The Ships of Battlestar Galactica Jo Bourne, Neil Kelly, Richard Mead, Alice Peebles, 2020-08-04 Featuring the ships from Universal Pictures' original 1978 US TV series and the reimagined series from 2003! The first and only complete encyclopedia of all the ships from both series. The perfect holiday gift for the Battlestar Galactica fan in your life! THIRTY EIGHT SHIPS FROM THE COLONIAL AND CYLON FLEETS With ships of both the Colonial Fleet and the Cylons from the original 1978 US TV series, the reimagined series from 2003, and the ten-part web series Blood & Chrome, this book provides in-universe profiles and plans of the key spacecraft of the shows with detail that has rarely - if ever - been seen before. The Science Fiction series Battlestar Galactica first screened on US TV in 1978 and ran for 34 episodes. The groundbreaking show, with its dramatic premise, all-star cast and sensational space adventure, acquired a huge popular following and quickly became a best-loved show among fans of science science fiction and beyond. The show returned to TV screens in 2003 in a critically acclaimed and award-winning reimagined series, with Time Magazine naming it one of the '100 Best TV Shows of All Time.' Each ship is illustrated in CG artwork, including original visual effects models made for the TV show, alongside detailed technical specifications, service history, and annotated views of the ships features.

Battlestar Galactica: Designing Spaceships Paul Ruditis, Mark Wright, 2021-11-16 This new book goes behind the scenes on the award-winning TV series Battlestar Galactica to discover the concepts behind the designs of dozens of spaceships! Battlestar Galactica debuted on TV in 1978 and acquired a phenomenal following, breaking new ground for TV drama and winning several awards. It returned to TV screens in 2003 in a critically acclaimed reimagined series, with Time Magazine naming it one of the 100 Best TV Shows of All Time. This behind-the-scenes guide looks at the creation of the ships in both the original and the reimagined series, including vessels of the ragtag fleet and those of the Cylon enemy. Featuring artwork from the groundbreaking first series and the 2004 reimagined series, this volume explores the art of ship creation from the first sketches to the finished designs of the modelmakers. Covering 18 key ships from the two shows, including the Galactica itself, the Vipers and the Cylon Raiders, the pages are packed with original concept art from designers Eric Chu, Andrew Probert and legendary artist Ralph McQuarrie.

Eleonora's Falcon Harmut Walter, 1979-05 Named after a Sardinian princess of the fourteenth century who established laws protecting falcons, Eleonora's falcon is the only European bird to breed in autumn and feed its brood on the mass of birds that migrate from Europe to Africa between July and October. It breeds on small Mediterranean islands in colonies of up to 200 pairs and hunts often in groups, preying on more than 90 species of migrant birds. During the winter this falcon visits the rain-soaked woodlands of Madagascar. In this study-illustrated beautifully and extensively with 59 line drawings and 38 photographs-Harmut Walter shows how the unique geographical and

biological situation of *Falco eleonora* makes the species' health an important indicator of environmental decay. For though it lives in relatively isolated areas, Eleonora's falcon nevertheless may ingest the many pollutants contained in its diet of birds migrating from industrial Europe. Walter, who has studied raptors on several continents and has been an ornithologist since his early youth, examines several discrete colonies of Eleonora's falcon. He concentrates on the species' intraspecific behavior and ecology—such as the falcons' aggressive actions, hunting strategies, and response to fluctuating environmental conditions—and investigates their evolutionary past.

Behavioural Ecology of Western Palearctic Falcons Giovanni

Leonardi, 2020-12-07 This monograph is the result of eight years of bibliographical and field research concerning several behavioural ecology aspects of the Palearctic falcons. For a while, this book grew along with “The Lanner falcon” published in 2015 and revised in 2017. In both books the main aim was to provide a clear overview of the biology and ecology of these species. In fact in the last 20 years, the number of publications on falcons has grown tremendously and, in parallel, also those belonging to the so-called grey literature. The number of people involved is also increased by including both academics and nature lovers. Many previously published books emphasized identification, and offered little insights on the behavioural and ecological aspects of the species. Very often, the research on behavioural ecology remains closed within the confines of academic community. By contrast, a multitude of basic data is scattered in countless articles published in local magazines. Many falcon species are easy to observe and study (such as kestrels) but others are more rare and localized. In order to understand the survival strategies adopted by this group of avian predators, it is necessary not to lose sight of the overall picture. This book tries to explain the different survival strategies by examining, through a few essential chapters, some crucial aspects for all species. The first chapter provides information on the genus *Falco*, its genetics, evolution and morphological peculiarities. The other chapters deal with reproductive strategies, competition, exploitation of resources, dispersal patterns, communication and sociality. One of the main objectives of this book is to produce an accessible but scholarly curated source of reference. By understanding the most common species, it is possible to provide a working framework for rarer, and especially threatened, falcon species.

The Life of a Colonial Blacksmith Sandra J. Hiller, 2013-07-15 Colonial blacksmiths not only fashioned objects from iron, but they were also sometimes involved in other trades, such as veterinary medicine. Readers will follow a day in the life of a blacksmith in this graphic book. Based on the life of a real blacksmith of record.

The Private Lives of Birds Bridget Stutchbury, 2011-04-10 Biologist Bridget Stutchbury takes readers along on her escapades as a bird detective, stalking subjects through the woods for hours, taking blood samples from nestlings for DNA analysis, and mounting miniature tracking devices on tiny backs. She captures several young white-and-brown male purple martins and paints them the darker color of mature males to see if the painted youngsters are more successful than their unaltered peers in wresting away nest sites from older males. They are! *The Private Lives of Birds* is a treasure trove of fascinating insights into bird behavior. But understanding the social lives of birds does much more than slake our curiosity. Aware that many birds will

not occupy an area unless other birds are already there, biologists used mirrors and two-dimensional cutouts to lure Atlantic puffins to establish colonies off the coast of Maine, getting curious puffins to visit the site and linger long enough to encounter a live bird. As Stutchbury says, Trying to save birds without understanding what makes them tick is a shot in the dark ... birds are highly social, and their social needs are at least as important as their physical needs.

Raptor Research Report ,1971

Migration Strategies of Birds of Prey in Western Palearctic Michele Panuccio,Ugo Mellone,Nicolantonio Agostini,2021-07-28 Given their roles in the ecosystem, raptors are widely considered the flagship or umbrella species among birds. Most species undertake a seasonal journey that is impressive because of the length, and the imposing natural barriers such as deserts and seas that they fly over. The migration of birds of prey has unique characteristics in the animal world because of their morphology and flight style. The flying path of Afro-Palearctic migrants between breeding and wintering grounds is determined by several factors such as morphology of the birds, geography, behavioural adaptations. The book analyses the migration patterns of raptors along the Afro-Palearctic migratory system, and summarizes the recent research on these top predator species. Behavioural adaptations such as the importance of social interactions and the modulation of the different flight styles as well as ecological interactions with the encountered environment and weather conditions en route are described in the book. Moreover, the impact of climate change on the migratory behaviour and key conservation issues are discussed. The book provides an overview of the migratory characteristics and flyway patterns of all European raptors species and also some Asian ones. These chapters have been written by some of the most important raptor specialists, giving a complete picture of the different migration strategies on the basis of both traditional methods and new technologies.

Situational Identities Along the Raiding Frontier of Colonial New Mexico Jun U. Sunseri,2018-02-01 *Situational Identities along the Raiding Frontier of Colonial New Mexico* examines pluralistic communities that navigated between colonial and indigenous practices to negotiate strategic alliances with both sides of generations-old conflicts. The rich history of the southwestern community of Casitas Viejas straddles multiple cultures and identities and is representative of multiple settlements in the region of northern New Mexico that served as a "buffer," protecting the larger towns of New Spain from Apache, Navajo, Ute, and Comanche raiders. These genízaro settlements of Indo-Hispano settlers used shrewd cross-cultural skills to survive. Researching the dynamics of these communities has long been difficult, due in large part to the lack of material records. In this innovative case study, Jun U. Sunseri examines persistent cultural practices among families who lived at Casitas Viejas and explores the complex identities of the region's communities. Applying theoretical and methodological approaches, Sunseri adds oral histories, performative traditions of contemporary inhabitants, culinary practices, and local culture to traditional archaeology to shed light on the historical identities of these communities that bridged two worlds.

Population Ecology of Raptors Ian Newton, 2010-11-30 Dr Newton's book is concerned with all aspects of population regulation in diurnal birds of prey, their social behaviour, dispersion, numbers, movements, breeding and mortality. He has drawn on his own studies in Scotland and on material and investigations worldwide to produce an authoritative and stimulating synthesis of current thinking and research on the ecological problems of the Falconiformes. He also deals in detail with the effects of pesticides and other pollutants on these birds, and with their scientific management and conservation. The author's lucid style will ensure a wide readership among research workers and the more general audience with an interest in birds of prey. There is a full bibliography and an extensive appendix of tables.

The Common Buzzard Sean Walls, Robert Kenward, 2020-01-23 'Based on many years of personal research, and a thorough knowledge of the European literature, the authors provide an eminently readable account of the biology of the Common Buzzard. Whatever your interests in birds, I can recommend this book for its content of information and insight.' – Professor Ian Newton OBE, FRS, FRSE Soaring majestically on thermals with broad wings raised, the Common Buzzard is a familiar sight for many people across Eurasia. In fact, thanks to a remarkable ability to adapt to local conditions, it is now one of the most abundant hawks in the world. The Common Buzzard can exploit a variety of nest sites, and has an eclectic diet that ranges from earthworms and voles to woodpigeons and even deer carcasses. This is a species rich in paradoxes. Why does a hawk evolved for hunting small mammals thrive on invertebrates and carrion? How can a raptor renowned for dramatic territorial displays occur at such high densities? And why does such a large bird that can travel long distances spend so much time in small areas? Sean Walls and Robert Kenward delve deep into the ecology of the Common Buzzard to provide answers to these questions and many more, as well as examining the conservation conundrums raised by this bird. Bringing together a wealth of research on the species' origins, feeding behaviour and breeding, along with information on movement and survival from the authors' own studies, *The Common Buzzard* provides an invaluable insight into exactly what has enabled this marvellous raptor to return to old haunts to impress, inspire and

connect people with nature.

Environmental Research Trends Marin A. Cato, 2007 The environment consists of the surroundings in which an organism operates, including air, water, land, natural resources, flora, fauna, humans and their interrelation. It is this environment which is both so valuable, on the one hand, and so endangered on the other. And it is people which are by and large ruining the environment both for themselves and for all other organisms. This book reviews the latest research in this field which is vital for everyone.

Aeroecology Phillip B. Chilson, Winifred F. Frick, Jeffrey F. Kelly, Felix Liechti, 2018-03-23 This book consists of a diverse collection of chapters that seeks to broaden our fundamental understanding of the ecological function and biological importance of the Earth's lower atmosphere, which provides a huge living space for billions of animals moving within and across continents. Their migration, dispersal and foraging activities connect water and land habitats within and across continents. Drawing upon the wide-ranging experience of the authors, the book takes an inherently interdisciplinary approach that serves to introduce the reader to the topic of aeroecology, frame some of the basic biological questions that can be addressed within the context of aeroecology, and highlight several existing and emerging technologies that are being used to promote aeroecological studies. The book begins with several background chapters, that provide introduction into such topics as atmospheric science, the concept of the habitat, animal physiology, and methods of navigation. It then continues with a broad discussion of observational methods available to and used by aeroecologists. Finally, several targeted examples of aeroecological studies are presented. Following the development of the chapters, the reader is provided with a unifying framework for investigating how the dynamic properties of meteorological conditions at local, regional, and global scales affect the organisms that depend on the air for foraging and movement. Material presented in the book should be of interest to anyone wishing to gain a comprehensive understanding of the aerosphere itself and the myriad airborne organisms that inhabit and depend upon this environment for their existence. The material should be accessible to a diverse set of readers at all stages of training and across a range of research expertise.
