John Hands

Entangled Life Merlin Sheldrake, 2021-04-13 NEW YORK TIMES BESTSELLER • A “brilliant [and] entrancing” (The Guardian) journey into the hidden lives of fungi—the great connectors of the living world—and their astonishing and intimate roles in human life, with the power to heal our bodies, expand our minds, and help us address our most urgent environmental problems. “Grand and dizzying in how thoroughly it recalibrates our understanding of the natural world.”—Ed Yong, author of *An Immense World* ONE OF THE BEST BOOKS OF THE YEAR—Time, BBC Science Focus, The Daily Mail, Geographical, The Times, The Telegraph, New Statesman, London Evening Standard, Science Friday When we think of fungi, we likely think of mushrooms. But mushrooms are only fruiting bodies, analogous to apples on a tree. Most fungi live out of sight, yet make up a massively diverse kingdom of organisms that supports and sustains nearly all living systems. Fungi provide a key to understanding the planet on which we live, and the ways we think, feel, and behave. In the first edition of this mind-bending book, Sheldrake introduced us to this mysterious but massively diverse kingdom of life. This exquisitely designed volume, abridged from the original, features more than one hundred full-color images that bring the spectacular variety, strangeness, and beauty of fungi to life as never before. Fungi throw our concepts of individuality and even intelligence into question. They are metabolic masters, earth makers, and key players in most of life’s processes. They can change our minds, heal our bodies, and even help us remediate environmental disaster. By examining fungi on their own terms, Sheldrake reveals how these extraordinary organisms—and our relationships with them—are changing our understanding of how life works. Winner of the Wainwright Prize, the Royal Society Science

Book Prize, and the Guild of Food Writers Award • Shortlisted for the British Book Award • Longlisted for the Rathbones Folio Prize

Rag Cosmology Erin Robinsong, 2017 In this time of ecological precarity, Rag Cosmology is an urgent invitation to reinvent our modes of engagement with the environment we not only inhabit, but are. Refusing the lamentation that leaves us as resigned witnesses to devastation, Rag Cosmology counters fatalist narratives with the pleasures of ecological entanglement and engagement. Tracing relationships between seemingly irreconcilable things—economy and ecology, weather and lust, bills and inner voices, wages of avoidance and wages of listening—Rag Cosmology offers the intimate and lush language of thought that yearns for an imaginative reinvention of how we understand what we are part of and what we are losing.--

140 Artists' Ideas for Planet Earth Hans Ulrich Obrist, Kostas Stasinopoulos, 2021-06-03 Through 140 drawings, thought experiments, recipes, activist instructions, gardening ideas, insurgences and personal revolutions, artists who spend their lives thinking outside the box guide you to a new worldview; where you and the planet are one. Everything here is new. We invite you to rip out pages, to hang them up at home, to draw and scribble, to cook, to meditate, to take the book to your nearest green space. Featuring Olafur Eliasson, Etel Adnan, Alexis Pauline Gumbs, Jane Fonda & Swoon, Judy Chicago, Black Quantum Futurism Collective, Vivienne Westwood, Cauleen Smith, Marina Abramovic, Karrabing Film Collective, and many more.

The Sense of Being Stared At Rupert Sheldrake, 2013-06-22 Explores Rupert Sheldrake's more than 25 years of research into telepathy, staring and intention, precognition, and animal premonitions • Shows

that unexplained human abilities--such as the sense of being stared at and phone telepathy--are not paranormal but normal, part of our biological nature • Draws on more than 5,000 case histories, 4,000 questionnaire responses, and the results of experiments carried out with more than 20,000 people • Reveals that our minds and intentions extend beyond our brains into the world around us and even into the future Nearly everyone has experienced the feeling of being watched or had their stare result in a glance in their direction. The phenomenon has been cited throughout history in nearly every culture, along with other commonplace “paranormal” occurrences such as premonitions and telepathy. In this newly updated edition, Sheldrake shares his more than 25 years of research into telepathy, the power of staring, remote viewing, precognition, and animal premonitions. Drawing on more than 5,000 case histories, 4,000 questionnaire responses, and the results of experiments on staring, thought transference, phone telepathy, and other phenomena carried out with more than 20,000 people as well as reports and data from dozens of independent research teams, Sheldrake shows that these unexplained human abilities--such as the sense of being stared at--are not paranormal but normal, part of our biological nature. He reveals that telepathy depends on social bonds and traces its evolution from the connections between members of animal groups such as flocks, schools, and packs. Sheldrake shows that our minds and intentions extend beyond our brains into our surroundings with invisible connections that link us to each other, to the world around us, and even to the future.

The Pelican Chorus Edward Lear, 2017-10-24 With lavish illustrations, Caldecott Honoree Marcellino brings a decidedly droll vision to three of Lear's classic tales--The New Vestments, The Pelican Chorus, and The Owl and the

Pussycat--in this picture book collection. Full color. 11 x 9 1/2.

Dogs That Know When Their Owners Are Coming Home Rupert Sheldrake, 2011-04-26 With a scientist's mind and an animal lover's compassion, world-renowned biologist Rupert Sheldrake presents a groundbreaking exploration of animal behavior that will profoundly change the way we think about animals--and ourselves. How do cats know when it's time to go to the vet, even before the cat carrier comes out? How do dogs know when their owners are returning home at unexpected times? How can horses find their way back to the stable over completely unfamiliar terrain? After five years of extensive research involving thousands of people who have pets and work with animals, Dr. Sheldrake proves conclusively what many pet owners already know: there is a strong connection between humans and animals that defies present-day scientific understanding. Sheldrake compellingly demonstrates that we and our pets are social animals linked together by invisible bonds connecting animals to each other, to their owners, and to their homes in powerful ways. His provocative ideas about these social, or morphic, fields explain the uncanny behavior often observed in pets and help provide an explanation for amazing animal behavior in the wild, such as migration and homing. *Dogs That Know When Their Owners Are Coming Home* not only provides fascinating insight into animal, and human, behavior, but also teaches us to question the boundaries of conventional scientific thought, and shows that the very animals who are closest to us have much to teach us about biology, nature, and consciousness.

Cosmosapiens John Hands, 2017-10-31 "A critical overview of scientific orthodoxy in an attempt to answer the fundamental questions "what are we?" and "why are we

here?" (Kirkus Reviews). Specialist scientific fields are developing at incredibly swift speeds, but what can they really tell us about how the universe began and how we as humans evolved to play such a dominant role on Earth? John Hands's extraordinarily ambitious book merges scientific knowledge from multiple disciplines and evaluates without bias or preconception all the theories and evidence about the origin and evolution of matter, consciousness, and mankind. The result, a "pearl of dialectical reasoning" (Publishers Weekly, starred review), provides the most comprehensive account yet of current ideas such as cosmic inflation, dark energy, the selfish gene, and neurogenetic determinism. In the clearest possible prose, it differentiates the firmly established from the speculative and examines the claims of various fields to approach a unified theory of everything. In doing so it challenges the orthodox consensus in those branches of cosmology, biology, and neuroscience that have ossified into dogma. Its "shocking and invigorating" analysis (Daily Telegraph, A Best Science Book of 2015) reveals underlying patterns of cooperation, complexification, and convergence that lead to the unique emergence in humans of a self-reflective consciousness that enables us to determine our future evolution. This groundbreaking book is destined to become a classic of scientific thinking. Praise for *Cosmosapiens* "This is a truly exceptional piece of work." —Tim Crane, Knightsbridge Professor of Philosophy, The University of Cambridge "A game-changer. In the tradition of Thomas Kuhn's *The Structure of Scientific Revolutions*, this lucidly written, penetrating analysis challenges us to rethink many things we take for granted about ourselves, our society, and our universe. It will become a classic." —Peter Dreier, E P Clapp Distinguished Professor of Politics, Occidental College "Hands is an astute observer of recent trends in scientific

ideas bold enough to point out what he sees as sense and nonsense and intelligently explain why. Even in cases where one might disagree, the arguments are thought-provoking.” —Paul Steinhardt, Albert Einstein Professor in Science, Princeton University

The Forest and the EcoGothic Elizabeth

Parker, 2020-02-13 This book offers the first full length study on the pervasive archetype of The Gothic Forest in Western culture. The idea of the forest as deep, dark, and dangerous has an extensive history and continues to resonate throughout contemporary popular culture. The Forest and the EcoGothic examines both why we fear the forest and how exactly these fears manifest in our stories. It draws on and furthers the nascent field of the ecoGothic, which seeks to explore the intersections between ecocriticism and Gothic studies. In the age of the Anthropocene, this work importantly interrogates our relationship to and understandings of the more-than-human world. This work introduces the trope of the Gothic forest, as well as important critical contexts for its discussion, and examines the three main ways in which this trope manifests: as a living, animated threat; as a traditional habitat for monsters; and as a dangerous site for human settlement. This book will appeal to students and scholars with interests in horror and the Gothic, ecohorror and the ecoGothic, environmentalism, ecocriticism, and popular culture more broadly. The accessibility of the subject of ‘The Deep Dark Woods’, coupled with increasingly mainstream interests in interactions between humanity and nature, means this work will also be of keen interest to the general public.

The Beanfield Breach Theatre, 2016-03-18 One of the hits of Edinburgh 2015, The Beanfield is the boldy political first show from Warwick University graduates Breach Theatre. 2015 marks the 30th anniversary of the Battle of

the Beanfield – a brutal police crackdown on the annual Stonehenge Free Festival. Called away from policing the miners' strike to uphold a new injunction around the Stones, officers took the tactics of Orgreave to a field in Wiltshire – battering and injuring new age travellers, making mass-arrests and destroying their mobile homes. Performance makers Breach, and Guardian award-winning video artist Dorothy Allen-Pickard present a multimedia show set between the 1985 and 2015 summer solstice celebrations, reflecting on state violence, civic freedom and cultural heritage.

The Promise of the University Áine

Mahon, 2022-01-09 This book offers philosophical readings of the contemporary university and is motivated by a series of pressing challenges in the global context of Higher Education. It argues that the university is a place for community, for refuge, for enlightenment and the careful questioning of knowledge, but it is also a place for visceral ambition and for intellectual cowardice, for blinkered individualism and professional competitiveness. In the context of a highly competitive post-crash global economy, contemporary students are placed under increasing pressure to distinguish themselves from their peers via a portfolio of learning excellence and extracurricular achievement. Growing numbers undertake part or full-time employment in order to cover registration fees and the basic costs of living. University staff take on very different forms of pressure that operate across the life-course of an academic career – from early-career anxieties to the worries of more privileged and permanent faculty who fear they do not meet ever-changing structures, assumptions and demands of the university itself. This book argues that these interlinked agendas demand consideration from philosophers of education in Ireland, Europe and further

afield. It proposes that we must embody a very careful balancing act: one where we remember the romantic ideals and promises of the university while still acknowledging the very real and pressing challenges faced by our staff and students. The book will be of interest to academics, graduate students, and advanced-level undergraduates in Philosophy, Education, Mental Health, and Organizational Psychology in both North America and Europe.

Patch & Tweak with Moog Kim Bjørn, 2020 Patch & Tweak with Moog is the ultimate resource for Moog synthesizer enthusiasts and musicians of all skill levels interested in an immersive modular synthesis experience. Opening with a foreword from acclaimed film score composer Hans Zimmer, this hardcover book by Kim Bjørn features 200 pages full of synthesizer techniques, creative patch ideas, sound design tips, professional artist interviews, in-depth discussions with Moog engineers, and a glimpse into the company's remarkable history. The book's primary focus is Moog's well-loved line of semi-modular analog synthesizers: Mother-32, DFAM, Subharmonicon, Grandmother, and Matriarch. Patch & Tweak with Moog brings readers inside the creative minds of composers, producers, and performing artists like Suzanne Ciani, Trent Reznor, Lisa Bella Donna, Paris Strother, Hannes Bieger, Stranger Things composers Michael Stein and Kyle Dixon, and Moog synthesizer co-inventor Herb Deutsch in detailed interviews featuring patching tips and tricks for musicians of all skill levels.

The Science Delusion Rupert Sheldrake, 2020-06-25 Freeing the Spirit of Enquiry The Science Delusion is the belief that science already understands the nature of reality. The fundamental questions are answered, leaving only the details to be filled in. In this book (published in the US as *Science Set Free*), Dr Rupert Sheldrake, one of the

world's most innovative scientists, shows that science is being constricted by assumptions that have hardened into dogmas. The 'scientific worldview' has become a belief system. All reality is material or physical. The world is a machine, made up of dead matter. Nature is purposeless. Consciousness is nothing but the physical activity of the brain. Free will is an illusion. God exists only as an idea in human minds, imprisoned within our skulls. Sheldrake examines these dogmas scientifically, and shows persuasively that science would be better off without them: freer, more interesting, and more fun. In *The God Delusion* Richard Dawkins used science to bash God, but here Rupert Sheldrake shows that Dawkins' understanding of what science can do is old-fashioned and itself a delusion.

A New Science of Life Rupert Sheldrake, 2005-02-01

******The fully revised edition of Rupert Sheldrake's controversial science classic, from the author of the bestselling *Dogs That Know When Their Owners are Coming Home*, celebrates its 40th anniversary in 2021!****** After chemists crystallised a new chemical for the first time, it became easier and easier to crystallise in laboratories all over the world. After rats at Harvard first escaped from a new kind of water maze, successive generations learned quicker and quicker. Then rats in Melbourne, Australia learned yet faster. Rats with no trained ancestors shared in this improvement. Rupert Sheldrake sees these processes as examples of morphic resonance. Past forms and activities of organisms, he argues, influence organisms in the present through direct connections across time and space. Individual plants and animals both draw upon and contribute to the collective memory of their species. Sheldrake, now Director of the Perrott-Warwick Project supported by Trinity College, Cambridge, reinterprets the regularities of nature as being more like habits than

immutable laws. Described as 'the best candidate for burning there has been for many years' by Nature on first publication, this updated edition will raise hackles and inspire curiosity in equal measure.

The Human Cosmos Jo Marchant, 2021-09-07 A Best Book of 2020 (NPR) A Best Book of 2020 (The Economist) A Top Ten Best Science Book of 2020 (Smithsonian) A Best Science and Technology Book of 2020 (Library Journal) A Must-Read Book to Escape the Chaos of 2020 (Newsweek) Starred review (Booklist) Starred review (Publishers Weekly) A historically unprecedented disconnect between humanity and the heavens has opened. Jo Marchant's book can begin to heal it. For at least 20,000 years, we have led not just an earthly existence but a cosmic one. Celestial cycles drove every aspect of our daily lives. Our innate relationship with the stars shaped who we are—our art, religious beliefs, social status, scientific advances, and even our biology. But over the last few centuries we have separated ourselves from the universe that surrounds us. It's a disconnect with a dire cost. Our relationship to the stars and planets has moved from one of awe, wonder and superstition to one where technology is king—the cosmos is now explored through data on our screens, not by the naked eye observing the natural world. Indeed, in most countries, modern light pollution obscures much of the night sky from view. Jo Marchant's spellbinding parade of the ways different cultures celebrated the majesty and mysteries of the night sky is a journey to the most awe-inspiring view you can ever see: looking up on a clear dark night. That experience and the thoughts it has engendered have radically shaped human civilization across millennia. The cosmos is the source of our greatest creativity in art, in science, in life. To show us how, Jo Marchant takes us to the Hall of the Bulls in the caves at Lascaux in France, and to

the summer solstice at a 5,000-year-old tomb at Newgrange, Ireland. We discover Chumash cosmology and visit medieval monks grappling with the nature of time and Tahitian sailors navigating by the stars. We discover how light reveals the chemical composition of the sun, and we are with Einstein as he works out that space and time are one and the same. A four-billion-year-old meteor inspires a search for extraterrestrial life. The cosmically liberating, summary revelation is that star-gazing made us human.

Science Set Free Rupert Sheldrake, 2013-09-03 The bestselling author of *Dogs That Know When Their Owners Are Coming Home* offers an intriguing new assessment of modern day science that will radically change the way we view what is possible. In *Science Set Free* (originally published to acclaim in the UK as *The Science Delusion*), Dr. Rupert Sheldrake, one of the world's most innovative scientists, shows the ways in which science is being constricted by assumptions that have, over the years, hardened into dogmas. Such dogmas are not only limiting, but dangerous for the future of humanity. According to these principles, all of reality is material or physical; the world is a machine, made up of inanimate matter; nature is purposeless; consciousness is nothing but the physical activity of the brain; free will is an illusion; God exists only as an idea in human minds, imprisoned within our skulls. But should science be a belief-system, or a method of enquiry? Sheldrake shows that the materialist ideology is moribund; under its sway, increasingly expensive research is reaping diminishing returns while societies around the world are paying the price. In the skeptical spirit of true science, Sheldrake turns the ten fundamental dogmas of materialism into exciting questions, and shows how all of them open up startling new possibilities for discovery. *Science Set Free* will radically change your view of what is

real and what is possible.

Francis Huxley and the Human Condition Ron Roberts, Theodor Itten, 2020-10-08 Focused on the life and work of Francis Huxley (1923-2016), this book offers an exploration of the search to understand the human condition, one which is simultaneously biographical, philosophical, cultural, historical, political and epistemological. A member of the illustrious Huxley dynasty, Francis Huxley forged an unusual and innovative career, making key contributions to social anthropology, mental health care and the protection of indigenous peoples. His story reveals how the production and dissemination of ideas can be understood in an intergenerational context which is familial and sociological. The book reflects on the contemporary relevance of Huxley's work, forging links between the central philosophical, cultural, scientific and political themes that dominate the turbulent early 21st century and the enduring questions that have driven human beings in the search to understand themselves and their place in the world. It will be of interest to scholars from across the social sciences and humanities.

Behind Open Doors INGRID MACLEAN, 2019-01-20 Nigel Lesmoir-Gordon, the Acid Messiah of 101 Cromwell Road: His life and times. 101 has become legendary over the decades, being regarded as the hub of Swinging London, where the Beautiful People went to turn on and tune in. But NOT drop out! With a cast of thousands, including Beatles, Stones, aristocrats and secret agents, this colourful account of a brief moment that changed the world will entertain and enthral. Not only do we learn who took the acid, we also discover how - and why - it came to London in the first place. Conspiracy and control, liberation and love. All human life is here!

A Book of Noises Caspar Henderson, 2023-11-03 A Little Book of Noises gathers together sounds from the cosmos, the natural world, the human world, and the invented world, as well as containing pockets of silence. From the vast sound of sand in the desert to the tuneful warble of a songbird, from the meditative resonance of a temple bell to the improvisational melodies of jazz, this is a celebration of all things auraculous, or ear marvelous. Sound shapes our world in invisible but significant ways, and writer Caspar Henderson brings his characteristic curiosity and knowledge to the subject to take us on an exhilarating journey to examine noise related to humans (anthropophony), other life (biophony), our planet (geophony), and space (cosmophony)--

Teaching the Literature of Climate Change Debra J. Rosenthal, 2024-04-26 Over the past several decades, writers such as Margaret Atwood, Paolo Bacigalupi, Octavia E. Butler, and Kathy Jetñil-Kijiner have explored climate change through literature, reflecting current anxieties about humans' impact on the planet. Emphasizing the importance of interdisciplinarity, this volume embraces literature as a means to cultivate students' understanding of the ongoing climate crisis, ethics in times of disaster, and the intrinsic intersectionality of environmental issues. Contributors discuss speculative climate futures, the Anthropocene, postcolonialism, climate anxiety, and the usefulness of storytelling in engaging with catastrophe. The essays offer approaches to teaching interdisciplinary and cross-listed courses, including strategies for team-teaching across disciplines and for building connections between humanities majors and STEM majors. The volume concludes with essays that explore ways to address grief and to contemplate a hopeful future in the face of apocalyptic predictions.

Who Cares Wins Lily Cole, 2020-08-11 A rousing call to

action, this book will leave you feeling hopeful that we can make a difference in the midst of an age of turmoil, destruction, and uncertainty. The climate crisis, mass extinctions, political polarization, extreme inequality--the world faces terrifying challenges that threaten to divide us, yet Lily Cole argues that it is up to us to actively choose optimism, collaborate, make changes, and define what is possible. Cole writes: We are the ancestors of our future. The choices we make now and the actions we take today will define and transform future generations. Having collaborated with experts working on solutions to humanity's biggest challenges, Cole distills a vision for a sustainable and peaceful future. She explores divisive issues from fast fashion to fast food and from renewable energy to gender equality, and interviews some of today's greatest influencers: Sir Paul McCartney (musician and activist), Elon Musk (CEO of SpaceX), Gail Bradbrook (cofounder of Extinction Rebellion), Farhana Yamin (climate change lawyer and activist), Emily Shuckburgh (climate scientist), Stella McCartney (sustainable fashion designer), Livia Firth (cofounder of Eco-Age), and Lisa Jackson (vice president of environment, policy and social initiatives at Apple, former Administrator of the EPA). The book also features a 32-page photo insert documenting Lily's experiences around the world, as well as the artists, activists, and others who have inspired her, and her own--as yet unpublished--photography.

Adopting the Beat of Term: An Emotional Symphony within **Cosmo Sheldrake**

In a global used by screens and the ceaseless chatter of quick interaction, the melodic elegance and mental
