Transplantation E-Book John L. R. Forsythe, 2013-06-24 Transplantation meets the needs of surgeons in higher training and practising consultants for a contemporary and evidence-based account of this sub-specialty that is relevant to their general surgical practice. It is a practical reference source incorporating the most current information on recent developments, management issues and operative procedures. The text is thoroughly referenced and supported by evidence-based recommendations wherever possible, distinguishing between strong evidence to support a conclusion, and evidence suggesting that a recommendation can be reached on the balance of probabilities. This is a title in the Companion to Specialist Surgical Practice series whose eight volumes are an established and highly regarded source of information for the specialist general surgeon. The Companion to Specialist Surgical Practice series provides a current and concise summary of the key topics within each major surgical sub-specialty. Each volume highlights evidence-based practice both in the text and within the extensive list of references at the end of every chapter. An expanded authorship team across the series includes additional European and World experts with an increased emphasis on global practice. The contents of the series have been extensively revised in line with recently published evidence. Modern techniques in transplantation and new forms of immunosuppression are

emphasised throughout this volume. The substantial interest in new organ perfusion and in the preservation techniques in organ donation and transplantation are reflected in a new chapter written by an international expert. All the chapters reflect transplant care as a multi-disciplinary team of clinicians working in a collaborative fashion.

Principles of Pulmonary Protection in Heart Surgery Edmo Atique Gabriel, Tomas Salerno, 2010-10-05 Over the past 75 years, advanced techniques and strategies have arisen in the field of myocardial protection. Meticulous trials, focusing on pulmonary protection during heart surgery requiring cardiopulmonary bypass (CPB), have been missing. This textbook is intended to serve as a useful tool to spread information on strategies for lung protection during heart surgery with CPB. Emphasis on pulmonary protection will be turned to lung perfusion as an adjunct for minimizing the deleterious effects of pulmonary ischemia-reperfusion injury in heart surgery. Many renowned authors have contributed by presenting their experience on lung perfusion in basic research and clinical trials. Furthermore, they have enlightened the quality of this textbook with new ideas, concepts, and future perspectives. The scope of this textbook is of interest to different professionals, such as cardiovascular surgeons, pulmonary surgeons, transplantation physicians, cardiothoracic anesthesiologists, intensive care physicians, cardiothoracic fellows, radiologists, basic sciences physicians, cardiologists, pulmonary medicine physicians, perfusionists, nurses, students, and researchers. This textbook has 7 sections, aimed at addressing general and specific aspects of pulmonary protection during heart surgery with CPB. The first section on general concepts provides information about anatomic, physiologic, histologic, molecular, and radiologic considerations regarding the lungs. The second section focuses on ischemia-reperfusion injury and is composed of several interesting chapters, addressing the basic science aspects of pulmonary protection, as well as experimental and clinical experiences from different heart surgery centers worldwide.

Transplantation Immunology Philip Hornick, 2008-02-05 Leading clinicians and scientists in solid organ transplantation review the current status of the field and describe cutting-edge techniques for detecting the immune response to the allografted organ. The authors present the latest techniques for HLA typing, detecting HLA antibodies, and monitoring T-cell response, and examine more specialized methods utilizing proteomics, laser dissection microscopy, and real-time polymerase chain reaction. The area of tolerance induction and reprogramming of the immune system is also covered, along with a discussion of up-to-date methods of organ preservation, of today's optimal immunosuppressive drug regimens, as well as the difficulty of mimicking chronic rejection in experimental models. Introductory chapters provide a theoretical update on current practices in renal, liver, islet, and lung transplantation and on the pathways of antigen presentation and chronic rejection.

Organ Donation and Transplantation after Cardiac Death David Talbot, Anthony D'Alessandro, 2009-03-12 With the success of organ transplantation and the declining number of heart beating cadaver donors, the number of patients awaiting a transplant continues to rise. This means that alternative sources of donors have been sought, including donors after cardiac death. Such donors sustain rapid damage to their organs due to ischaemia, and as a consequence some organs do not work initially and some none at all. The proportion of such transplants has increased dramatically in recent years- 25% of kidney transplants in the UK were from such donors in 2006 highlighting how much progress has been made. Written by international experts, this book lays out the moral, legal and ethical restraints to using such donors for organ transplant together with the techniques that have been adopted to improve their outcome. The different approaches and results of renal transplant according to country are covered together with the procedures and outcomes adopted to use other organs, notably the liver and lungs.

Transplantation of the Pancreas Rainer W. G. Gruessner, Angelika C. Gruessner, 2023-10-23 Now in its fully revised and expanded second edition, this textbook remains the definitive resource on pancreas transplantation. Enlarged, updated and improved, it consists of 93 chapters over 11 sections, with chapter authors who are recognized international leaders in their fields and represent institutions from five continents. Since the publication of the original edition in 2004, substantial progress has been made in the field of pancreas transplantation, specifically in regard to standardization of operative techniques and immunosuppression; significant improvements in patient and graft survival rates; and improved diagnosis and therapy of graft

rejection and recurrence of disease. Pancreas transplants are no longer primarily performed in the USA and Europe for Type 1 diabetes mellitus; over the past 15 years, they have been performed with increasing frequency worldwide and also for Type 2 diabetes mellitus. The new edition of this textbook covers all aspects of pancreas transplantation: indications, recipient categories, surgical donor and recipient techniques, living donor transplantation, postoperative management and follow-up, post-transplant complications and malignancies, immunosuppression, treatment and diagnosis of rejection, impact on endocrine function and secondary complications of diabetes, recurrence of disease, quality of life, economic issues and overall outcome results. In addition, state-of-the art chapters focus on the classification, epidemiology and pathogenesis of Type 1 and 2 diabetes mellitus as well as on other beta-cell replacement therapies including islet auto- and allo-transplantation. This textbook is the primary reference on pancreas transplantation for transplant surgeons (established and in-training), pancreas and HPB surgeons, diabetologists, endocrinologists, gastroenterologists, pancreatologists and other health professionals with a focus on transplantation and diabetes (cardiologists, neurologists, urologists, ophthalmologists).
