Caudron Cr. 714 C1 Cyclone Bartłomiej Belcarz, Kari Stenman, 2010-12 This book describes, in previously untold detail, the story of the development and service of the Caudron-Renault CR.714C1 Cyclone in the French and Finnish Air Forces. Whilst the concept of lightweight fighters was examined in many countries before and during WW2, the little Caudron was one of the very few to see production and service. On operations its limitations were cruelly exposed, but this did not stop its pilots (French, Polish and Finnish) from doing their very best, and this book is dedicated to their bravery. Comprehensively illustrated with photos, scale plans, detail drawings and color profiles, this book is essential reading for enthusiasts and historians of air combat in WW2.

Geochemistry and Geophysics of Active Volcanic Lakes T. Ohba,B. Capaccioni,C.

Caudron,2017-05-23 Volcanoes sometimes host a lake at the Earth's surface. These lakes are the surface expressions of a reservoir, often termed a hydrothermal system, in highly fractured, permeable and porous media where fluids circulate. They can become monitoring targets since they integrate the heat flux discharged by an underlying magma body and condense some volcanic gases. Since they trap volcanic heat and gases, they are excellent tools to provide additional information about the status of a volcano and volcanic lake-related hazards. This Special Publication comes at an exciting time for the volcanic lake community. It brings together scientific papers, which include studies of their structure, hydrogeological modelling, long-term multi-disciplinary monitoring efforts, as well as a number of innovative methods of sampling, data acquisition and in situ and laboratory experiments. Several papers challenge long-established paradigms and introduce new concepts and terminologies. This collection of papers will be a useful reference for researchers dealing with volcanic lakes and more generally with hydrothermal systems, phreatic/hydrothermal eruptions and wet volcanoes.
