Topics include, but are not limited to: Algebraic combinatorics, combinatorial geometry, combinatorial number theory, combinatorial optimization, designs and configurations, enumerative combinatorics, extremal combinatorics, ordered sets, random methods, topological combinatorics.

**Consciousness** William G. Lycan, 1995-03-02 In this book, William Lycan defends an original theory of mind that he calls homuncular functionalism. What is consciousness? The answer to this question has been pondered upon, grappled with, and argued about since time immemorial. There has never been an answer that achieved consensus; certainly philosophers have never agreed. In this book, William Lycan defends an original theory of mind that he calls homuncular functionalism. He argues that human beings are functionally organized information-processing systems who have no non-physical parts or properties. However, Lycan also recognizes the subjective phenomenal qualities of mental states and events, and an important sense in which mind is over and above mere chemical matter. Along the way, Lycan reviews some diverse philosophical accounts of consciousness—including those of Kripke, Block, Campbell, Sellars, and Castañeda, among others—and demonstrates how what is valuable in each opposing view can be accommodated within his own theory. Consciousness is Lycan's most ambitious book, one that has engaged his attention for years. He handles a fascinating subject in a unique and undoubtedly controversial manner that will make this book a mainstay in the field of philosophy of mind. Consciousness, with these earlier works, is a Bradford Book.

Graph Theory, Computational Intelligence and Thought Marina Lipshteyn, Vadim E. Levit, Ross McConnell, 2009-07-27 Martin Charles Golumbic has been making seminal contributions to algorithmic graph theory and artificial intelligence throughout his career. He is universally admired as a long-standing pillar of the discipline of computer science. He has contributed to the development of fundamental research in artificial intelligence in the area of complexity and spatial-temporal reasoning as well as in the area of compiler optimization. Golumbic's work in graph theory led to the study of new perfect graph families such as tolerance graphs, which generalize the classical graph notions of interval graph and comparability graph. He is credited with introducing the systematic study of algorithmic aspects in intersection graph theory, and initiated research on new structured families of graphs including the edge intersection graphs of paths in trees (EPT) and trivially perfect graphs. Golumbic is currently the founder and director of the Caesarea Edmond Benjamin de Rothschild Institute for Interdisciplinary Applications of Computer Science at the University of Haifa. He also served as chairman of the Israeli Association of Artificial Intelligence (1998-2004), and founded and chaired numerous international symposia in discrete mathematics and in the foundations of artificial intelligence. This Festschrift volume, published in honor of Martin Charles Golumbic on the occasion of his 60th birthday, contains 20 papers, written by graduate students, research collaborators, and computer science colleagues, who gathered at a conference on subjects related to Martin Golumbic's manifold contributions in the field of algorithmic graph theory and artificial intelligence, held in Jerusalem, Tiberias and Haifa, Israel in September 2008.

*Material Constitution* Michael Cannon Rea, 1997 The only anthology available on material constitution, this book collects important recent work on well known puzzles in metaphysics and philosophy of mind. The extensive, clearly written introduction helps to make the essays accessible to a wide audience.

*Graphs and Order* Ivan Rival, 2012-12-06 This volume contains the accounts of the principal survey papers presented at GRAPHS and ORDER, held at Banff, Canada from May 18 to May 31, 1984. This conference was supported by grants from the N.A.T.O. Advanced Study Institute programme, the Natural Sciences and Engineering Research Council of Canada and the University of Calgary. We are grateful for all of this considerable support. Almost fifty years ago the first Symposium on Lattice Theory was held in Charlottesville, U.S.A. On that occasion the principal lectures were delivered by G. Birkhoff, O. Ore and M.H. Stone. In those days the theory of ordered sets was thought to be a vigorous relative of group theory. Some twenty-five years ago the Symposium on Partially Ordered Sets and Lattice Theory was held in Monterey, U.S.A. Among the principal speakers at that meeting were R.P. Dilworth, B. Jonsson, A. Tarski and G. Birkhoff. Lattice theory had turned inward: it was concerned primarily with problems about lattices themselves. As a matter of fact the problems that were then posed have, by now, in many instances, been completely solved.

**Parameterized and Exact Computation** Dimitrios M. Thilikos, Gerhard J. Woeginger, 2012-08-30 This book constitutes the refereed proceedings of the 7th International Symposium on Parameterized and Exact Computation, IPEC 2012, in Ljubljana, Slovenia, in September 2012. The 21 revised full papers presented together with 2 keynote talks were carefully reviewed and selected from 37 submissions. The topics addressed cover research in all aspects of parameterized/exact algorithms and complexity including but are not limited to new techniques for the design and analysis of parameterized and exact algorithms; fixed-parameter tractability results; parameterized complexity theory; relationship between parameterized complexity and traditional complexity classifications; applications of parameterized and exact computation; and implementation issues of parameterized and exact algorithms.

*The Sensual (quadratic) Form* John Horton Conway, 1997-12-31 John Horton Conway's unique approach to quadratic forms was the subject of the Hedrick Lectures that he gave in August of 1991 at the Joint Meetings of the Mathematical Association of America and the American Mathematical Society in Orono, Maine. This book presents the substance of those lectures. The book should not be thought of as a serious textbook on the theory of quadratic forms. It consists rather of a number of essays on particular aspects of quadratic forms that have interested the author. The lectures are self-contained and will be accessible to the generally informed reader who has no particular background in quadratic form theory. The minor exceptions should not interrupt the flow of ideas. The afterthoughts to the lectures contain discussion of related matters that occasionally presuppose greater knowledge.

Crosscurrents in Phenomenology R. Bruzina, B. Wilshire, 2012-12-06 One of the greatest and oldest of images for expressing living change is that of the movement of waters. Rivers particularly, in their relentless motion, in the constant searching direction of their travel, in the confluence of tributaries and the division into channels by which identity is constituted and dispersed and once more reestablished, have stood as metaphors for movements in a variety of realms—politics, religion, literature, thought. Among philosophic movements, phenomenology and existentialism are discernible as one such movement of ideas analogous in configuration to the flow of a river in its channel or network of channels. The course taken by

the stream of phenomenology and existential philosophy in North America is easily seen from the contents of the six volumes of collected papers from the annual meetings of the Society for Phenomenology and Existential Philosophy that have preceded the present selection. What soon becomes clear in general, and is evident as well in the present volume, is that phenomenological and existential philosophies are far from being homogeneous, are far from showing an identity as to the sources from which they derive their energy, or the themes that they carry forward toward clarification. And yet there is a confluence, a convergence of orientation, sympathy, and conceptuality, INTRODUCTION 4 SO that problematics harmonize and complement and mutually enrich.

Graph-Theoretic Concepts in Computer Science Michael A. Bekos,Michael Kaufmann,2022-09-30 This LNCS 13453 constitutes the thoroughly refereed proceedings of the 48th International Workshop on Graph-Theoretic Concepts in Computer Science, WG 2022.The 32 full papers presented in this volume were carefully reviewed and selected from a total of 96 submissions. The WG 2022 workshop aims to merge theory and practice by demonstrating how concepts from Graph Theory can be applied to various areas in Computer Science, or by extracting new graph theoretic problems from applications.

Texts on Texts and Textuality E.F. Kaelin,2022-07-18 Texts on Texts and Textuality argues the case for an American phenomenology as applied to works of literary artworks. The argument is made by a surrounding frame (the Preface and the Afterword) that encloses ten chapters. The chapters are divided into two parts: the phenomenological theory and practical criticism. In making his case, Kaelin traces the development in the American academic tradition from the American New Criticism through structuralism to the French nouvelle critique. He calls his theory phenomenological structuralism, and shows its derivation from American pragmatism (contextualism) to an unabashed phenomenology through the criticisms of Roman Ingarden, Martin Heidegger, and Paul Ricoeur. The structuralism derives from the work of Ferdinand de Saussure, as incorporated into the philosophical linguistics of Maurice Merleau-Ponty. Part II contains five chapters, each concerned with either direct application of the theory in acts of criticism, or in the metacriticism of accepted critical theories, such as the Aristotelians of early dramatic critics (Chapter 6), or of applied procedures in recent academic critical circles (Chapter 10). The argument is concluded in the author's Afterword, where pedagogical issues are introduced to suggest the future applicability of the theory. A glossary of technical and new terms is added, and a double index - of names and a subject matter - is included to map out the author's own interpretation of his bibliographic references.
