Investigation of Failure of Crane Rope from Dsv Dsnd Pelican Health and Safety Executive Staff, Isabel M. L. Ridge, C. Richard Chaplin, J. E. Bradon, Great Britain. Health and Safety Executive, University of Reading. Department of Engineering, 2002-06-25 This report describes the inspection of a 34LR whipline rope on the DSV PELICAN which failed in service on 17 March 2001 whilst deploying a subsea module. The whipline was rated at 10 tonnes. The weight of the module (weight in air 3.5 tonnes) was such that even allowing for dynamic loading and the effect of added mass, the integrity of the rope must have been severely impaired for failure to occur.

Compliant Offshore Structures Minoo H Patel, Joel A Witz, 2013-10-22 Compliant Offshore Structures deals with some aspects of the mechanics of compliant offshore structures. Analysis methods for determining the hydrostatic and hydrodynamic behavior, at wave frequencies only, of conventional and novel compliant structure types are described. The contribution of hull configuration for tandem hull vessels and of pneumatic compliances for ship shape and semi-submersible vessels is also emphasized. Comprised of 11 chapters, this book begins with an overview of the various conventional and emerging methods of hydrostatic and hydrodynamic analysis that are available for characterizing compliant marine structures. The response of compliant structures to ocean waves is given emphasis, along with the hydrostatic stability of a compliant vessel. The discussion then turns to the use of analysis methods for a variety of conventional and novel compliant structures such as semi-submersibles, ship forms, tensioned buoyant platforms, crane vessels, and vertical marine risers. However, those compliant structures that are believed to have a future application or, alternatively, are useful in illustrating an interesting performance feature are also considered. Among such structures are those with articulated joints, pneumatic compliances, and tandem hull marine vehicles. This monograph is intended for practicing engineers as well as undergraduate and postgraduate students.

Ships and Offshore Structures XIX Carlos Guedes Soares, Y. Seaside Operations Planning in Container Terminals Frank Meisel, 2009-05-28 1. 1 Motivation and Scope of Research Container terminals in seaports constitute interfaces between sea and land tra- port of goods in global transport chains. These logistics facilities face an increasing demandof service capacity, as is re ected by a tremendousgrowthin the worldwide container transshipments per year. For example, the top 20 terminals in the world showed an average relative increase of 14% with respect to the number of handled container units from 2006 to 2007, see Port of Hamburg Marketing (2008). In spite of this development, competition is high among container terminals within the same region. A terminal's customers, rst and foremost the vessel op- ators, expect a high level of service quality where reliability is one of the most important dimensions, see Wiegmansetal. (2001). Regarding theservice of aversel, reliability means to realize all transshipment operations within its projected service time interval. The reliability of terminal operations impacts the reliability of v- sels in meeting their liner schedules. According to Notteboom (2006) unexpected waiting times of vessels before berthing and unexpected low transshipment proditivity at terminals are responsible for about 86% of liner schedule disturbances, see Fig. 1. 1. Currently, many terminal operators counteract this situation by extending their transshipment capacities. They build new terminals or enlarge existing ter- nals and purchase new or upgrade existing equipment. Ilmer (2005) provides an overview of current projects for building terminal capacity in northern Europe.

Motion Responses for Selected Cargo Location Points on a T-ACS 4 Auxiliary Crane Ship in an Open Seaway Kelly Cooper, Naval Surface Warfare Center (U.S.). Carderock Division, 1996-09-01 This report presents predictions of ship motion responses due to the presence of waves for the T-ACS 4 Auxiliary Crane Ship, which is representative of a typical military container ship. It discusses an analytical procedure for considering a combination of sea and swell conditions. This report specifically addresses the motion responses of particular points on the ship which correspond to cargo locations. From these motion response predictions, this report develops a three-dimensional motion envelope for multiple wave headings.

Offshore Platform Integration and Floatover Technology Gengshen Liu, Huajun Li, 2017-05-31 This book discusses offshore platform integration technology, focusing on the floatover methodology and its applications. It also addresses topics related to safety and cost-effectiveness, as well as ensuring the success of a project through careful planning and established detailed operation procedure/working manuals, which are rarely found in the published literature. Unlike other publications in this area, the book not only includes details of technology development, but also presents real project cases in the discussion to make it more comprehensible. Each topic is illustrated with carefully created sketches to show the complex operation procedures.

Dynamic Positioning Dr Surender Kumar,2020-11-26 It is important for every DP professional to understand the system well that they are going operate or maintain. Keeping this in view, this book starts with an introduction to the functioning of DP system. Chapter two makes the reader aware of the six degrees of the movements. The understanding of the movements controlled by the DP system and the movements compensated for offsetting the readings of the position reference sensors is explained. Chapter three deals with the seven components of the DP system, how they connect with each other and how the controller controls the thruster output with the help of thruster allocation logic. Asking questions make the learning process more interactive. The book includes the questions and their answers which address various aspects of Bloom's taxonomy of understanding, applying and evaluating the subject. Chapter four to chapter fifteen contain the questions and answers. These chapters include questions and answers from basic functioning of the DP system, the sensor, position reference sensor, test on PRS, automation and networking used in DP system, various tests and trials conducted and importantly the operations related questions.
