Industrial Power Systems Shoaib Khan,Sheeba Khan,Ghariani Ahmed,2018-10-03 The modernization of industrial power systems has been stifled by industry's acceptance of extremely outdated practices. Industry is hesitant to depart from power system design practices influenced by the economic concerns and technology of the post World War II period. In order to break free of outdated techniques and ensure product quality and continuity of operations, engineers must apply novel techniques to plan, design, and implement electrical power systems. Based on the author's 40 years of experience in Industry, Industrial Power Systems illustrates the importance of reliable power systems and provides engineers the tools to plan, design, and implement one. Using materials from IEEE courses developed for practicing engineers, the book covers relevant engineering features and modern design procedures, including power system studies, grounding, instrument transformers, and medium-voltage motors. The author provides a number of practical tables, including IEEE and European standards, and design principles for industrial applications. Long overdue, Industrial Power Systems provides power engineers with a blueprint for designing electrical systems that will provide continuously available electric power at the quality and quantity needed to maintain operations and standards of production.

Macchi C.200 "Saetta" Mantelli - Brown - Kittel - Graf,2015-07-17 The Macchi C.200 Saetta was a single-engine jet fighter low-wing developed by the Italian Air Force Aeronautica Macchi in the thirties. He made the first flight December 24, 1937 and went online in 1939. Although equipped with an underpowered engine and armed with only a couple of machine guns caliber 12.7 mm, the design of the Lightning was very good. The Macchi C.200 had no particular flaws and was equipped with excellent skills for close combat. In fact, its handling was excellent and stability in the battered high speed, exceptional. So he could duel with the best Allied fighters and come out undefeated. Only the Supermarine Spitfire could overcome it, in pull-up. Since the entry into the war, June 10, 1940, the armistice of 1943, the Lightning played most operational missions than any other Italian air. With the insignia of the Royal Air Force, he worked on almost all fronts of World War II, from the Mediterranean Sea, Africa, the Balkans. A Autonomous Group worked in Russia where he obtained the excellent report culls / losses of 88 to 15. The Macchi C.200 were built, as well as by the parent Aer.Macchi (395 specimens), also from Breda, who built in fact the highest number (556), and the SAI Ambrosini (223), in different production lots; This brought about small differences in painting aircraft, both from company to company, from which different series production.
