Cinema of Swords Lawrence Ellsworth,2023-06-15 Cinema of Swords is a history, guide, and love letter to over four hundred movies and television shows featuring swashbucklers: knights, pirates, samurai, Vikings, gladiators, outlaw heroes like Zorro and Robin Hood, and anyone else who lives by the blade and solves their problems with the point of a sword. Though swordplay thrives as a mainstay of current pop culture—whether Game of Thrones or Lord of the Rings or Star Wars—swashbuckling was if anything even more ubiquitous during Hollywood’s classic period, from its foundations in the Silent Era up through the savage bursts of fantasy films in the ‘80s. With this huge cinematic backlist of classics now available online and on-demand, Cinema of Swords traces the roots and branches of this unruly genre, highlighting classics of the form and pointing fans toward thrilling new gems they never knew existed. With wry summaries and criticism from swordplay expert Lawrence Ellsworth, this comprehensive guidebook is perfect as a reference work or as a dazzling Hollywood history to be read end-to-end.

A Kabuki Reader: History and Performance Samuel L. Leiter,2015-02-12 Unique in any Western language, this is an invaluable resource for the study of one of the world's great theatrical forms. It includes essays by established experts on Kabuki as well as younger scholars now entering the field, and provides a comprehensive survey of the history of Kabuki; how it is written, produced,

staged, and performed; and its place in world theater. Compiled by the editor of the influential Asian Theater Journal, the book covers four essential areas - history, performance, theaters, and plays - and includes a translation of one Kabuki play as an illustration of Kabuki techniques.

Systematic Pomology (Vol. 1-2) (Set) O.P. Pareek, Suneel Sharma, 2017-01-01 The book is aimed to be a treatise on the 'Systematic Pomology', the primary component of science of fruits, dealing with identification, nomenclature and classification of fruit species based on the descriptions of characteristics related to their morphological, genetical, physiological, biochemical, biotechnological and eco-attributes. Besides taxonomic narrative of each species under the respective orders and

genera, considerable emphasis has been laid on cultivars. The treatment is based on the latest version of Nomenclature and Phylogenetic System of Classification (APG III). The book is richly illustrated with diagrams and colour plates and carries fairly exhaustive bibliography and glossary. Thus, the book is of high academic value for research workers/teachers, students and anyone interested in advanced fruit culture to provide insight in identifying and classifying fruit plants, providing standard nomenclature and terminology, in avoiding the confusion from synonymy and promoting correct labeling, to understand their genetic relations, in establishing or maintaining a garden, a germplasm bank, a research orchard or even herbaria, in identification of new genotypes or cultivars for introduction and in deciding orchard management practices as well as methods of utilization, in using the correct related cultivars kept in a genetic resources repository for improvement considering the limits of hybridization, and in selecting genetic material for a breeding programme considering their taxonomic proximities and specific characters related to fruit bearing, regularity, nutritive and edible quality, resistance to biotic and abiotic stresses and plant stature and form.
