Curran, Shuo-Yan Chou, Amy J. C. Trappey, 2008-08-31 "Collaborative Product and Service Life Cycle Management for a Sustainable World" gathers together papers from the 15th ISPE International Conference on Concurrent Engineering (CE2008), to stimulate the new thinking that is so crucial to our sustained productivity enhancement and quality of life. It is already evident in this new century that the desire for sustainable development is increasingly driving the market to reach for new and innovative solutions that more effectively utilize the resources we have inherited from previous generations; with the obvious responsibility to future generations. Human productivity and progress can be positively engineered and managed in harmony with the provision and needs of our natural environment. One century on from the industrial revolution, this is now the time of the sustainable revolution; requiring holistic technological, process and people integrated solutions to sustained socio-economic enhancement.

### **The Legality of Economic Activities in Occupied Territories** Antoine Duval, Eva Kassoti, 2020-06-09

This edited volume explores the question of the lawfulness under international law of economic activities in occupied territories from the perspectives of international law, EU law, and business and human rights. Providing a multi-level overview of relevant practices, policies and cases, the book is divided in three parts, each dealing with how different legal fields have come to grips with the challenges brought about by the question of the lawfulness under international law of economic activities in occupied territories. The first part includes contributions pertaining to the international law dimension of the question. It contains chapters on the conjunction between *jus in bello*, *jus ad bellum* and international human rights law in the context of exploitation of natural resources in territories under belligerent occupation; on third party

that apply to an almost infinite variety of valuation problem situations. Once these connections have been introduced, the reader will be equipped with an understanding of the underlying concepts of aircraft valuation processes and techniques and the subsequent financing alternatives available to fund aircraft assets. This is an essential book for airline professionals, aircraft leasing companies, consultants, bankers, government officials, and students of aircraft finance. It is an approachable resource for those without a formal background in finance.

**Garuda Indonesia** Jozef Mols,2022-06-20 On January 26, 1949, Garuda Indonesia was officially established as Indonesia's government-owned flag carrier. To begin with, the airline focused on domestic and regional travel. However, in 1962, the Dutch-occupied island of Dutch New Guinea was added to the Indonesian territory and Garuda faced the huge challenge of starting up flights to the very remote and isolated settlements of Irian Jaya. Fortunately, the airline had the assistance of another Indonesian government-owned airline, Merpati, which would later become a feeder and subsidiary of Garuda. In the mid-1980s, a massive reorganization led to Garuda offering international flights, which required the modernization of the entire fleet. The late '90s saw a new management having to cope with the disastrous effects of the Asian financial crisis closely followed by the deregulation of the aviation industry in 2000, which greatly increased competition in the domestic market. Over subsequent years, Garuda has faced many more challenges, from the effects of the 9/11 terrorist attacks and the Bali bombings to the 2003 SARS epidemic and the COVID-19 pandemic. However, despite these setbacks, it has successfully transitioned from a small domestic carrier to a player on the international stage. This fully illustrated volume looks at Garuda's turbulent history from its involvement in Indonesia's postwar struggle for independence to operations during the 2020 COVID-19 pandemic.

**Evolutionary Dynamics of The Regional Airline Industry** Mr Ernest S Arvai,Dr Addison M Schonland,2014-11-13 The regional aircraft market has, in recent years, been defined as the market below 100 seats internationally, and below about 76 seats in the United States. The pending introduction of the Bombardier CSeries and Embraer E2 Jets, moves this definition. These new technology 100-150 seat jets bridge the gap between smaller regional aircraft and the 150 seat and above mainline single-aisle aircraft. AirInsight has extended our definition of regional aircraft to include the crossover segment of new aircraft in the 100- 150 seats range, and we now consider the 150 seats plus market as the new mainline sector.
