

Curtiss Wright Model 21

Gerald Balzer

Curtiss-Wright Kirk W. House, 2005 The oldest names in aviation joined forces in 1929, when Wright Aeronautical and Curtiss Aeroplane formed the giant Curtiss-Wright Corporation. Curtiss airplanes were already “the best things with wings,” while Charles Lawrance had made Wright powerplants the leader in American radial engines. Aviation founding father Glenn Curtiss, along with superstars Charles A. Lindbergh, Jimmy Doolittle, Admiral Byrd, and “Wrong-Way” Corrigan, all blazed skytrails with Wright engines and Curtiss wings. Tiny Sparrowhawk biplane fighters flew from airborne dirigibles. Huge factories poured out war birds in tens of thousands for World War II. Pilots flew them everywhere, from the African desert to Alaskan ice, South Sea islands, and even the Taj Mahal. Relive those days when women, old men, and teenagers kept the factories roaring, and follow Curtiss-Wright clear into the 21st century.

The Curtiss-wright At-9 Dan Hagedorn, 2019-05-19 This book examines the genesis of the AT-9 design, its competitors and, eventually, comrades-in-arms, with whom AT-9s were always literally the best and the brightest, and looks at the fielding of the aircraft to the 24 initial stations as well as an astonishing number of unusual and special assignments - including assignment to line, tactical units. After producing 791 aircraft between September 1941 and January 31, 1943, and assigning every single one of them, and having served actively and continuously through to VJ-Day, exactly one complete AT-9 survives, and this solitary example is actually a composite of several aircraft.

Birdmen Lawrence Goldstone, 2014-05-06 From acclaimed historian Lawrence Goldstone comes a thrilling narrative of courage, determination, and competition: the story of the intense rivalry that fueled the rise of American aviation. The feud between this nation’s great air pioneers, the Wright brothers and Glenn Curtiss, was a collision of unyielding and profoundly American personalities. On one side, a pair of tenacious siblings who together had solved the centuries-old riddle of powered, heavier-than-air flight. On the other, an audacious motorcycle racer whose innovative aircraft became synonymous in the public mind with death-defying stunts. For more than a decade, they battled each other in court, at air shows, and in the newspapers. The outcome of this contest of wills would shape the course of aviation history—and take a fearsome toll on the men involved. Birdmen sets the engrossing story of the Wrights’ war with Curtiss against the thrilling backdrop of the early years of manned flight, and is rich with period detail and larger-than-life personalities: Thomas Scott Baldwin, or “Cap’t Tom” as he styled himself, who invented the parachute and almost convinced the world that balloons were the future of aviation; John Moisant, the dapper daredevil who took to the skies after three failed attempts to overthrow the government of El Salvador, then quickly emerged as a celebrity flyer; and Harriet Quimby, the statuesque silent-film beauty who became the first woman to fly across the English Channel. And then there is Lincoln Beachey, perhaps the greatest aviator who ever lived, who dazzled crowds with an array of trademark twists and dives—and best embodied the romance with death that fueled so many of aviation’s earliest heroes. A dramatic story of

unimaginable bravery in the air and brutal competition on the ground, Birdmen is at once a thrill ride through flight's wild early years and a surprising look at the personal clash that fueled America's race to the skies. Praise for Birdmen "A meticulously researched account of the first few hectic, tangled years of aviation and the curious characters who pursued it . . . a worthy companion to Richard Holmes's marvelous history of ballooning, Falling Upwards."—Time "The daredevil scientists and engineers who forged the field of aeronautics spring vividly to life in Lawrence Goldstone's history."—Nature "The history of the development of an integral part of the modern world and a fascinating portrayal of how a group of men and women achieved a dream that had captivated humanity for centuries."—The Christian Science Monitor "Captivating and wonderfully presented . . . a fine book about these rival pioneers."—The Wall Street Journal "[A] vivid story of invention, vendettas, derring-do, media hype and patent fights [with] modern resonance."—Financial Times "A powerful story that contrasts soaring hopes with the anchors of ego and courtroom."—Kirkus Reviews "A riveting narrative about the pioneering era of aeronautics in America and beyond . . . Goldstone raises questions of enduring importance regarding innovation and the indefinite exertion of control over ideas that go public."—Publishers Weekly (starred review)

American Secret Pusher Fighters of World War II Gerald Balzer,2008 American Secret Pusher Fighters of World War II analyzes the state of military aircraft procurement just prior to the start of World War II. It provides insight into the difficulties encountered by America's air services in dealing with an isolationist Congress and a limited mindset in the Army, which was seemingly indifferent to the aeronautical progress being made in Europe by the British and Germans. The book then focuses on the three winners of the 1940 fighter competition - the Vultee XP-54, the Curtiss XP-55, and the Northrop XP-56. Each of these radical designs - engine in the back (aka Pusher) using small canards in front, or, in the case of the XP-56, essentially a flying wing, used non-strategic materials and were developed in secret. At the time, the aerodynamics of these aircraft far outpaced engine development. In addition, this book details the technical difficulties of mating an advanced aircraft design with inadequate engine development.

Hero of the Air William F Trimble,2010-05-15 This book focuses on the role of Glenn H. Curtiss in the origins of aviation in the United States Navy. A self-taught mechanic and inventor, Curtiss was a key figure in the development of the airplane during the early part of the century. His contributions are generally well known, among them a control system using the aileron instead of the Wrights' wing-warping, the first successful hydro-airplane and flying boat, among other developments. Curtiss's links to the Navy came as result of advocates of aviation in the Navy, chief among them Captain Washington I. Chambers, who recognized that the navy had special requirements for airplanes and their operations, and for aviators and their training. In a partnership with the navy, Curtiss helped meet the special requirements of the service for aircraft, particularly those with the potential for operating with naval vessels at sea or in conducting long-distance flights over water. He also was

instrumental in training the first naval aviators. Curtiss and the navy continued their collaboration through World War I, reaching a climax in 1919 with the first transatlantic flight by the famed Navy-Curtiss NC flying boats. The book addresses the broader implications of the Curtiss-Navy collaboration in the context of the long-standing trend of government-private cooperation in the introduction and development of new technologies. It also explores the interactive dynamics of weapons procurement and technological change within a large and entrenched bureaucracy and helps lay to rest the persistent myth that the navy resisted the introduction of aviation. The pioneering work of Curtiss and his close ties with Chambers and others helped the navy to define the role of aviation in the years up to and through World War I. The book will rely heavily on primary source materials from a variety of archival collections, including the Library of Congress, National Archives, National Air and Space Museum, and the Glenn H. Curtiss Museum.

Unlocking The Sky Seth Shulman, 2009-10-13 *Unlocking the Sky* tells the extraordinary tale of the race to design, refine, and manufacture a manned flying machine, a race that took place in the air, on the ground, and in the courtrooms of America. While the Wright brothers threw a veil of secrecy over their flying machine, Glenn Hammond Curtiss -- perhaps the greatest aviator and aeronautical inventor of all time -- freely exchanged information with engineers in America and abroad, resulting in his famous airplane, the June Bug, which made the first ever public flight in America. Fiercely jealous, the Wright brothers took to the courts to keep Curtiss and his airplane out of the sky and off the market. Ultimately, however, it was Curtiss's innovations and designs, not the Wright brothers', that served as the model for the modern airplane.

Kurdish Armour Against ISIS Ed Nash, Alaric Searle, 2021-09-16 One of the most remarkable mechanized campaigns of recent years pitted the brutal and heavily armed jihadis of Islamic State against an improvised force belonging to the Kurdish YPG (later the SDF). While some Kurdish vehicles were originally from Syrian Army stocks or captured from ISIS, many others were extraordinary homemade AFVs based on truck or digger mechanicals, or duskas, the Kurds' version of the technical. Before US air power was sent to Syria, these were the Kurds' most powerful and mobile weapons. Co-written by a British volunteer who fought with the Kurds and an academic expert on armoured warfare, this study explains how the Kurds built and used their AFVs in the war against 'Daesh', and identifies as far as possible which vehicles took part in major battles, such as Kobane, Manbij and Raqqa. With detailed new artwork depicting the Kurds' range of armour and many previously unpublished photos, this is an original and fascinating look at modern improvised mechanized warfare.

Glenn Curtiss C. R. Roseberry, 1991-09-01 Glenn Curtiss (1878–1930) was a self-taught aeronautical engineer, a self-made industrialist, and one of the first airplane pilots, the model for “Tom Swift.” C. R. Roseberry’s biography begins with Curtiss’s years in Hammondsport, New York, his experiments with designing and learning to fly his own airplanes, and his many “firsts” in aviation history. Establishing one of the first aviation schools, Curtiss also developed a highly successful aviation company and designed one of the most popular early American planes—the Curtiss JN-4 (the “Jenny”). More than just a biography, this is also a well-documented history of the

development of aviation and the key figures associated with it during the first three crucial decades of this century. Through an examination of Curtiss's dealings with people such as Alexander Graham Bell, his original partner, and Wilbur and Orville Wright, his most important rivals, Roseberry provides insight into the overall development of flight in America. Aviation enthusiasts, historians, those interested in American technology and industry, and all who enjoy a good story will welcome this book.

Curtiss SOC Seagull Steve Ginter, 2011 The Curtiss SOC Seagull was a United States single-engine scout observation biplane aircraft, designed by Alexander Solla of the Curtiss-Wright Corporation for the United States Navy. The aircraft served on battleships and cruisers in a seaplane configuration, being launched by catapult and recovered from a sea landing. The wings folded back against the fuselage for storage aboard ship. When based ashore or on carriers the single float was replaced by fixed wheeled landing gear.

Warplane 13 Edwin Hoogschagen, 2023-02-10 The CW-21 was designed during the late 1930's. It combined light weight construction with a powerful engine, which resulted in an excellent rate of climb and manoeuvrability, allowing the fighter to quickly reach the height of attacking enemy aircraft, and attack them. The prototype was sent to China as demonstrator and an order for three aircraft, plus a further 32 as kits, followed. These would be assembled locally. Only the three production machines arrived in the chaos of war and would never see actual combat. A second modified variant was ordered by the Dutch government and 24 were delivered to the Netherlands Indies. The CW-21s were outnumbered and outgunned when the Japanese launched their attack on the Netherlands Indies. Despite the poor outlook, the pilots flying them gave up a good fight...

A Few Planes for China Eugenie Buchan, 2017-11-07 On December 7, 1941, the surprise attack on Pearl Harbor plunged the United States into armed conflict with Japan. In the following months, the Japanese seemed unbeatable as they seized American, British, and European territory across the Pacific: the Philippines, Singapore, Hong Kong, the Dutch East Indies. Nonetheless, in those dark days, the US press began to pick up reports about a group of American mercenaries who were bringing down enemy planes over Burma and western China. The pilots quickly became known as Flying Tigers, and a legend was born. But who were these flyers for hire and how did they wind up in the British colony of Burma? The standard version of events is that in 1940 Colonel Claire Chennault went to Washington and convinced the Roosevelt administration to establish, fund, and equip covert air squadrons that could attack the Japanese in China and possibly bomb Tokyo even before a declaration of war existed between the United States and Japan. That was hardly the case: although present at its creation, Chennault did not create the American Volunteer Group. In *A Few Planes for China*, Eugenie Buchan draws on wide-ranging new sources to overturn seventy years of received wisdom about the genesis of the Flying Tigers. This strange experiment in airpower was accidental rather than intentional; haphazard decisions and changing threat perceptions shaped its organization and deprived it of resources. In the end it was the British - more than any American in or out of government - who got the Tigers off the ground. On the eve of Pearl Harbor, the most important man behind the Flying Tigers was not Claire Chennault but Winston Churchill.

303rd Bombardment Group Brian D O'Neill,2012-11-20 The first title in the Elite Units series to deal with an American bombardment group, this title focuses on the 303rd BG, dubbed the 'Hells Angels.' One of the very first B-17 units assigned to the newly created Eighth Air Force in England in September 1942, the 303rd was in the vanguard of the daylight bombing campaign through to VE-Day. Awarded a Distinguished Unit Citation in January 1944, the 303rd also had two of its aircrewmen presented with the Medal of Honor, Americas ultimate military decoration. Brian O Neill brings the group's colourful combat history to life with a mix of first-hand accounts, raw statistics and concise mission narrative.

Desert Sniper Ed Nash,2019-09-17 What makes an ordinary but highly educated Englishman, with no previous military training, decide to travel and fight in one of the most brutal conflicts on the planet? Desert Sniper is an extraordinary, true account of one man's journey from well-meaning volunteer to battle-scarred combat sniper, placing himself daily in the line of fire to fight one of the greatest evils of this new century. Ed Nash has travelled across the globe, and is working with refugees in Burma, when he first becomes aware of the terrible atrocities being committed under ISIS's newly established 'Caliphate', covering vast tracts of Iraq and Syria. In June 2015, he chooses to undertake the hazardous journey, via Northern Iraq, to Syria, to join ill-equipped and poorly trained but battle-hardened Kurdish forces as they attempt to halt Daesh's relentless advance. Nash is an articulate, insightful and refreshingly honest companion as he unpacks the shifting complexities of the political and military situation in which he finds himself. As one of a motley band of foreign volunteer fighters - veterans of other conflicts, adventurers and misfits, from many different countries - we follow him through his rudimentary training and early combat operations as he and his companions slowly gain the trust and respect of their Kurdish colleagues. Nash shows us the realities of the war on the ground in Syria in fascinating detail; the privations of the ordinary Kurdish soldiers, the terrible price paid by civilians caught in the cross-fire, the ever-present danger of lethal suicide bombers and occasional moments of striking beauty in amongst the carnage. A modern classic in the making, Desert Sniper will prove to be one of the most unforgettable accounts to emerge from the war against ISIS.
