M8 Greyhound Light Armored Car 1941–91 Steven J.

Zaloga,2012-09-20 The M8 light armored car was the only significant wheeled combat vehicle used by the US Army in World War II. In conjunction with the lightly armed utility version, the M20, it was the staple of the army's cavalry squadrons for use in reconnaissance and scouting. First entering combat in Italy in 1943, it was widely used throughout the campaign in northwest Europe, though its off-road performance was found to be wanting. This title describes the design and development of the M8, covering the many variants that were produced during World War II and afterwards, along with a comprehensive survey of its operational use.

Staghound Armored Car 1942–62 Steven J. Zaloga,2011-12-20 The Staghound was a unique World War II armored vehicle designed and manufactured in the US, but intended solely for the British army. Since its combat debut in Italy in 1943 until the end of the war it had performed particularly valuable service in a reconnaissance role

where its speed and armor ensured that it was able to extricate itself from trouble as required without additional support. This book examines the development of this category of armored cars and offers a detailed analysis of the extensive combat use of the Staghound in British service as well as in the service of other Allied countries including Canada, New Zealand and Poland.

Stryker Combat Vehicles Gordon L. Rottman, 2012-09-20 The eight-wheeled (8x8) Stryker combat light armored vehicle was adopted by the US Army in 2002 to provide a comparatively rapidly deployable contingency force with armor protection, tactical mobility, and heavy firepower, as well as advanced command, control communications, computer, intelligence, surveillance, and reconnaissance (C4ISR) capabilities. Covering the first new US Army release since the M1 Abrams MBT, this book details the conception, ongoing development and deployment of one of the most highly anticipated new AFVs in recent years, including its service in Iraq and the ensuing controversy surrounding the Stryker's varying successes.

Early US Armor Steven J. Zaloga, 2018-02-22 The first American armoured cars began to emerge around the turn of the century, seeing their first military use in 1916 during the Punitive Expedition against Pancho Villa. When the United States entered World War I, the American Expeditionary Forces used some armoured cars in France, and American armoured cars were used by the French Army. The inter-war years saw considerable innovation and experimentation in armoured car design. Of the 1930s scout car designs, the M3A1 scout car was good enough to be produced in very large numbers in World War II, and was widely exported to many other armies via Lend-Lease. It also served as the basis for the late M2 and M3 armoured half-tracks. In this study, using detailed full colour plates and rigorous analysis, US armour expert Steven J. Zaloga chronicles the development of the US armoured car in the years leading up to World War II.

American Armored Fighting Vehicles George Bradford, 2007-02-07 Technical artist and military historian George Bradford has been producing detailed drawings of armored fighting vehicles for over thirty years. Based on meticulous research of actual vehicles, official photographs, factory specifications, and, in some cases, the original design plans, each drawing is rendered with great precision--and in exact scale--offering military enthusiasts and modelers an essential reference on these steel chariots of war. Filled with fine-scale drawings of America's tanks and other armored vehicles during the entire course of World War II. • M2 Halftrack • M3 Lee/Grant Tank • M3A3 Stuart Tank • M4 Sherman Tank • Staghound Armored Car • LVT Amphibious Tank • And dozens more ...

American Wheeled Armoured Fighting Vehicles Michael

Green,2016-10-31 Numerous wheeled armoured fighting vehicles have seen service in the US armed forces on and off for over 80 years. There have been various changes of policy and twice, after the Second World War and Vietnam, they went out of favour but their use is now well established. This well researched and superbly illustrated book describes all the different types and variants since the first M1 was ordered in 1931. The M8 armoured car was widely used during World War Two but it was not until Vietnam that further wheeled AFVs came into service, notably the M706 armoured car. After a lull the US Marine Corps adopted the Light Armoured Vehicle (LAV) in 1983. The US Army first used armoured Humvees in 1994 and variants remain in service (M1141 and M1116). Other types today include the Guardian (M1117) and the Army version of the LAV names the Stryker. To meet the operational requirements of Iraq and Afghanistan the Mine Resistant Ambush Protected vehicle (MRAP) was ordered in bulk from 2007.

Ford M8 and M20 David Doyle,2021-04-28 Developed to provide the US military with a fast-moving reconnaissance vehicle sufficiently armed to knock out WWII-era armored vehicles. The M8 Armored Car and its sibling, the M20 Armored Utility Vehicles, were the most widely used armored vehicles built by Ford. These vehicles saw use with the US Army as well as Allied nations during WWII and well into the 1960s. This book chronicles the development and use of the vehicle from concept to combat. Through dozens of archival photos, many never before published, as well as detailed photographs of some of the finest existent examples of these vehicles, this iconic tank is explored, and its history is explained.

The Army's Future Combat Systems Program and Alternatives, 2006 In today's environment of rapidly evolving conflicts, the Army's goal is to have units that have the combat power of heavy units but that can be transported anywhere in the world in a matter of days. To address concerns about the armored vehicle fleet's aging and the difficulties involved in transporting it as well as to equip the Army more suitably to conduct operations overseas on short notice using forces based in the United States the service created the Future Combat Systems (FCS) program in 2000. A major modernization effort, the program is designed in part to develop and purchase vehicles to replace those now in the heavy forces; the new vehicles would be much lighter, thereby easing the deployment of units equipped with them. In the analysis presented in this report, the Congressional Budget Office (CBO) examined the current status of the Army's fleet of armored vehicles and assessed the speed of deployment of the service's heavy forces. It also evaluated the FCS program, considering the program's costs as well as its advantages and disadvantages and comparing it with several alternative plans for modernizing the Army's heavy forces.

Combat Vehicle Training with Thermal Imagery, 1997 Three training effectiveness experiments were conducted on a computer-based, thermal combat vehicle identification program developed under the auspices of the Product Manager for Forward Looking

Infrared. The program included real thermal imagery of vehicles. The first experiment compared part-task training schedules. The second compared a self-paced trial procedure, which incorporated side by side visual corrective feedback, to a timed trial procedure, which gave only knowledge of results feedback. The third examined the effects of training at near versus far ranges. Thermal training substantially improved scores on both thermal and visible images of vehicles that had been trained, but not for other vehicles. long vehicle sets led to learning plateaus; shorter and multiple sets worked better. learning was more efficient and transfer was enhanced when soldiers responded at their own pace and received corrective visual feedback. Soldiers learned to discriminate vehicles at far ranges, although it took them twice as long as soldiers who trained on near imagery. Even with extensive training, some vehicle confusions persisted, indicating great similarity in thermal signatures for some vehicles. The findings were applied to the program. Efforts are continuing to refine it and to field it throughout the Army.--DTIC.

World War II Album Volume 6: M1 Combat Car - M2 Light Tank

Ray Merriam, 2014-07-11 Merriam Press World War II Album Volume 6 First Edition (2014) A pictorial album of the M1 Combat Car and the M2 Light Tank. The M1 Combat Car was a light tank used by the U.S. Cavalry in the late 1930s. After the Spanish Civil War, most armies, including the U.S. Army, realized that they needed gun armed tanks and not vehicles armed merely with machine guns, and so the M1 became obsolete. The M1 was the immediate predecessor of the M2 Light Tank. The Light Tank M2 was an American pre-World War II light tank that saw combat with the U.S. Marine Corps' 1st Tank Battalion on Guadalcanal in 1942, during World War II. Its service with the 1st Tank Battalion during the Pacific War was its

only U.S. combat use during the war; however, it is believed that M2A4s served in Burma and India with the British 7th Hussars and 2nd Royal Tank Regiment during their engagements with the Imperial Japanese Army's 14th Tank Regiment. The M2A4 was the immediate predecessor of the M3 Stuart series of light tanks, which saw widespread combat throughout the war, and the M2 Medium Tank, which was itself an unsuccessful design but served as predecessor for the M3 Lee and M4 Sherman. 217 B&W photos 5 color photos 3 drawings 1 cutaway drawing 1 sectional side view drawing 1 four-view drawing

The Army's Future Combat Systems Program and Alternatives

Frances M. Lussier, 2006

Army's Future Combat System (FCS); Background and Issues for Congress Andrew Feickert, 2011-01 This is a print on demand edition of a hard to find publication. The Future Combat System (FCS) was a multi-year, multi-billion dollar program at the heart of the Army's transformation efforts. It was to be the Army's major R&D, and acquisition program consisting of 14 manned and unmanned systems tied together by an extensive commun. and info. network. The FCS program has been characterized as a high-risk venture due to the advanced technologies involved and the challenge of networking all of the FCS subsystems together. Contents of this report: (1) Program Origins; (2) Program Overview; Current FCS Program Status; Army's Modernization Strategy; Budget Issues; (3) Issues for Congress: MGVCancellation; Army Modernization Strategy and Spin Outs; Proposed Ground Combat Vehicles. German Military Vehicles of World War II Jean-Denis G.G.

Lepage, 2014-11-18 This volume presents a cross-section of the most

common transport vehicles produced and used by the German army. Tanks plus auxiliary vehicles such as cars, motorcycles, vans, ambulances, trucks and tractors made it possible for the troops to keep moving. These lightly armored or unarmored vehicles--aka soft skins--operated behind the front lines, maintaining supply lines, connecting armies with their home bases, and ultimately determining the outcome of battle. Beginning with the development of military vehicles in the early 1930s, this volume discusses the ways in which this new technology influenced and, to some extent, facilitated Hitler's program of rearmament. Nomenclature, standard equipment, camouflage and the combat roles of the various vehicles are thoroughly examined. Individual vehicle types are arranged and discussed by the following classifications: cars and motorcycles; trucks and tractors; half-tracks and wheeled combat vehicles. Accompanied by well-researched, detailed line drawings, each section deals with a number of individual vehicles, describing their design, manufacture and specific use.
