

Coelacanth

Mike Bruton

Coelacanth Valerie J. Weber, 2005 Describes the physical characteristics of a fish that is thought to have lived 400 million years ago.

Fossil Fish Found Alive Sally M. Walker, 2002 Describes the 1938 discovery of the coelacanth, a fish previously believed to be extinct, and subsequent research about it.

The Amazing Coelacanth Mike Bruton, 2018-04-01 This colourful illustrated children's book is aimed at ages 9-14. It recounts the discovery of the first coelacanth in modern times – a fish that had been thought to be extinct for many millions of years, and was known only from its fossil record. In 1939, a specimen was hauled ashore in a fishing net off the South African coast near East London, and its identification as a coelacanth made world news. Chemistry professor JLB Smith identified the fish and dedicated the rest of his life to searching for live specimens and researching the science surrounding this evolutionary phenomenon. This book, by ichthyologist Mike Bruton, uncovers: the mystery of the coelacanth and the thrilling story of its discovery, its strange appearance and lifestyle, what makes it so special, how it evolved – and what this has to do with human evolution, how and what it eats, and who eats it. These and many other details provide insight into this amazing fish and its marine companions.

Mystery Fish Sally M. Walker, 2008-01-01 The author tells the story of the discovery of and attempt to study the Coelacanth, a fish thought to have become extinct at the same time as the dinosaurs.

The Search Beneath the Sea J. L. B. Smith, 2017-07-31 ONE OF THE GREAT BOOKS OF SCIENTIFIC ADVENTURE...STRANGER THAN FICTION One of the most sensational discoveries in natural history, told by the ichthyologist who was directly involved in its first capture off the South African coast in 1938. Prior to this, the fish, although

known to scientists, was thought to have become extinct at least fifty million years ago. There was much professional scepticism that it was indeed a coelacanth and Professor Smith had many battles ahead of him before proof could be found. A remarkable story.

Living Fossil: The Story of the Coelacanth Keith Stewart Thomson, 1992-07-17 Tells the story of a fish, the coelacanth, thought extinct for 70 million years, which was discovered in 1938 in the Indian Ocean.

History of the Coelacanth Fishes Peter Forey, 1997-11-30 This book evaluates the reputation of the coelacanth, presenting up-to-date accounts of the structure of fossil coelacanths, and suggests a family history to show that there have been subtle but significant changes in coelacanth history.

A Fish Caught in Time Samantha Weinberg, Fourth Estate, 2001-02-06 The coelacanth (see-lo-canth) is no ordinary fish. Five feet long, with luminescent eyes and limb like fins, this bizarre creature, presumed to be extinct, was discovered in 1938 by an amateur ichthyologist who recognized it from fossils dating back 400 million years. The discovery was immediately dubbed the greatest scientific find of the century, but the excitement that ensued was even more incredible. This is the entrancing story of that most rare and precious fish -- our own great-uncle forty million times removed.

The Coelacanth Mary J. Nickum, 2016-12-04 The primitive-looking coelacanth (pronounced SEEL-uh-kanth) was thought to have gone extinct with the dinosaurs 65 million years ago. But its discovery in 1938 by a South African museum curator on a local fishing trawler fascinated the world and ignited a debate about how this bizarre lobe-finned fish fits into the evolution of land animals. There are only two known species of coelacanths: one that lives near the Comoros Islands off the east coast of Africa, and one found in the waters of Sulawesi, Indonesia. Many scientists believe that the unique characteristics of the coelacanth

represent an early step in the evolution of fish to terrestrial four-legged animals like amphibians.--Back cover.

Coelacanth Peter L. Forey, 2009 The purpose of this book is to give an account of the life and times of a single species of fish, *Latimeria chalumnae*- the coelacanth (or are there now two species?). Before the discovery of the modern *Latimeria*, relationships of the coelacanths were thought to lie with the rhipidistians, a group of fossil fishes that many think are tetrapod ancestors. Hence, by looking at the modern coelacanth and assuming conservatism we may be able to reconstruct the life of the 'missing link' between fishes and tetrapods. The coelacanth is the only living animal to retain some structural characteristics that were certainly present in the tetrapod ancestors, such as the intracranial joint. Therefore it is of some interest to try and find out how this joint works and what it is there for. The gene pool of the coelacanth has been separated from that of all other living vertebrates for at least 360 million years. Therefore, it is of some interest to find out how much deviation from contemporaneous fishes there has been. Coelacanths have often been used as the classic example of a particular evolutionary pattern whereby evolution is very fast in the early years and then slows down to stability and finally stagnation. This needs to be evaluated in the light of what we now know of the history of the coelacanths as a genetic lineage.

The Annotated Old Four Legs Mike Bruton, 2017-11-01 When the famous South African fish scientist Professor JLB Smith published *Old Fourlegs - The Story of the Coelacanth* in 1956 he created an international sensation. After all, this 400-million-year-old fish, known only from fossil remains, was thought to have become extinct around 66 million years ago! JLB Smith's dramatic account of the discovery of the first and second coelacanths in 1938 and 1952 turned him into a cult figure and put South African science on the world map. His book was eventually published in six English editions and translated into nine foreign

languages. Mike Bruton's *The Annotated Old Fourlegs* includes a facsimile reprint of the original book, to which he has added notes and images in the margins that provide an interesting and revealing commentary on Smith's text, as well as new introductory and explanatory chapters that bring the coelacanth story up to date.

The Long Lost Coelacanth Aliki, 1973-01-01 Describes the Coelacanth, a fish thought to have been extinct for seventy million years until one was discovered in 1938, and other examples of plants and animals known as living fossils.

Fish Caught in Time Samantha Weinberg, 2001-02-01 Thought to be long extinct, a five-foot long fish with luminescent eyes and limblike fins was discovered in 1938 by an ichthyologist who recognized it from fossils dating back 400 million years. This

account reveals the international controversy sparked by the coelacanth's discovery, and how it all came together in 1998 in a gripping climax. Photos & illustrations.

The Long Lost Coelacanth ,1973 Describes the Coelacanth, a fish thought to have been extinct for seventy million years until one was discovered in 1938, and other examples of plants and animals known as living fossils.

Living Fossil Keith Thomson,1991-01 Off the coast of Southern Africa a fishing boat drags in a strange creature. A museum curator and a fish expert realize that they are looking at an animal from another time. This is a tale of modern science - chance capture, international rivalry and the obsessive personalities of the scientists. The coelacanth lives in the deep waters around one group of tiny islands. Why? Can it survive? What other forgotten creatures remain to be discovered?
