Major Lyricists of the Northern Sung James J.Y. Liu,2015-03-08 The tz'u, or lyric, reached its full maturity in China during the eleventh century and the first quarter of the twelfth. Until now this important poetic genre has been little known to English readers, and James J. Y. Liu's book is the first to deal systematically and critically with it. He does so by examining the work of six representative poets of the period. The poems are analyzed in terms of their exploration of worlds, by which the author means the poet's probing of the natural world and the human world in which he lives, as well as of his own mind. This leads into a discussion of the poet's exploration of language, his incessant effort to embody the worlds he explores in complex verbal structures and to realize the potentialities of the Chinese language as a medium of poetic expression. Preceding the general discussion of each lyricist's poetry are examples of the work of each in four forms: first in the original Chinese text, then in a romanization, next in a word-for-word translation, and finally in an idiomatic translation. Each poem is accompanied by a metrical diagram, explanatory notes, and a critical commentary. Attention is focused on poetic qualities and features such as diction, imagery, syntax, and prosody. The Art of Prolog, second edition Leon S. Sterling,Ehud Y. Shapiro,1994-03-10 This new edition of The Art of Prolog contains a number of important changes. Most background sections at the end of each chapter have been updated to take account of important recent research results, the references have been greatly expanded, and more advanced exercises have been added which have been used successfully in teaching the course. Part II, The Prolog Language, has been modified to be compatible with the new Prolog standard, and the chapter on program development has been significantly altered: the predicates defined have been moved to more appropriate chapters, the section on efficiency has been moved to the considerably expanded chapter on cuts and negation, and a new section has been added on stepwise enhancement—a systematic way of constructing Prolog programs developed by Leon Sterling. All but one of the chapters in Part III, Advanced Prolog Programming Techniques, have been substantially changed, with some major rearrangements. A new chapter on interpreters describes a rule language and interpreter for expert systems, which better illustrates how Prolog should be used to construct expert systems. The chapter on program transformation is completely new and the chapter on logic grammars adds new material for recognizing simple languages, showing how grammars apply to more computer science examples.
