**Crawlers** John Shirley,2007-12-18 In a secret government lab somewhere in Nevada, a young scientist cowers in darkness—waiting, listening, and calculating his chances of surviving the unspeakable carnage that has left him trapped and alone. Or almost alone. Soon after, a covert military operation “cleanses” all traces of a top-secret project gone horrifically wrong. Three years later, it begins again—when the quiet of a warm autumn night in a sleepy California town is shattered by a streak of light across the sky, the thunder of impact, and the unleashing of something insidious. Spreading, multiplying, and transforming everything in its path, this diabolical intelligence will not be denied until the townsfolk—and eventually, all living things—are conquered. Until they are all crawling. . . .

**Web Crawling** Christopher Olston,Marc Najork,2010 The magic of search engines starts with crawling. While at first glance Web crawling may appear to be merely an application of breadth-first-search, the truth is that there are many challenges ranging from systems concerns such as managing very large data structures to theoretical questions such as how often to revisit evolving content sources. Web Crawling outlines the key scientific and practical challenges, describes the state-of-the-art models and solutions, and highlights avenues for future work. Web Crawling is intended for anyone who wishes to understand or develop crawler software, or conduct research related to crawling.

**Dungeon Crawler** Carl Matt Dinniman,2020-09-21 The apocalypse will be televised! A man. His ex-girlfriend's cat. A sadistic game show unlike anything in the universe: a dungeon crawl where survival depends on killing your prey in the most entertaining way possible. In a flash, every human-erected construction on Earth—from Buckingham Palace to the tiniest of sheds—collapses in a heap, sinking into the ground. The buildings and all the people inside have all been atomized and transformed into the dungeon: an 18-level labyrinth filled with traps, monsters, and loot. A dungeon so enormous, it circles the entire globe. Only a few dare venture inside. But once you're in, you can't get out. And what's worse, each level has a time limit. You have but days to find a staircase to the next level down, or it's game over. In this game, it's not about your strength or your dexterity. It's about your followers, your views. Your clout. It's about building an audience and killing those goblins with style. You can't just survive here. You gotta survive big. You gotta fight with vigor, with excitement. You gotta make them stand up and cheer. And if you do have that it factor, you may just find yourself with a following. That's the only way to truly survive in this game—with the help of the loot boxes dropped upon you by the generous benefactors watching from across the galaxy. They call it Dungeon Crawler World. But for Carl, it's anything but a game.

**Create a Web Crawler in Python** Antun Peicevic,2016-05-09 This book consists of two parts. In the first part of the book, you will learn how to download and install Python on your Windows or Linux system. You will learn what a variable is, how to perform arithmetic operations, if statement, for loops, how to capture user input, and much more. In the second part of the book we will cover the process of creating a web crawler in Python. A web crawler is a program that browses the World Wide Web in a methodical fashion for the purpose of collecting information. After you finish this book, you should have a working web crawler that you can use on your own website. Here is a list of topics covered in the book: Part 1 - Python basics Chapter 1 - Introduction - we go through the basics of Python. You will learn how to download and install Python on Windows and Linux, and all the ways you can run Python code. Chapter 2 - Basic programs - you will learn how to write your first program. We will describe variables and their data types and explain what strings are. Chapter 3 - Operators overview - we describe different types of operators found in Python: arithmetic, comparison, logical, assignment, membership, and identity operators. Chapter 4 - Conditional statements - we describe conditional statements. You will learn how to get user input and use logical operators in your programs. Chapter 5 - Loops - we show you what loops are. You will also learn how to use break, continue, and pass statements. Chapter 6 - Errors - you will learn how to deal with errors in your code. You will learn different types of errors, and how you can catch specific exceptions. Chapter 7 - Modules - you will learn what modules are and how you can use them in your programs. You will also learn how to find files on your disk. Chapter 8 - Strings - we will describe what strings are. You will also learn some useful string functions and how to escape characters in Python. Part 2 - Creating a web crawler - we will describe how you can create a fully functional web crawler. To speed up the crawling process, our web crawler will be developed as a multi-threaded program.

**Enhancement in Web Crawler Using Weighted Page Rank Algorithm Based on VOL** Sachin Gupta,2014-07-25 Master's Thesis from the year 2014 in the subject Computer Science - Miscellaneous, course: M.Tech, language: English, comment: Excellent, abstract: As the World Wide Web is growing rapidly day by day, the number of web pages is increasing into millions and trillions around the world. To make searching much easier for users, search engines came into existence. Web search engines are used to find specific information on the WWW. Without search engines, it would be almost impossible for us to locate anything on the Web unless or until we know a specific URL address. Every search engine maintains a central repository or databases of HTML documents in indexed form. Whenever a user query comes, searching is performed within that database of indexed web pages. The size of repository of every search engine can't accommodate each and every page available on the WWW. So it is desired that only the most relevant and important pages are stored in the database to increase the efficiency of search engines. This database of HTML documents is maintained by special software called Crawler. A Crawler is software that traverses the web and downloads web pages. Broad search engines as well as many more

specialized search tools rely on web crawlers to acquire large collections of pages for indexing and analysis. Since the Web is a distributed, dynamic and rapidly growing information resource, a crawler cannot download all pages. It is almost impossible for crawlers to crawl the whole web pages from World Wide Web. Crawlers crawls only fraction of web pages from World Wide Web. So a crawler should observe that the fraction of pages crawled must be most relevant and the most important ones, not just random pages. In our Work, we propose an extended architecture of web crawler of search engine, to crawl only relevant and important pages from WWW, which will lead to reduced sever overheads. With our proposed architecture we will also be optimizing the crawled data by removing leas

**Allis-Chalmers Tractors and Crawlers** Terry Dean, One of the most popular marques among antique-tractor collectors and restorers is Allis-Chalmers. This all-new guide reviews the most collectible Allis-Chalmers tractors and crawlers ever built, tackling by year of manufacture landmark machines like the Model 20-35, Model U, Model M crawler and Model G. Exclusive photography accompanies complete descriptions of basic model options, specifications, components, paint codes, serial numbers, design changes and promotional literature, while a price guide advises readers on what to look for in each model. Brief model histories and descriptions of common repair and restoration needs round out this complete reference for the legions of old-tractor enthusiasts.

**Jimmy and the Crawler** Raymond E. Feist,2023-07-04 In this fantastic tale, legendary author Raymond E. Feist returns to the city of Krondor and one of his most loved characters from the Riftwar Cycle, Jimmy the Hand. The Crawler: a name whispered in fear. . . In the crime-ridden back alleys of Krondor a rival gang has sprung up to threaten the Upright Man's Mockers. Does the Crawler control the rival gang? Where does his power come from? And does it threaten the peace of the Kingdom? James, personal squire to Prince Arutha of Krondor, but in the underworld known as the thief and trickster Jimmy the Hand, must travel to Kesh in disguise. There, working with William, lieutenant of the prince's household guard and son of the magician Pug, and Jazhara, niece to the Keshian lord Hazara-Khan, he must attempt to unmask the mysterious Crawler and rid Krondor of his influence.

**Antique American Tractor and Crawler Value Guide, Second Edition** Terry Dean Larry L. Swenson, Following the rating system generally established among car collectors, this comprehensive value guide provides the values, in five degrees of condition, of antique American farm tractors and crawlers built from the turn of the century through the 1950s. Each chapter is devoted to one of the period's major manufacturers -- John Deere, Farmall, Caterpillar, Oliver, Minneapolis-Moline, Ford, and more -- and the values listed are based on prices actually realized at auction. In addition, two expert collectors compare their notes on each model, while the expert photography of Randy Leffingwell depicts the tractors and crawlers discussed.

**Allis-Chalmers Farms Tractors and Crawlers Data Book** Terry Dean,2000 Beginning in 1914 and continuing through all major Allis-Chalmers farm tractors and crawlers built as late as 1963, this pocket-size compendium offers specifications and ratings for more than 60 models and their variants. The listings, accompanied by a selection of archival photos illustrating the tractors, include all the vital facts and figures an owner or prospective buyer needs. And the handy trim size makes it an ideal take-along reference for auctions and sales.

**The Crawlers** Philip K. Dick,2014-12-16 When bizarre creatures begin plaguing a small farming town, a man from the nearby radioactive science laboratory is sent to investigate and deal with the problem. Philip K. Dick was an American science-fiction novelist, short-story writer and essayist. His first short story, "Beyond Lies the Wub," was published shortly after his high school graduation. Some of his most famous short stories were adapted for film, including "The Minority Report," "Paycheck," "Second Variety" (adapted into the film *Screamers*) and "We Can Remember It For You Wholesale" (adapted into the film *Total Recall*). HarperCollins brings great works of literature to life in digital format, upholding the highest standards in ebook production and celebrating reading in all its forms. Look for more titles in the HarperCollins short-stories collection to build your digital library.

**Getting Structured Data from the Internet** Jay M. Patel,2020-12-13 Utilize web scraping at scale to quickly get unlimited amounts of free data available on the web into a structured format. This book teaches you to use Python scripts to crawl through websites at scale and scrape data from HTML and JavaScript-enabled pages and convert it into structured data formats such as CSV, Excel, JSON, or load it into a SQL database of your choice. This book goes beyond the basics of web scraping and covers advanced topics such as natural language processing (NLP) and text analytics to extract names of people, places, email addresses, contact details, etc., from a page at production scale using distributed big data techniques on an Amazon Web Services (AWS)-based cloud infrastructure. It book covers developing a robust data processing and ingestion pipeline on the Common Crawl corpus, containing petabytes of data publicly available and a web crawl data set available on AWS's registry of open data. Getting Structured Data from the Internet also includes a step-by-step tutorial on deploying your own crawlers using a production web scraping framework (such as Scrapy) and dealing with real-world issues (such as breaking Captcha, proxy IP rotation, and more). Code used in the book is provided to help you understand the

concepts in practice and write your own web crawler to power your business ideas. What You Will Learn Understand web scraping, its applications/uses, and how to avoid web scraping by hitting publicly available rest API endpoints to directly get data Develop a web scraper and crawler from scratch using lxml and BeautifulSoup library, and learn about scraping from JavaScript-enabled pages using Selenium Use AWS-based cloud computing with EC2, S3, Athena, SQS, and SNS to analyze, extract, and store useful insights from crawled pages Use SQL language on PostgreSQL running on Amazon Relational Database Service (RDS) and SQLite using SQLAlchemy Review sci-kit learn, Gensim, and spaCy to perform NLP tasks on scraped web pages such as name entity recognition, topic clustering (Kmeans, Agglomerative Clustering), topic modeling (LDA, NMF, LSI), topic classification (naive Bayes, Gradient Boosting Classifier) and text similarity (cosine distance-based nearest neighbors) Handle web archival file formats and explore Common Crawl open data on AWS Illustrate practical applications for web crawl data by building a similar website tool and a technology profiler similar to builtwith.com Write scripts to create a backlinks database on a web scale similar to Ahrefs.com, Moz.com, Majestic.com, etc., for search engine optimization (SEO), competitor research, and determining website domain authority and ranking Use web crawl data to build a news sentiment analysis system or alternative financial analysis covering stock market trading signals Write a production-ready crawler in Python using Scrapy framework and deal with practical workarounds for Captchas, IP rotation, and more Who This Book Is For Primary audience: data analysts and scientists with little to no exposure to real-world data processing challenges, secondary: experienced software developers doing web-heavy data processing who need a primer, tertiary: business owners and startup founders who need to know more about implementation to better direct their technical team

*Portals* Brian S. Pratt, 2010-02 After fleeing into The Devil's Kiln to escape death at the hands of those that he and his cohorts had unsuccessfully laid siege, Holk, a veteran warrior of many campaigns stumbles into a subterranean world from which there appears no escape. He discovers a network of caverns, lakes, and fungal expanses; each area isolated from the others. The only avenue from one to the next lies through a series of portals. Within this world he meets a mysterious being known only as The Merchant; a dragon; and a small human boy-child that has no interest in freeing this prison, for prison is what Holk believes it to be. Holk is alone and woefully lacking in resources. What aid he acquires comes from an unlikely source: a long-dead scribe.

*The Guardian and the Dream Crawler* SL Lewis,

*Performance Optimization of Web Crawler* Kavita Goel, 2023-02-03 Optimizing performance of crawler is the requirement in the area of crawling and searching. As web contains a huge volume of information and it is a challenging task to extract information, there is a need of the user interface for a user to extract information from the web. A Search engine is the user interface to extract information from web and crawler is a tool used by search engine to create a database. Search results generated by the search engine are derived from the results given by crawler. If crawler provides better results, it will give relevant results in searching also. Finding useful information from the web has inherent issues of page freshness, crawling multimedia contents, and duplicate contents. Crawling and indexing similar contents and URLs implies wastage of resources. Crawler gives duplicate results because of the bad crawling algorithm, poor quality ranking algorithm. This thesis contributes to the area of optimizing crawler's performance by removing duplicate URLs. Removing duplicate URLs at crawling level improves crawler's efficiency in terms of time and space also. Six popular search engines are at first analyzed for identifying the presence of redundancy in the content over 44 categories of user search interest. Further, the new algorithm based on the URL normalization in query parameter and categorization is developed. To test the effectiveness of the proposed algorithm, a proposed crawler has been developed. To compare and analyze the results another crawler i.e. base crawler based on breadth-first search has been developed. The results of proposed crawler are compared with results of the base crawler, and encouraging performance improvement in terms of crawling time, space, search engine execution time and reduction in the number of duplicates has been observed. The percentage improvement of crawling time between base crawler and proposed crawler varies from 0.086% to 17.44%. The proposed algorithm crawls a URL in a particular category which yields more relevant results. After applying URL normalization in query parameter, duplicate URL is removed which results in reducing crawling time and less number of fetched records. Thus, the proposed crawler leads to relevant results, high-level user experience and more satisfaction.

*Selecting Crawler Skidders by Comparing Relative Operating Costs* Paul L. Schillings, 1969 Costs of skidding with 25- to 80-drawbar hp. crawler tractors in southwestern Montana are analyzed and compared. Data include operating times, terrain classes, steepness of slopes, efficiency of operators, costs of owning and operating, and log production. Charts enable a user to quickly estimate skidding cost per MBF considering distance from log deck to log-making area, type of terrain, average slope, and efficiency of operator.

*The Shadow Crawler* Conray Tyler, 2020-09-15 The Shadow Crawler starts by Anodia The Great One speaking into existence four elite spirits out of the heavenly places. Brothers Xing, Takoda, Kyrious and Menus all battle for the right to have first rule over the entire world. During battle, it was like something came over the sons of Anodia, each different on how they combat. Menus who already had the staff from breaking up the four lands, and Menus with his combat skills was declared the winner to be first ruler. Menus empire had the luxury of first rule, on which he gave all his brothers a chance at worldly equality under his rule. Menus created a secret force called the Shadow Cats, which were huge pitch-black panthers. They will watch

in the shadows all of your secrets, and they will disclose secrets of the whole world to Menus. Kyrious had tremendous jealousy in his heart. He then formed a pact with himself to gain the staff of power, and dominate the world when he had the chance. Kyrious wouldn't be stopped, not even time itself is a barrier to his quest.
