JON H KAAS

📖 **Gibbon Conservation in the Anthropocene** Susan M. Cheyne,Carolyn Thompson,Peng-Fei Fan,Helen J. Chatterjee,2023-04-20 Hylobatids (gibbons and siamangs) are the smallest of the apes distinguished by their coordinated duets, territorial songs, arm-swinging locomotion, and small family group sizes. Although they are the most speciose of the apes boasting twenty species living in eleven countries, ninety-five percent are critically endangered or endangered according to the IUCN’s Red List of Threatened Species. Despite this, gibbons are often referred to as being ‘forgotten’ in the shadow of their great ape cousins because comparably they receive less research, funding and conservation attention. This is only the third book since the 1980s devoted to gibbons, and presents cutting-edge research covering a wide variety of topics including hylobatid ecology, conservation, phylogenetics and taxonomy. Written by gibbon researchers and practitioners from across the world, the book discusses conservation challenges in the Anthropocene and presents practice-based approaches and strategies to save these singing, swinging apes from extinction.

📖 **Evolution of Gibbons and Siamang** Ulrich H. Reichard,Hirohisa Hirai,Claudia Barelli,2016-08-19 This volume provides insight into gibbon diet and community ecology, the mating system and reproduction, and conservation biology, all topics which represent areas of substantial progress in understanding socio-ecological flexibility and conservation needs of the hylobatid family. This work analyzes hylobatid evolution by synthesizing recent and ongoing studies of molecular phylogeny, morphology, and cognition in a framework of gibbon and siamang evolution. With its clearly different perspective, this book is written to be read, referenced, and added to the bookshelves of scientists, librarians, and the interested public.

📖 **Hainan Gibbon** Ben Garrod,2022-05-12 TV scientist Ben Garrod presents the biggest extinction events ever, told from the point of view of evolution’s superstars, the most incredible animals ever to swim, stalk, slither or walk our planet. Whether you’re 9 or 90, his unique exploration of the most destructive, yet most creative, force in nature makes top level science fun. Can we make the Hainan gibbon a super-survivor? It’s one of our closest living relatives and among the most endangered animals on our planet. Can we change our role in the story of life, from being super-careless to being super-savers and do what we can to help our most interesting, incredible and important species from going extinct? The future depends on us. ‘An absolutely fascinating read... Highly recommended.’ BookTrust Collect all eight books about animals we have lost in mass extinctions caused by asteroids or mega-volcanoes, clashing continents and climate change. Past brought to full-colour life by palaeoartist Gabriel Ugueto

📖 **A Preliminary Study of the Behavior and Socio-ecology of Black Gibbons (Hylobates concolor) in Yunnan Province, People’s Republic of China** Lori Kay Sheeran,1993

📖 **Infrastructure Development and Ape Conservation** Helga Rainer,Arcus Foundation,2018-11-08 Presents an objective rigorous analysis of relevant issues along with case studies to examine the interface between ape conservation and infrastructure development. This title is also available as Open Access via Cambridge Core.

📖 **Evolutionary Neuroscience** Jon H Kaas,2020-05-30 Evolutionary Neuroscience, Second Edition, is a collection of chapters on brain evolution that combines selected topics from the recent comprehensive reference, Evolution of Nervous Systems (Elsevier, Academic Press, 2017, 9780128040423). The selected chapters cover a broad range of topics, from historical theory, to the most recent deductions from comparative studies of brains. The articles are organized in sections focused on history, concepts and theory, the evolution of brains from early vertebrates to present-day fishes, amphibians, reptiles and birds, the evolution of mammalian brains, and the evolution of primate brains, including human brains. Each chapter is written by a leader or leaders in the field. Specific topics include brain character reconstruction, principles of brain scaling, basic features of vertebrate brains, the evolution of the major sensory systems, other parts of brains, what we can learn from fossils, the origin of neocortex, and the evolution of specializations of human brains. The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present-day vertebrates. Provides the most comprehensive, authoritative and up-to-date single volume collection on brain evolution Presents a full color treatment, with many illustrations Written by leading scholars and experts Features chapters on brain character reconstruction, principles of brain scaling, basic features of vertebrate brains, the evolution of the major sensory systems, and other parts of brains Discusses what we can learn from fossils, the origin of neocortex, and the evolution of specializations of human brains

📖 **The Gibbons** Susan Lappan,Danielle Whittaker,2009-06-02 It is a great honor to be asked to introduce this exciting new volume, having been heavily involved in the first comprehensive synthesis in the early 1980s. Gibbons are the most enthralling of primates. On the one hand, they are the most appealing animals, with their upright posture and body shape, facial markings, dramatic arm-swinging locomotion and suspensory postures, and devastating duets; on the other hand, the small apes are the most diverse, hence biologically valuable and informative, of our closest relatives. It is hard for me to believe that it is 40 years to the month since I first set foot on the Malay Peninsula to start my doctoral study of the siamang. I am very proud to have followed in the footsteps of the great pioneer of primate field study, Clarence Ray Carpenter (CR or Ray, who I was fortunate to meet twice, in Pennsylvania and in Zurich), first in Central America (in 1967) and then in Southeast Asia. It is 75 years since he studied howler monkeys on Barro Colorado Island in the Panama Canal Zone. It is 70 years since he studied the white-handed gibbon in Thailand.

📖 **Killing, Capture, Trade and Ape Conservation** Arcus Foundation,2021-04-29 An objective analysis of relevant issues and case studies to further the ape conservation agenda around killing, capture and trade.

📖 **Evolution of Nervous Systems** Georg F. Striedter,Theodore H. Bullock,Todd M. Preuss,John Rubenstein,Leah A. Krubitzer,2016-11-23 Evolution of Nervous Systems, Second Edition, Four Volume Set is a unique, major reference which offers the gold standard for those interested both in evolution and nervous systems. All biology only makes sense when seen in the light of evolution, and this is especially true for the nervous system. All animals have nervous systems that mediate their behaviors, many of them species specific, yet these nervous systems all evolved from the simple nervous system of a common ancestor. To understand these nervous systems, we need to know how they vary and how this variation emerged in evolution. In the first edition of this important reference work, over 100 distinguished neuroscientists assembled the current state-of-the-art knowledge on how nervous systems have evolved throughout the animal kingdom. This second edition remains rich in detail and broad in scope, outlining the changes in brain and nervous system organization that occurred from the first invertebrates and vertebrates, to present day fishes, reptiles, birds, mammals, and especially primates, including humans. The book also includes wholly new content, fully updating the chapters in the previous edition and offering brand new content on current developments in the field. Each of the volumes has been carefully restructured to offer expanded coverage of non-mammalian taxa, mammals, primates, and the human nervous system. The basic principles of brain evolution are discussed, as are mechanisms of change. The reader can select from chapters on highly specific topics or those that provide an overview of current thinking and approaches, making this an indispensable work for students and researchers alike. Presents a broad range of topics, ranging from genetic control of development in invertebrates, to human cognition, offering a one-stop resource for the evolution of nervous systems throughout the animal kingdom Incorporates the expertise of over 100 outstanding investigators who provide their conclusions in the context of the latest experimental results Presents areas of disagreement and consensus views that provide a holistic view of the subjects under discussion

📖 **Primate Behavioral Ecology** Karen B. Strier,2016-08-25 This comprehensive introductory text integrates evolutionary, ecological, and demographic perspectives with new results from field studies and contemporary noninvasive molecular and hormonal techniques to understand how different primates behave and the significance of these insights for primate conservation. Each chapter is organized around the major research themes in the field, with Strier emphasizing the interplay between theory, observations, and conservation issues. Examples are drawn from the classic primate field studies as well as more recent studies on previously neglected species, illustrating the vast behavioral variation that exists across the primate order. Primate Behavioral Ecology 5th Edition also examines how anthropogenic activities are negatively impacting primate populations, including a thorough analysis of behavioural plasticity and its implications. This fully updated new edition incorporates exciting new discoveries and the most up-to-date approaches in the field to provide an invaluable overview of the field of primate behavioral ecology and its applications to primate conservation. It is considered to be a “must read” for all students interested in primates.

📖 **Disease, Health and Ape Conservation** Arcus Foundation,2024-05-31 This fifth volume of State of the Apes brings together original research and analysis with topical case studies and emerging best practice to further the ape conservation agenda around disease and health. It provides an overview of relevant disease and health issues and explores factors such as the ethics of intervening in and managing ape health; the impact of research and tourism on apes; the one health approach; and disaster management and the protection of apes. It shows how the welfare of apes is interrelated with that of the people who share their habitats, while also demonstrating the benefits of integrating ape conservation in health, socioeconomic activities (such as in the extractive industries, industrial agriculture and infrastructure development), and regulatory policy and practice at all levels, from the local to the international. This title is also available as Open Access via Cambridge Core.

📖 **The Gibbons of Khao Yai** Thad Q. Bartlett,2015-08-26 Primatologists have long viewed small fruiting trees, like figs, as the reason for gibbons’ territorial and monogamous behavior. However, at Khao Yai National Park in Thailand where gibbons are prevalent, figs are one of the largest trees in the forest. In this long-term field study, Bartlett takes up this apparent contradiction, and follows gibbons as their major food sources wax and wane over time. This is an important reference on gibbons and the study of small apes which provides a thorough, expansive coverage of the relationship between fruit abundance and diet, range use, and intergroup interactions in gibbon apes. The Gibbons of Khao Yai: Seasonal Variation in Behavior and Ecology provides an essential resource for students conducting research in this field.

📖 **The Dialectical Primatologist** Nicholas Malone,2021-10-24 The Dialectical Primatologist identifies the essential parameters vital for the continued coexistence of hominoids (apes and humans), synthesising primate research and conservation in order to develop culturally compelling conservation strategies required for the facilitation of hominoid coexistence. As unsustainable human activities threaten many primate species with extinction, effective conservation

STRATEGIES FOR ENDANGERED PRIMATES WILL DEPEND UPON OUR UNDERSTANDING OF BEHAVIOURAL RESPONSE TO HUMAN-MODIFIED HABITATS. THIS IS ESPECIALLY TRUE FOR THE APES, WHO ARE ARGUABLY OUR MOST POWERFUL CONNECTION TO THE NATURAL WORLD. RECOGNISING THE INSEPARABILITY OF THE NATURAL AND THE SOCIAL, THE DIALECTICAL APPROACH IN THIS BOOK HIGHLIGHTS THE HETEROGENEITY AND COMPLEXITY OF ECOLOGICAL RELATIONSHIPS. MALONE STRESSES THAT APE CONSERVATION REQUIRES A SYNTHESIS OF NATURE AND CULTURE THAT RECOGNISES THEIR INSEPARABILITY IN ECOLOGICAL RELATIONSHIPS THAT ARE BOTH BIOPHYSICALLY AND SOCIALLY FORMED, AND SEEKS TO IDENTIFY THE PATHWAYS THAT LEAD TO EITHER HOMINOID COEXISTENCE OR, ALTERNATIVELY, EXTINCTION. THIS BOOK WILL BE OF KEEN INTEREST TO ACADEMICS IN BIOLOGICAL ANTHROPOLOGY, PRIMATOLOGY, ENVIRONMENTAL ANTHROPOLOGY, CONSERVATION AND HUMAN-ANIMAL STUDIES.
