A K-pop Live Suk-Young Kim,2018-08-07 “A glittering glimpse into a pure realization of late capitalism, and . . . our collective future . . . uncovers why K-pop is the global cultural phenomenon.”
—Carol Vernallis, author of *Unruly Media: YouTube, Music Video, and the New Digital Cinema* 1990s South Korea saw the transition from a military dictatorship to a civilian government, from a manufacturing economy to a postindustrial hub, and from a cloistered society to a more dynamic transnational juncture. In *K-pop Live*, Suk-Young Kim investigates the ascent of Korean popular music in relation to the rise of personal technology and social media. Based on in-depth interviews with K-pop industry personnel, media experts, critics, and fans, as well as archival research, *K-pop Live* explores how the industry has managed the tough sell of live music in a marketplace in which virtually everything is available online. Teasing out digital media's courtship of liveness in the production and consumption of K-pop, Kim investigates the nuances of the affective mode in which human subjects interact with one another in the digital age. Observing performances online, in concert, and even through the use of holographic performers, Kim offers readers a step-by-step guide through the K-pop industry's variegated efforts to diversify media platforms as a way of reaching a wider global network of music consumers. In an era when digital technology inserts itself into nearly all social relationships, Kim reveals how what is live becomes a question of how we exist as increasingly mediated subjects. “Lively insights into the complexities of the artistry and the commerce, the manufactured and the impromptu, the virtual and the somatic, and the local and the global that propel the production [and] consumption of Korean popular music today.” —Hyung-Gu Lynn, University of British Columbia

Component-Based Software Engineering Ivica Crnkovic, Judith A. Stafford, Heinz W. Schmidt, Kurt

Wallnau, 2004-05-26 Component-based software engineering (CBSE) is concerned with the development of software-intensive systems from reusable parts (components), the development of such reusable parts, and the maintenance and improvement of systems by means of component replacement and customization. Although it holds considerable promise, there are still many challenges facing both researchers and practitioners in establishing CBSE as an efficient and proven engineering discipline. Six CBSE workshops have been held consecutively at the most recent six International Conferences on Software Engineering (ICSE). The premise of the last three CBSE workshops was that the long-term success of component-based development depends on the viability of an established science and technology foundation for achieving predictable quality in component-based systems. The intent of the CBSE 2004 symposium was to build on this premise, and to provide a forum for more in-depth and substantive treatment of topics pertaining to predictability, to help establish cross-discipline insights, and to improve cooperation and mutual understanding. The goal of the CBSE 2004 symposium was to discuss and present more complete and mature works, and consequently collect the technical papers in published proceedings. The response to the Call for Papers was beyond expectations: 82 papers were submitted. Of those 25 (12 long and 13 short) were accepted for publication. In all 25 cases, the papers were reviewed by three to four independent reviewers. The

symposium brought together researchers and practitioners from a variety of disciplines related to CBSE.

Fundamental Approaches to Software Engineering Michel Wermelinger, Tiziana Margaria-Steffen, 2004-03-01 ETAPS 2004 was the seventh instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised 5 conferences (FOSSACS, FASE, ESOP, CC, TACAS), 23 satellite workshops, 1 tutorial, and 7 invited lectures (not including those that are specific to the satellite events). The events that comprise ETAPS address various aspects of the system development process, including specification, design, implementation, analysis and improvement. The languages, methodologies and tools that support these activities are all well within its scope. Different blends of theory and practice are represented, with an inclination towards theory with a practical motivation on the one hand and soundly based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.
