**Implementing High-Quality Primary Care** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Implementing High-Quality Primary Care, 2021-06-30 High-quality primary care is the foundation of the health care system. It provides continuous, person-centered, relationship-based care that considers the needs and preferences of individuals, families, and communities. Without access to high-quality primary care, minor health problems can spiral into chronic disease, chronic disease management becomes difficult and uncoordinated, visits to emergency departments increase, preventive care lags, and health care spending soars to unsustainable levels. Unequal access to primary care remains a concern, and the COVID-19 pandemic amplified pervasive economic, mental health, and social health disparities that ubiquitous, high-quality primary care might have reduced. Primary care is the only health care component where an increased supply is associated with better population health and more equitable outcomes. For this reason, primary care is a common good, which makes the strength and quality of the country's primary care services a public concern. *Implementing High-Quality Primary Care: Rebuilding the Foundation of Health Care* puts forth an evidence-based plan with actionable objectives and recommendations for implementing high-quality primary care in the United States. The implementation plan of this report balances national needs for scalable solutions while allowing for adaptations to meet local needs.

*Care Work and Care Jobs for the Future of Decent Work* Laura Addati, International Labour Office, 2018 The report analyses the ways in which unpaid care work is recognised and organised, the extent and quality of care jobs and their impact on the well-being of individuals and society. A key focus of this report is the persistent gender inequalities in households and the labour market, which are inextricably linked with care work. These gender inequalities must be overcome to make care work decent and to ensure a future of decent work for both women and men. The report contains a wealth of original data drawn from over 90 countries and details transformative policy measures in five main areas: care, macroeconomics, labour, social protection and migration. It also presents projections on the potential for decent care job creation offered by remedying current care work deficits and meeting the related targets of the Sustainable Development Goals.

**Electro-Fenton Process** Minghua Zhou, Mehmet A. Oturan, Ignasi Sirés, 2017-11-25 This volume discusses the theoretical fundamentals and potential applications of the

original electro-Fenton (EF) process and its most innovative and promising versions, all of which are classified as electrochemical advanced oxidation processes. It consists of 15 chapters that review the latest advances and trends, material selection, reaction and reactor modeling and EF scale-up. It particularly focuses on the applications of EF process in the treatment of toxic and persistent organic pollutants in water and soil, showing highly efficient removal for both lab-scale and pre-pilot setups. Indeed, the EF technology is now mature enough to be brought to market, and this collection of contributions from leading experts in the field constitutes a timely milestone for scientists and engineers.

The Labor Market for Health Workers in Africa Agnes Soucat, Richard Scheffler, Tedros Ghebreyesus, 2013-04-26 Sub-Saharan Africa has only 12 percent of the global population, yet this region accounts for 50 percent of child deaths, more than 60 percent of maternal deaths, 85 percent of malaria cases, and close to 67 percent of people living with HIV. Sub-Saharan Africa, however, has the lowest number of health workers in the world-significantly fewer than in South Asia, which is at a comparable level of economic development. The Labor Market for Health Workers in Africa uses the analytical tools of labor markets to examine the human resource crisis in health from an economic perspective. Africa's labor markets are complex, with resources coming from governments, donors, the private sector, and households. Low numbers of health workers and poor understanding of labor market dynamics are major impediments to improving health service delivery. Yet some countries in the region have developed innovative solutions with new approaches to creating a robust health workforce that can respond to the continent's health challenges. As Africa grows economically, the invaluable lessons in this book can help build tomorrow's African health systems.
