Dale Sinclair

Construction Project Teams T. C. Cornick, 1999 This book addresses the important issues involved in forming effective and profitable teams for construction projects – both within and between client, design and construction firms. It is divided into two main sections. The first contains theories related to particular aspects of project teams, with key points illustrating their practical application. The second contains real and simulated building and civil engineering case studies, each concluding with corrective lessons to aid successful construction project team building.

The Romance of Construction – I ,

Lean Culture for the Construction Industry Gary Santorella, 2010-12-08 Given that the greatest risk factor on any project is manpower costs, problems resulting in delays, rework, or overtime will lower profits through increased labor costs. Most of these process-generated costs are fully preventable. An in-depth exploration of the application of Lean initiatives in the construction industry, *Lean Culture for the Const*

Assembling a Collaborative Project Team Dale Sinclair, 2019-07-25 Contemporary construction practice presents a shift in emphasis from thinking about the design team in isolation, to considering the project team as a collaborative whole: client, design team, and contractor. This approach requires greater consideration of how the project team is procured and assembled – and *Assembling a Collaborative Project Team* provides a range of in-depth and invaluable methods for ensuring that this essential task is carried out effectively. It will bring a range of benefits to any project – from facilitating BIM-ready teams, to better construction programming, and reducing risk through ensuring a watertight contractual framework. Many of the methods presented here are likely to become ingrained in the way all projects are coordinated. It shows that the best way of assembling a collaborative team is by establishing the team at the outset in manner that ensures that each party is fully aware of what they need to do and when, and by agreeing how this will be achieved.

Briefing the Team Construction Industry Board (Great Britain). Working Group 1, 1997 Designed to help potential clients work out whether or not they need a construction project, and if construction is the option chosen, to improve the briefing they give so that the project team fully understands their needs and they secure the product and outcome they require --p.5.

Trusting the Team John Bennett, Sarah Jayes, 1995 This report discusses the benefits and costs of partnering and deals with the specifics of the two main types of partnering – project partnering and strategic partnering. It provides practical advice and guidance on how you can apply partnering to your organisation and details the contractual and legal issues.

Implementing Virtual Design and Construction using BIM Lennart Andersson, Kyla Farrell, Oleg Moshkovich, Cheryle Cranbourne, 2016-04-14 *Implementing Virtual Design and Construction using BIM* outlines the team structure, software and production ecosystem needed for an effective Virtual Design and Construction (VDC) process through current real world case studies of projects both in development and under construction. It provides the reader with a better understanding of the successful implementation of VDC and Building Information Modeling (BIM), and the benefits to the project team throughout the design and construction process. For readers already familiar with VDC, the book will provide invaluable examples of best practices and real world solutions. Richly illustrated in color with actual VDC documentation, visualizations, and statistics, the reader is shown the real processes undertaken and outputs generated when working on high profile building information models. Online animations, interviews with practitioners, and downloadable templates, forms and files make this an interactive and highly engaging way to learn a crucial set of skills. While keeping up with current industry practice is a minimum requirement, this book goes further by helping you prepare for the next level of virtual design and

construction. This is essential reading for project managers, construction managers, architects, design managers, and anybody with a role in BIM or virtual construction.

A sleeker, more comprehensive approach to construction projects BIM and Construction Management, Second Edition is a complete integration guide, featuring practical advice, project tested methods and workflows, and tutorials for implementing Building Information Modeling and technology in construction. Updated to align with the latest software editions from Autodesk, Trimble and Bentley, this book provides a common sense approach to leveraging BIM to provide significant value throughout a project's life cycle. This book outlines a results-focused approach which shows you how to incorporate BIM and other technologies into all phases of construction management, such as: Project planning: Set up the BIM project to succeed right from the start by using the right contracts, the right processes and the right technology Marketing: How to exceed customer expectations and market your brand of BIM to win. Pre-construction: Take a practical approach to engineer out risks in your project by using the model early to virtually build and analyze your project, prior to physical construction. Construction: Leverage the model throughout construction to build safer and with better quality. Field work: Learn how mobile technologies have disrupted the way we work in the field to optimize efficiencies and access information faster. Closeout: Deliver a better product to your customer that goes beyond the physical structure and better prepares them for future operations. Additionally, the book provides a look at technology trends in construction and a thoughtful perspective into potential use cases going forward. BIM and Construction Management, Second Edition builds on what has changed in the construction landscape and highlights a new way of delivering BIM-enabled projects. Aligning to industry trends such as Lean, integrated delivery methods, mobile platforms and cloud-based collaboration this book illustrates how using BIM and technology efficiently can create value.

Managing Change in Construction Projects Sepani Senaratne, Martin Sexton, 2011-01-31
Managing Change in Construction Projects: a knowledge-based approach offers a new perspective on construction project change by viewing the process of change management as a knowledge-intensive activity, where team members bring their tacit and explicit knowledge into the situation; share, create and capture this collective knowledge for future re-use in similar situations. Through this knowledge-based approach, construction teams can successfully resolve and learn from change events, leading to an overall

improved performance of the industry. The book will make a significant contribution to our understanding of construction project change by offering new theoretical and practical insights and models grounded in results of case studies conducted within two collaborative construction project team settings. By demonstrating how the social construction of knowledge works in construction settings, the authors challenge the prevailing change management solutions based on 'hard' IT approaches. They put forward a balanced view that incorporates both IT-based and socially constructed approaches to effective management of construction project change. helps construction managers to improve and learn through the process of construction project change presents new theoretical models and offers practical guidelines first research-based book to directly address project change from a knowledge-based perspective draws on detailed studies with construction companies, including Ballast Construction and Kier Construction encourages a move from the information driven, process integrated approach to a knowledge-based view

Construction Project Management Peter Fewings, Christian

Henjeweale, 2019-03-21 Construction Project Management: An Integrated Approach is a management approach to leading projects and the effective choice and use of project management tools and techniques. It seeks to push the boundaries of project management to take on board future needs and user issues. Integration of the construction project, meaning closer relations between the project team, the supply chain and the client, is long overdue; however, despite some signs of growth in this area, the industry nonetheless remains fragmented in its approach. The role of the project manager is to integrate diverse interests and unify objectives to achieve a common goal. This has now broadened to include a responsibility, on the parts of both client and team, to ensure that construction addresses current and future societal needs. From an economic perspective, a great deal of waste is connected with conflict, thus a holistic approach that increases the efficiency and effectiveness of the task at hand will inject energy into project management. This third edition now takes on board the impact of technology in building information modelling and other digitised technologies such as artificial intelligence. Together, they open up avenues for more direct and incisive action to test creative design, manufacture directly and communicate spontaneously and intuitively. In time, such technologies will change the role of project managers but will never take away their responsibility to be passionate about construction and to integrate the team. A new chapter has been added that considers future societal needs. This edition is also reordered to make the project life cycle and process chapters clearer. This book combines best practice in construction with the theories underpinning project management and presents a wealth of practical case studies - many new. It focuses on all construction disciplines that may manage projects. The book is of unique value to students in the later years of undergraduate courses and those on specialist postgraduate courses in project management and also for practitioners in all disciplines and clients who have experienced the frustration caused by the fragmentation of construction projects.

Tomorrow's Team Construction Industry Board (Great Britain). Working Group 8, 1996 Focuses on equal opportunities for women within the industry. This report encourages the development of attitudes, practices and physical environments within the industry that neither directly nor indirectly have the effect of placing women at a disadvantage. It also shows that the most challenging task is to change attitudes and culture.

Constructing a Better Image Construction Industry Board (Great Britain). Working Group 7, Construction Industry Board. Working Group 7, 1996 The construction industry has a lot of good news to tell. Through implementing Sir Michael Latham's recommendations, it is positively addressing many of its perceived failings. The proposals in this report are designed to enable the Construction Industry Board to get this message across, both within the industry and outside, among its clients and the general public. They include the launch of a nationwide Considerate Constructors Scheme by the end of 1996, a National Construction Week from 1997, and a public relations campaign co-ordinated by the CIB once its publications and other output begin to appear from summer 1996 onwards.

Collaborative Construction Information Management Geoffrey Shen, Peter Brandon, Andrew Baldwin, 2009-06-02 Most construction projects are large and costly. Collaborative working involves two or more stakeholders sharing their efforts and resources to complete the project more effectively and efficiently. Collaborative, integrative and multi-disciplinary teams can tackle the complex issues involved in creating a viable built environment. This tends to be looked at from three interrelated perspectives: the technological, organizational, and social; and of these the key issue is to improve productivity and enable innovation through the empowerment and motivation of people. This book provides insights for researchers and practitioners in the building and construction industry as well as graduate students, written by an international group of leading scholars and professionals into the potential use, development and limitations of current collaborative technologies and practices. Material is grouped into the themes of advanced technologies for collaborative working, virtual prototyping in design and construction, building information modelling, managing the collaborative processes, and human issues in collaborative working.

The result is an extraordinary guide to integrating practice across disciplines.” —Bob Fisher, Editor-In-Chief, Design Intelligence “Managing Design peers into the soul of a contentious industry as it grapples with change—a deep dive into the design and construction process in the words of those doing the work. I enjoyed the engineers and contractors’ pleas to be made parties to design process early on. The questions—as interesting as the answers—are both here in this book.” —Richard Korman, Deputy Editor, Engineering News Record “Managing Design hits many of the design and construction industry’s ills head-on with insightful interviews by new and established leaders and real-world tactics on creating better teams, better communications between players, and—most vitally—better project results.” —Rebecca W. E. Edmunds, AIA, Editor, Author and President, r4 llc

Better Construction Briefing Peter Barrett, Catherine A. Stanley, 1999-09-08 Very few buildings finish on time or at the right price, and clients often criticise the fact that the finished building is not what they expected. Poor communication between the parties at one or more stages of the construction process seems to be the cause, and improved briefing practice has long been recognised as one important area where such communication could be improved. This book examines the briefing process to understand its strengths and weaknesses and the problems involved, draws on the experience of other disciplines and industries, and identifies best practice and purpose innovations in the briefing process. It is strongly industry oriented while drawing on sound research.
