandro Romanello, Niccolò Tognarini, 2021-12-02 The Macchi C.202 was probably the most successful Italian fighter during the Second World War. It is generally agreed that the performance of the Macchi was superior to both the Hawker Hurricane and the Curtiss P-40 Kittyhawk and on a par with the Supermarine Spitfire Mk. V. It is not by chance that virtually all the Italian top scoring aces flew this plane either with the Regia Aeronautica or the Aeronautica Nazionale Repubblicana. At the same time, the Mc.202 is the symbol of the dysfunctions in the Italian military-industrial complex: the lack of sound industrial planning resulting in orders from the Regia Aeronautica for an exaggerated number of different aircraft; the lack of the development of adequate engines limiting aircraft performance and reducing capacity to house weapons with a proper punch; the corruption of politics and the culpable connivance of the high military spheres. The Mc.202 was therefore produced in limited numbers, while there is consensus that air war, especially in the African theatre, would have been different had the aircraft been adopted before.

Spitfire V vs C.202 Folgore Donald Nijboer, 2014-04-20 The inability of the Italians and Germans to invade Malta proved decisive for Allied victory in the Mediterranean during World War II, as the islands provided the Allies with a base from which to project air power. Early Italian efforts to pound the islands into submission were supplemented by major German

forces from January 1942 and in a few weeks the situation for the defenders reached a critical stage; in response, in March 1942 the first Spitfires were delivered to Malta. Throughout the summer C.202s fought over Malta, escorting tiny formations of Cant Z.1007s, SM.79s and Ju 88s. The fighting subsided in August and September, but grew in strength with the arrival of more C.202s. In October the Regia Aeronautica could muster three Gruppi with a total of 74 C.202s. For ten days the Italians pressed a relentless attack before attrition brought the offensive to a halt. Throughout the bombing campaign the British were able to supply Malta with ever increasing numbers of Spitfires.

Macchi C.202/C.205V Units in Combat Marco Mattioli, 2022-05-26 A study of the Macchi Folgore and Veltro, the most successful Italian fighters in World War II. With specially commissioned profiles, the book examines how these fighters were conceived, their performance and the fascinating stories of their pilots. Italian fighters, such as the Fiat G.50 and Macchi C.200, had always struggled with their straight-line speed and restricted armament when engaging their Allied counterparts. To solve these problems, Macchi initially designed the C.202 Folgore using German engines, which contributed to create a faster aircraft, with a superior rate of climb and reachable altitude. Folgore's success in various North African engagements then paved the way for the development of Macchi's most successful fighter, the C.205V Veltro, which managed to combine increased speed and increased power.

Packed with specially commissioned artwork and original photos, and written by Italian military aviation specialist Marco Mattioli, this fascinating book explores how the premier Italian fighter of the war came to life and the historical circumstances that prevented it from becoming one of the most dreaded aircraft in the Mediterranean.

Macchi C. 202 Folgore Davide F. Jabes, Alessandro Romanello, Niccolo Tognarini, 2022-02-03 The Macchi C.202 was probably the most successful Italian fighter in WW2, the aircraft of almost all Italian top scoring aces. Mc.202 was fast and manoeuvrable, on par with, or better than the allied fighters of the same period. However, there were too few machines to exert a determinant role during the war due to inadequate planning and resources.

Macchi C.202 in Action Roberto Gentilli, Luigi Goren, 1980

Macchi C. 202 Folgore 3rd Edition Przemyslaw Skulski, 2020-11-15 Third edition, revised and extended. The development of the most famous Italian WWII fighter is described and illustrated. Combining the agility and excellent flying characteristics of the earlier MC.200 with a powerful German aero-engine, the Folgore was the best Italian fighter in large-scale service. It served with the Regia Aeronautica and other forces, including the Croatian air arm. This book describes the design, development and operations of this elegant and effective fighter. This expanded 3rd edition contains: scale plans, photos and drawings from Technical Manuals, superb colour illustrations of camouflage and markings, and rare

b&w archive photographs. Colour photos of the preserved aircraft illustrate all aspects of the airframe. Essential reading for aviation enthusiasts & scale aeromodellers.

Italian Aces of World War 2 Giorgio

Apostolo,2012-12-20 Flying aircraft such as the Macchi 200-202, Fiat G.50 and biplane Fiat CR.42, the Italian fighter pilots were recognised by their Allied counterparts as brave opponents blessed with sound flying abilities, but employing under-gunned and underpowered equipment. Following the Italian surrender in September 1943, a number of aces continued to take the fight to the Allies as part of the Luftwaffe-run ANR, which was equipped with far more potent equipment such as the Bf 109G, Macchi 205V and Fiat G.55. Flying these types, the handful of ANR squadrons continued to oppose Allied bombing raids on northern Italy until VE-Day.

Molten Salt Chemistry Gleb Mamantov,Roberto

Marassi,2012-12-06 Molten salts are of considerable significance to chemical technology. Applications range from the established ones, such as the production of aluminum, magnesium, sodium and fluorine, to those as yet to be fully exploited, such as molten salt batteries and fuel cells, catalysis, and solar energy. Molten salts are investigated for different purposes by many diverse techniques. There is a need to keep investigators working in different areas, such as metal production, power sources, and glass industry, aware of progress in various specialties, as well as to familiarize new research workers with the fundamental aspects of

the broad field of molten salt _ chemistry. This volume constitutes the plenary lectures presented at the NATO Advanced Study Institute on Molten Salt Chemistry, Camerino, Italy, August 3-15, 1986. The fundamentals and several selected applications of molten salt chemistry were addressed. The major fundamental topics covered at this ASI were the structure of melts, thermodynamics of molten salt mixtures, theoretical and experimental studies of transport processes, metal-metal salt solutions, solvent properties of melt systems, acid-base effects in molten salt chemistry, electronic absorption, vibrational, and nuclear magnetic resonance spectroscopy of melt systems, electrochemistry and electroanalytical chemistry in molten salts, and organic chemistry in molten salts. The applied aspects of molten salt chemistry included the chemistry of aluminum production, electrodeposition using molten salts, and molten salt batteries and fuel cells.

Standards for Internal Control in the Federal Government United States Government Accountability Office, 2019-03-24 Policymakers and program managers are continually seeking ways to improve accountability in achieving an entity's mission. A key factor in improving accountability in achieving an entity's mission is to implement an effective internal control system. An effective internal control system helps an entity adapt to shifting environments, evolving demands, changing risks, and new priorities. As programs change and entities strive to improve operational processes and implement new technology, management continually evaluates its internal control system so that it is effective and updated when necessary. Section 3512 (c) and (d) of Title 31 of the United States Code (commonly known as the Federal Managers' Financial Integrity Act (FMFIA)) requires the Comptroller General to issue standards for internal control in the federal government.

The Petlyakov Pe-2 Peter C Smith, 2020-03-30 During the Second World War, the Soviet Union's Petlyakov Pe-2 Peshka dive-bomber was unique in that it was as fast as most fighter aircraft. This was in a period when it was considered by the RAF that it was impossible for monoplane aircraft to conduct vertical bombing with any degree of

success. During the war the Pe-2 was the principal dive- and light-bomber of Russia's air power across the vast Eastern Front and it continued in service until the early 1950s with the air forces of the Warsaw Pact countries and Yugoslavia. Conceived by a team of top aircraft designers whom Stalin had incarcerated in a prison camp on trumped-up political charges, the Pe-2 had originally been designed as a high-altitude twin-engine fighter plane, but, due to the outstanding success of the German Stukas in the Blitzkrieg, its role was quickly changed to that of a fast dive-bomber. The Pe-2 arrived in service around the time of the German attack on its hitherto ally. Although only a handful had reached front line units by the start of Operation Barbarossa in June 1941, the Pe-2 soon became the main dive-bomber in both the Soviet VVS and Naval service. Mass production, by factories hastily moved back beyond the front, meant that numbers increased rapidly, and more than 11,000 of the type, including many variants, were built up to 1945. The Peshka became the mainstay of the Soviet counteroffensive that ultimately resulted in the fall of Berlin. Pe-2s also led the way in the brief but annihilating Manchurian campaign against Japan in the closing days of the war in 1945. Using official sources, including the official Pe-2 handbook, and numerous color and black-and-white photographs made available to the author from both official and private sources and collections, this book is the definitive record of the Pe-2 - the dive-bomber supreme!
