**US Army Combat Engineer Vehicles** Jeffrey DeRosa,2021-11-28 The struggle for armored dominance sometimes overshadows the vital and unsung heroes of the battlefield: the engineers. Combat engineer vehicles spearhead armored attacks, breach obstacles, and prepare defenses. Born of necessity, these amazing vehicles have developed from humble beginnings to technological and mechanical marvels. After a slow and unimaginative start, the US Army has developed and fielded some of the most prolific and advanced combat engineer vehicles ever used. This book provides a rare look at these amazing machines and the crews that operated them. Vehicles covered are the M728 Combat Engineer Vehicle; Armored Vehicle Launched Bridge; M9 Armored Combat Earthmover; M9 ACE and M60 AVLB; M1132 Stryker Engineer Squad Vehicle; M2 Bradley, Wolverine, and Assault Breaching Vehicle; and Grizzly and Panther 2, as well as experimental and limited-use vehicles. Along with providing technical information, author Jeffrey DeRosa analyzes the operational effectiveness of each vehicle.

**Combat Engineering Equipment of the Warsaw Pact** Russell Phillips,2017-11-07 The ability to advance rapidly over sometimes difficult terrain was a key part of the Warsaw Pact's strategy. The Eastern European nations which formed this historic alliance wanted to be able to move quickly and effectively so they didn't give their enemies an advantage. The vital tools which helped the Warsaw Pact overcome the challenges it faced included a whole range of combat engineering equipment. This book is a factual reference of the equipment which was used throughout the Cold War period and the important roles each piece played. With obstacles including rivers and minefields to negotiate, combat units could have faced costly delays if it hadn't been for the diligent work of the Warsaw Pact's engineers. Refusing to allow troops to be slowed down by the landscape, these combat engineers worked in sometimes challenging conditions to find safe routes to their destination. From building bridges and clearing safe lanes through minefields to repairing and recovering broken down vehicles and creating field fortifications, the work of these engineers played an essential part in the Warsaw Pact's military strategy. But the work of this effective force would have been impossible without the specialist engineering equipment they used. Rugged, simplistic compared to their Western equivalents, these items would play a crucial part in both peacetime military exercises and combat operations in Afghanistan.

**Combat Vehicle Weight Reduction by Materials Substitution** National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,National Materials and Manufacturing Board,Defense Materials Manufacturing and Infrastructure Standing Committee,2018-11-12 Vehicle weight reduction is an effective strategy for reducing fuel consumption in civilian vehicles. For combat vehicles, it presents not only an important opportunity to reduce fuel use and associated logistics, but also important advantages in transport and mobility on the battlefield. Although there have been numerous efforts in the past to reduce the overall weight of combat vehicles, combat vehicle weight has continued to increase over time due to new threats and missions. On December 8 and 9, 2014, the National Academies of Sciences, Engineering, and Medicine held a workshop to explore opportunities in lightweight materials for armored vehicles. This was the ninth workshop in an ongoing series for the U.S. military on materials and manufacturing issues. The workshop discussed future advances in weight reduction by materials substitution for vehicles, including such topics as armor, structure, automotive parts, and armaments. This publication summarizes the presentations and discussions from the workshop.

**Chobham Armour** William Suttie,2022-10-27 A comprehensive overview of the work of the Military Vehicles Research and Development Establishment on Chobham Common, which provided armoured vehicles for the British Army from 1945 to its close in 2004. Through much of World War II British tanks and armoured vehicles were outmatched by the German tanks they encountered and this led to the British Army placing much emphasis on ensuring that the same situation would not arise again if the Cold War turned hot. The task of developing the Main Battle Tanks and supporting armoured vehicles to out-range and quickly destroy the Soviet threat fell to the scientists and engineers at the Fighting Vehicle Research and Development Establishment on Chobham Common near to Chertsey. It was the design authority for all British Military vehicles for most of the period. Military vehicle and equipment expert William Suttie draws extensively on official MOD reports to tell the story of the development of the British Cold War armour, such as the Centurion, Chieftain, Challenger, and many other wheeled and tracked armour vehicles that served the British Army of The Rhine. The vehicles developed at the Chertsey site were never used for their intended purpose on the plains of North-west Germany, but have proved their worth in British operations in places like Korea, Bosnia, Kuwait, Iraq and Afghanistan, as well as in the hands of other users around the world. Fully illustrated with photographs, schemes and drawings, including some that have never been published before, this is a unique detailed overview of the development of all post-war British armoured vehicles.

**Military Humvees** Michael Teitelbaum,Taylor Baldwin Kiland,2015-07-15 Armored, weaponized, and able to navigate different terrains, the Humvee has been used by the US military since the 1970s and continues to be a standard vehicle used in military operations. Soldiers in the field tell readers what it's like to operate Humvees in the field, and introduce them to the newest military vehicle, the MRAP (Mine Resistant Ambush Protected).

**US Combat Engineer 1941-45** Gordon L. Rottman,2012-06-20 At its peak in World War II, the United States Army contained over 700 engineer battalions, along with numerous independent brigades and regiments. The specialized soldiers of the Engineers were tasked with a wide variety of crucially important tasks including river bridging, camouflage, airfield construction, and water and petroleum supply. However, despite their important support roles, the engineers were often employed on the front lines fighting beside the general infantry in the desperate battles of the European theatre. This book covers the role of these soldiers, from their recruitment and training, through their various support missions and combat experiences, forming an account of what it was truly like to be a combat engineer in World War II.

**Stryker Combat Vehicles** Gordon L. Rottman,2012-09-20 The eight-wheeled (8x8) Stryker combat light armored vehicle was adopted by the US Army in 2002 to provide a comparatively rapidly deployable contingency force with armor protection, tactical mobility, and heavy firepower, as well as advanced command, control communications, computer, intelligence, surveillance, and reconnaissance (C4ISR) capabilities. Covering the first new US Army release since the M1 Abrams MBT, this book details the conception, ongoing development and deployment of one of the most highly anticipated new AFVs in recent years, including its service in Iraq and the ensuing controversy surrounding the Stryker's varying successes.
