### USN Carriers vs IJN Carriers Mark

Stille, 2012-05-20 The IJN was a pioneer in naval aviation, having commissioned the world's first carrier, which was used against the US fleet at Pearl Harbor. The Americans followed suit, initiating a huge aircraft carrier development program. As the War in the Pacific escalated into the largest naval conflict in history, the role of the carrier became the linchpin of American and Japanese naval strategy as these rival vessels found themselves locked in a struggle for dominance of this critical theater. This book provides an analysis of the variety of weaponry available to the rival carriers, in particular the embarked aircraft as well as the powerful ship-borne guns. Study the design and development of these revolutionary ships and 'live' the experiences of the rival airmen and gun crews as they battled for victory in a duel of skill, tenacity and guts.

*Russian/Soviet Aircraft Carrier & Carrier-borne Aviation Design & Evolution, Volume 2* Hugh Harkins, 2017-09-26 Russian/Soviet Aircraft Carrier & Carrier Aviation Design & Evolution Volume 2 In 2017, there were five Russian/Soviet designed and built aircraft carriers in existence, three of which were in operational service - the Project 1143.5 Aircraft Carrying Heavy Cruiser Admiral of the Fleet of the Soviet Union, Kuznetsov in Russian Federation naval service, the INS Vikramaditya (formerly the Project 1143.4 Heavy Aircraft Carrying Cruiser Baku/Admiral of the Fleet of the Soviet Union, Gorshkov) in Indian

naval service and the incomplete former Soviet Project 1143.6 Aircraft Carrying Heavy Cruiser Varyag in service with the Peoples Liberation Army Navy of China as the Liaoning. The other two aircraft carriers, the Project 1143/.2 Kiev and Minsk Heavy Aircraft Carrying Cruisers had been decommissioned and formed museum exhibits in China. This two volume series sets out to detail the stable of Russian/Soviet designed and built significant aircraft carrying vessels and their respective shipborne aviation assets. Volume 1 focused on the design genesis of the major aircraft carrying vessels of the Imperial Russian and Soviet periods, which included Seaplane Carriers, the Project 1123 Moskva Class Anti-Submarine Warfare Helicopter Carrying Cruisers and the Project 1143-1143.4 Kiev and Improved Kiev Class Heavy Aircraft Carrying Cruisers, as well as a number of early and mid-20th century aviation carrying projects. This second volume focusses on the stable of conventional take-off and landing aircraft carriers of the late 20th century and early 21st century periods - the Project 1143.5 Admiral of the Fleet of the Soviet Union, Kuznetsov, the Project 1143.6 Varyag, the nuclear powered Project 1143.7 Ul'yanovsk, as well as the unrealised concepts - the Project 1153 and Project 1160 nuclear powered conventional take-off and landing aircraft carriers and the projected 21st century Project 23000E nuclear powered anti-submarine warfare/attack carrier. Separate chapters deal with the various rotary wing and fixed wing aviation assets that would make up the air groups of the Project 1143.5 Admiral of the

Fleet of the Soviet Union, Kuznetsov and the modified Project 1143.4 INS Vikramaditya. All technical information regarding the warships, systems and weapons has been provided by the respective design houses, developers, builder/manufacturers and operators, as has much of the photographic and graphic material used throughout the volume. The volume is also supported by textual, photographic and graphic material from third party sources, including the defence and intelligence services of various NATO nations and the historical archives of various United States and United Kingdom government agencies.

*Carrier Strike* Donald Nijboer, 2023-12-15 Among many other developments, World War II saw naval warfare shift from the battleship to the aircraft carrier, which remains one of the iconic weapons of the war and the core of modern battle fleets. Developed in the 1920s and 1930s, the aircraft carrier came into its own in World War II and featured prominently in numerous battles, including the Coral Sea, Midway, Guadalcanal, and Leyte Gulf. Later in the war, with many of its own carriers destroyed and its carrier-borne air force crippled, the Japanese relied on kamikazes to replace its aerial strike force and to attack the United States' carrier force, and the United States used its carriers to attack the Japanese homeland. In this photo history, Donald Nijboer traces the history of aircraft carriers, from their early development just after World War I, to the Japanese carrier-borne attack on Pearl Harbor, through the great battles of the Pacific War,

which featured some of military history's great ships: the Yorktown, the Enterprise, the Hornet, the Lexington, and other vessels. Special sections cover British carrier operations in the Indian and Pacific Oceans, as well as the limited carrier operations of the German Navy, including the Graf Zeppelin.

*Essex Class Aircraft Carriers, 1943-1991* Leo Marriott, 2020-12-02 Essex-class aircraft carriers played an essential role in the victory of the United States over Japan in the Second World War, and Leo Marriott's photographic history is a fascinating introduction to them. Without these remarkable ships, the island-hopping campaign of American forces across the Pacific towards Japan would not have been possible. They also took part in the Korean and Vietnam wars that followed. During the Second World War they were at the center of the powerful task groups that could put up hundreds of aircraft to support forces on the ground. They were also prime targets for Japanese air attacks, in particular the kamikaze suicide missions. A total of twenty-four were eventually commissioned including several after the end of the war. The selection of rare photographs and the expert text cover the evolution of US aircraft carrier design prior to the Second World War and look at the factors which shaped the design and construction of the Essex class. Included are dramatic action shots of the new breed of naval aircraft that was launched from their flight decks, including Hellcat and Corsair fighters that took on the Japanese and the carrier-borne jets

that flew over Korea and Vietnam.

*Uncommon Carriers* John McPhee, 2007-04-03 McPhee, in prose distinguished by its warm humor, keen insight, and rich sense of human character, looks at the people who drive trucks, captain ships, pilot towboats, drive coal trains, and carry lobsters through the air: people who work in freight transportation.

Carrier Combat David W. Wragg, 1997 Aircraft carriers were used in many of the crucial naval engagements of the Second World War, ranging from the Royal Navy's hunt for the Bismarck and the protection of Convoy PQ18 in the Arctic, to the US Navy's victories against the Japanese in the Coral Sea and at Midway in the Pacific theatre. It was superior American sea power that finally drove the Japanese into bloody retreat and towards ultimate defeat. In the years that followed the Second World War, aircraft carriers played a vital role as capital ships in the projection of power across the globe. This was particularly so in the opening conflicts of the Cold War period when carrier air power was used to effect in Korea and at Suez during the 1950s. The US made extensive use of carrier-based aircraft during the Vietnam war as did Britain in the later Falklands conflict. In 1991, US Navy carriers were instrumental in the successful prosecution of Operation Desert Storm. Combining the author's own narrative with vivid first-hand accounts by those who served aboard the ships, or with the carrier-borne naval and marine air squadrons, *Carrier Combat* is the dramatic story of the aircraft carrier at war. Fully illustrated with archive photographs in colour and

black and white, it will appeal to all with an interest in naval air power.

**Carriers at War, 1939–1945** Adrian

Stewart, 2013-06-19 The author begins this fascinating book by tracing aircraft carrier development between the Wars. Eschewed by the Germans and Italians and with Britain squandering her early lead, the Americans and Japanese became front-runners. The Royal Navy learnt the hard way in the early stages of WW2 with the loss of HMS Courageous and Glorious but, following successes at Taranto and Matapan, the value of carriers was no longer in doubt. The sinking of Bismarck and the cataclysmic Pearl Harbor attack signaled the end of the Battleship era. Stung by such spectacular losses the US Navy threw its weight behind the carrier concept and the naval war in the Pacific (Guadalcanal, East Solomon Islands, Santa Cruz, Midway and Leyte Gulf) revolved round carrier-borne aircraft. Meanwhile the carrier became pivotal in protecting vital convoys in the Atlantic, Arctic and Mediterranean. The author backs his arguments with copious examples of naval and air action.

**Ju 87 Stuka vs Royal Navy Carriers** Robert

Forsyth, 2021-07-22 Ju 87 dive-bombers, originally developed for pin-pointing bombing missions against land targets and Allied naval vessels were deployed by both the Luftwaffe and the Regia Aeronautica against the Allied forces. Included in such a target were perhaps the greatest prize of all for a Stuka pilot: a British aircraft carrier. This superbly illustrated book looks at the duel between the Ju 87 Stuka and the aircraft carriers

of the Royal Navy. Despite their gun protection ('pompoms') and their squadrons of fighters, these immense and mighty vessels proved irresistible targets to determined and experienced Stuka aces as they endeavoured to stop British naval intervention in the campaigns in Norway, Malta and Crete. By 1941, the Ju 87 had become known by the British as a fearsome aircraft following its operations in France, specifically at Dunkirk, as well as in the Balkans. For the Luftwaffe, it was an aircraft in which they still had great confidence despite its mauling in the Battle of Britain during the summer of 1940. This book examines the key attributes and shortcomings of both aircraft and carrier by analysing various compelling episodes including the dramatic attacks on Ark Royal by Stukageschwader (St.G) 1 off Norway in April 1940, the strikes by the Luftwaffe's St.G 1, St.G 2 and the Regia Aeronautica's 237<sup>o</sup> Squadriglia against Illustrious in Malta harbour. Aside from outstanding photography and artwork, this volume also includes numerous personal accounts from Stuka crews, the pilots of carrier-borne fighters opposing them and the sailors embarked in the various carriers that came under attack.

### **The British Carrier Strike Fleet after 1945**

David Hobbs, 2015-10-30 "A comprehensive study of the bittersweet post WWII history of British naval aviation . . . will become a standard reference for its subject."—Firetrench In 1945 the most powerful fleet in the Royal Navy's history was

centered on nine aircraft carriers. This book charts the post-war fortunes of this potent strike force; its decline in the face of diminishing resources, its final fall at the hands of uncomprehending politicians, and its recent resurrection in the form of the Queen Elizabeth class carriers, the largest ships ever built for the Royal Navy. After 1945 "experts" prophesied that nuclear weapons would make conventional forces obsolete, but British carrier-borne aircraft were almost continuously employed in numerous conflicts as far apart as Korea, Egypt, the Persian Gulf, the South Atlantic, East Africa and the Far East, often giving successive British Governments options when no others were available. In the process the Royal Navy invented many of the techniques and devices crucial to modern carrier operations angled decks, steam catapults and deck-landing aids while also pioneering novel forms of warfare like helicopter-borne assault, and tactics for countering such modern plagues as insurgency and terrorism. This book combines narratives of these poorly understood operations with a clear analysis of the strategic and political background, benefiting from the author's personal experience of both carrier flying and the workings of Whitehall. It is an important but largely untold story, of renewed significance as Britain once again embraces carrier aviation. "Makes a timely and welcome appearance . . . will make compelling reading for those with serious concern for our naval affairs."—St. Andrews in Focus

*Combat Pair* Benjamin S. Lambeth, 2007 During the more than three decades that have elapsed since

the war in Vietnam ended, the U.S. Air Force and U.S. Navy have progressively developed a remarkable degree of harmony in the integrated conduct of aerial strike operations. That close harmony stands in sharp contrast to the situation that prevailed throughout most of the Cold War, when the two services lived and operated in wholly separate physical and conceptual worlds, had distinct and unique operating mindsets and cultures, and could claim no significant interoperability features to speak of. Once the unexpected demands of fighting a joint littoral war against Iraq in 1991 underscored the costs of that absence of interoperability, however, both the Air Force and the Navy quickly came to recognize and embrace the need to change their operating practices to accommodate the demise of the Soviet threat that had largely determined their previous approaches to warfare and to develop new ways of working with each other in the conduct of joint air operations to meet a new array of post-Cold War challenges around the world. This monograph describes the evolution of Air Force and Navy integration in aerial strike warfare from the time of the Vietnam War, when any such integration was virtually nonexistent, to the contemporary era when Air Force and Navy air combat operations have moved ever closer to a point where they can be said to provide both a mature capability for near-seamless joint-force employment and a role model for other possible types of closer Air Force and Navy force integration in areas where the air and maritime operating domains intersect.

### *Su-33: Russia's Carrier-Borne Strike Fighter*

Hugh Harkins, 2019-07-07 The intent of this volume is to detail the Sukhoi Su-33 (Su-27K) fourth generation naval strike fighter aircraft design procured for service aboard the Soviet Union (later Russian Federation) Project 1143.5 Aircraft Carrying Heavy Cruiser, Admiral of the Fleet of the Soviet Union, Kuznetsov. The volume covers the evolution of the T-10K, which was developed for service as the Su-33, and the limited updates introduced. All technical information regarding the aircraft, systems and weapons have been provided by the respective designers/developers, as has most of the graphic material, with technical and graphic input from other entities such as the Ministry of Defence of the Russian Federation. Certain elements of text, where pertinent, are taken from the volume 'Sukhoi Su-27SM(3)/SKM' (Harkins, 2016) and 'Russian/Soviet Aircraft Carrier & Carrier Aviation Design & Evolution Volume 2' (Harkins, 2017). No attempt is made to detail the Su-27KUB experimental design or the Chinese Su-33 copy, the Shenyang J-15, which are outside the scope of the volume, although both are referred to in the addendum.

### The Dawn of Carrier Strike David

Hobbs, 2019-07-30 A biography of a British pilot set against the backdrop of the Royal Navy's fight to regain control of its aviation after the First World War. The establishment of the RAF came at a cost—and it was the Royal Navy that paid the price. In 1918 it had been pre-eminent in the technology and tactics of employing aircraft at

sea, but once it lost control of its own air power, it struggled to make the RAF prioritize naval interests, in the process losing ground to the rival naval air forces of Japan and the United States. This book documents that struggle through the cash-strapped 1920s and '30s, culminating in the Navy regaining control of its aviation in 1937, but too late to properly prepare for the impending war. However, despite the lack of resources, British naval flying had made progress, especially in the advancement of carrier strike doctrine. These developments are neatly illustrated by the experiences of Lieutenant William Lucy, who was to become Britain's first accredited air 'ace' of the war and to lead the world's first successful dive-bombing of a major warship. Making extensive use of the family archive, this book also reproduces many previously unseen photographs from Lucy's album, showing many aspects of life in the Fleet Air Arm up to the end of the Norway campaign. The inter-war concentration on carrier strike would be spectacularly vindicated during World War II—and it was the Royal Navy that had led the way.

*Essex-Class Aircraft Carriers 1945–91* Mark Stille, 2022-09-15 A history of the enduring Essex-class ships, the US Navy's finest and most

numerous fleet carrier during World War II, which were modernized repeatedly and served with distinction. The Essex class was the USN's war-winning ship class of the Pacific War. Of the 24 ships completed, 14 saw action, making the Essex class the largest class of fleet aircraft carriers ever built. These ships had a fine balance of striking power, protection, and speed and were modernized during and after the war. There were five distinct programs carried out, adding not only angled flight decks for jet operations, but repeated upgrades to sensors, weapons, and equipment. Essex-class carriers were used in a number of roles and provided the vast majority of US Navy air power in the Korean War, and a sizeable proportion of air power in the Vietnam conflict. However, as the "super carriers" began to enter service in the early 1960s, the Essex class was relegated to secondary roles— a single Essex carrier served until 1991 as the US Navy's training carrier. Using detailed artwork and photos, this book provides an in-depth portrait of this important and enduring class of ship, and looks at its development and modifications while considering the many and varied actions it took part in.
