Sonia Sander, Scholastic

Calling All Cars Kathleen Battles, *Calling All Cars* shows how radio played a key role in an emerging form of policing during the turbulent years of the Depression. Until this time popular culture had characterized the gangster as hero, but radio crime dramas worked against this attitude and were ultimately successful in making heroes out of law enforcement officers. Through close analysis of radio programming of the era and the production of true crime docudramas, Kathleen Battles argues that radio was a significant site for overhauling the dismal public image of policing. However, it was not simply the elevation of the perception of police that was at stake. Using radio, reformers sought to control the symbolic terrain through which citizens encountered the police, and it became a medium to promote a positive meaning and purpose for policing. For example, Battles connects the apprehension of criminals by a dragnet with the idea of using the radio network to both publicize this activity and make it popular with citizens. The first book to systematically address the development of crime dramas during the golden age of radio, *Calling All Cars* explores an important irony: the intimacy of the newest technology of the time helped create an intimate authority—the police as the appropriate force for control—over the citizenry.

Calling All Minds Temple Grandin, Ph.D., 2019-04-30 From world-renowned autism spokesperson, scientist, and inventor Temple Grandin -- a book of personal stories, inventions, and facts that will blow young inventors' minds and make them soar. Have you ever wondered what makes a kite fly or a boat float? Have you ever thought about why snowflakes are symmetrical, or why golf balls have dimples? Have you ever tried to make a kaleidoscope or build a pair of stilts? In *Calling All Minds*, Temple Grandin explores the ideas behind all of those questions and more. She delves into the science behind inventions, the steps various people took to create and improve upon ideas as they evolved, and the ways in which young inventors can continue to think about and understand what it means to tinker, to fiddle, and to innovate. And laced throughout it all, Temple gives us glimpses into her own childhood tinkering, building, and inventing. More than a blueprint for how to build things, in *Calling All Minds* Temple Grandin creates a blueprint for different ways to look at the world. And more than a call to action, she gives a call to imagination, and shows readers that there is truly no single way to approach any given problem--but that an open and inquisitive mind is always key. Praise for *Calling All Minds*: An impassioned call to look at the world in unique ways with plenty of practical advice on how to cultivate a curious, inquiring, imaginative mind. —Kirkus Reviews Both practical and inspirational, this useful book describes an overall approach to viewing the world creatively, as exemplified by the numerous projects and supporting material provided here. —VOYA Grandin offers a nuanced perspective on the qualities of a successful inventor—notably, a sense of wonder and curiosity, careful observation, and the willingness to learn from mistakes. —Publishers Weekly

Hacking Connected Cars Alissa Knight, 2020-02-25 A field manual on contextualizing cyber threats, vulnerabilities, and risks to connected cars through penetration testing and risk assessment *Hacking Connected Cars* deconstructs the tactics, techniques, and procedures (TTPs) used to hack into connected cars and autonomous vehicles to help you identify and mitigate vulnerabilities affecting cyber-physical vehicles. Written by a veteran of risk management and penetration testing of IoT devices and connected cars, this book provides a detailed account of how to perform penetration testing, threat modeling, and risk assessments of telematics control units and infotainment systems. This book demonstrates how vulnerabilities in wireless

networking, Bluetooth, and GSM can be exploited to affect confidentiality, integrity, and availability of connected cars. Passenger vehicles have experienced a massive increase in connectivity over the past five years, and the trend will only continue to grow with the expansion of The Internet of Things and increasing consumer demand for always-on connectivity. Manufacturers and OEMs need the ability to push updates without requiring service visits, but this leaves the vehicle's systems open to attack. This book examines the issues in depth, providing cutting-edge preventative tactics that security practitioners, researchers, and vendors can use to keep connected cars safe without sacrificing connectivity. Perform penetration testing of infotainment systems and telematics control units through a step-by-step methodical guide Analyze risk levels surrounding vulnerabilities and threats that impact confidentiality, integrity, and availability Conduct penetration testing using the same tactics, techniques, and procedures used by hackers From relatively small features such as automatic parallel parking, to completely autonomous self-driving cars—all connected systems are vulnerable to attack. As connectivity becomes a way of life, the need for security expertise for in-vehicle systems is becoming increasingly urgent. Hacking Connected Cars provides practical, comprehensive guidance for keeping these vehicles secure.

The Last Lecture Randy Pausch,2008-04-08 After being diagnosed with terminal cancer, a professor shares the lessons he's learned—about living in the present, building a legacy, and taking full advantage of the time you have—in this life-changing classic. We cannot change the cards we are dealt, just how we play the hand. —Randy Pausch A lot of professors give talks titled The Last Lecture. Professors are asked to consider their demise and to ruminate on what matters most to them. And while they speak, audiences can't help but mull over the same question: What wisdom would we impart to the world if we knew it was our last chance? If we had to vanish tomorrow, what would we want as our legacy? When Randy Pausch, a computer science professor at Carnegie Mellon, was asked to give such a lecture, he didn't have to imagine it as his last, since he had recently been diagnosed with terminal cancer. But the lecture he gave—Really Achieving Your Childhood Dreams—wasn't about dying. It was about the importance of overcoming obstacles, of enabling the dreams of others, of seizing every moment (because time is all you have . . . and you may find one day that you have less than you think). It was a summation of everything Randy had come to believe. It was about living. In this book, Randy Pausch has combined the humor, inspiration and intelligence that made his lecture such a phenomenon and given it an indelible form. It is a book that will be shared for generations to come.

Calling Bullshit Carl T. Bergstrom,Jevin D. West,2021-04-20 Bullshit isn't what it used to be. Now, two science professors give us the tools to dismantle misinformation and think clearly in a world of fake news and bad data. "A modern classic . . . a straight-talking survival guide to the mean streets of a dying democracy and a global pandemic."—Wired Misinformation, disinformation, and fake news abound and it's increasingly difficult to know what's true. Our media environment has become hyperpartisan. Science is conducted by press release. Startup culture elevates bullshit to high art. We are fairly well equipped to spot the sort of old-school bullshit that is based in fancy rhetoric and weasel words, but most of us don't feel qualified to challenge the avalanche of new-school bullshit presented in the language of math, science, or statistics. In *Calling Bullshit*, Professors Carl Bergstrom and Jevin West give us a set of powerful tools to cut through the most intimidating data. You don't need a lot of technical expertise to call out problems with data. Are the numbers or results too good or too dramatic to be true? Is the claim comparing like with like? Is it confirming your personal bias? Drawing on a deep well of expertise in statistics and computational biology, Bergstrom and West exuberantly unpack examples of selection bias and muddled data visualization, distinguish between correlation and causation, and examine the susceptibility of science to modern bullshit. We have always needed people who call bullshit when necessary, whether within a circle of friends, a community of scholars, or the citizenry of a nation. Now that bullshit has evolved, we need to relearn the art of skepticism.

How Lucky Will Leitch,2021-05-11 Curl up with this page-turning mystery perfect for fall 2022 Edgar Award Nominee for Best Novel "A fantastic novel. . . . You are going to like this a lot."—Stephen King "What's more thrilling than a fictional character speaking to us in a voice we haven't heard before, a voice so authentic and immediate—think Huck Finn, Holden Caulfield, Mattie Ross—that we suspect it must've been there all along, that we somehow managed to miss it? Daniel, the protagonist of Will Leitch's smart, funny, heartbreaking new novel *How Lucky*, is just such a voice, and I'm not sure it will ever completely leave my head, or that I want it to."—Richard Russo For readers of *The Curious Incident of the Dog in the Night-Time* and *Nothing to See Here*, a first novel as suspenseful and funny as it is moving, the unforgettable story of a fiercely resilient young man living with a physical disability, and his efforts to solve a mystery unfolding right outside his door.
