Nicholas John Hoff

Stresses in and General Instability of Monocoque Cylinders with Cutouts Nicholas John Hoff, 1949 All but one cylinder failed in general instability. The one that did not show the general-instability pattern failed in tension.

Design Aids for Stiffened Composite Shells with Cutouts Sarmila Sahoo, 2016-09-16 This book focuses on the free vibrations of graphite-epoxy laminated composite stiffened shells with cutout both in terms of the natural frequencies and mode shapes. The dynamic analysis of shell structures, which may have complex geometry and arbitrary loading and boundary conditions, is solved efficiently by the finite element method, even including cutouts in shells. The results may be readily used by practicing engineers dealing with stiffened composite shells with cutouts. Several shell forms viz. cylindrical shell, hypar shell, conoidal shell, spherical shell, saddle shell, hyperbolic paraboloidal shell and elliptic paraboloidal shell are considered in the book. The dynamic characteristics of stiffened composite shells with cutout are described in terms of the natural frequency and mode shapes. The size of the cutouts and their positions with respect to the shell centre are varied for different edge constraints of cross-ply and angle-ply laminated composite shells. The effects of these parametric variations on the fundamental frequencies and mode shapes are considered in detail. The information regarding the behavior of stiffened shells with cutouts for a wide spectrum of eccentricity and boundary conditions for cross ply and angle ply shells may be used as design aids for structural engineers. The book is a significant contribution to the existing literature from the point of view of both industrial importance and academic interest.

Stresses Around Rectangular Cutouts in Torsion Boxes Paul Kuhn, James P.

Peterson, 1953 A method is presented for calculating the stresses produced by rectangular cutouts of any size in torsion boxes. The problem is divided into a box problem and a cover problem. The box problem is a special case of the general method of analyzing torsion boxes without cutouts. In the cover problem, simple shear-lag theory is used to obtain key stresses; the final distributions are obtained from these key stresses by means of simple rules or empirical distribution curves. Comparisons with the results from three series of tests in which the dimensions of the cutouts varied over a wide range are shown.

Stress Analysis of Circular Semimonocoque Cylinders with Cutouts by a Perturbation Load Technique Harvey G. McComb, 1954 A method is presented for analyzing the stresses about a cutout in a circular cylinder of monocoque construction. The method involves the use of so-called perturbation solutions which are superposed on the stress distribution that would exist in the structure with no cutout in such a way as to give the effects of a cutout. The method can be used for any loading case for which the structure without the cutout can be analyzed and is sufficiently versatile to account for stringer and shear reinforcement about the cutout.

A Method for Calculating Stresses in Torsion-box Covers with Cutouts Richard Rosecrans, 1951 Stresses in the covers of torsion boxes containing large cutouts are found by changing half of the symmetrical uncut portion of the cover into three stringers carrying direct stress and intermediate cover material carrying shear stress. Illustrative examples are solved and the results are compared with experimental values. For one example, the results are compared with a more detailed numerical method of analysis. The

agreement between theory and experiment is satisfactory in all cases except those with very large cutouts and flexible bulkheads.

Interaction Between the Spars of Semimonocoque Wings with Cutouts Nicholas John Hoff, Harry Kase, Harold Liebowitz, 1947 The stresses in the two spars of a model of a wing having three rectangular cutouts were calculated by the PIBAL method, a modification of Southwell's method of systematic relaxations. The model was built and tested in the Polytechnic Institute of Brooklyn Aeronautical Laboratories and the deflections and strains measured were compared with calculated values. The agreement was found to be satisfactory.

Henri Matisse Karl D. Buchberg, Henri Matisse, Nicholas Cullinan, Jodi Hauptman, Samantha Friedman, Flavia Frigeri, Markus Gross (Conservator), Nicholas Serota, Stephan Lohrengel, 2014 Henri Matisse is one of the leading figures of modern art. His unparalleled cut-outs are among the most significant of any artist's late works. When ill health first prevented Matisse from painting, he began to cut into painted paper with scissors as his primary technique to make maquettes for a number of commissions, from books and stained glass window designs to tapestries and ceramics. Taking the form of a 'studio diary', the catalogue re-examines the cut-outs in terms of the methods and materials that Matisse used, and looks at the tensions in the works between finish and process; and drawings and colour.

The Cutouts, 2016

Andreas Eriksson: Cutouts, 2021-01-25 Painting in between abstraction and representation always offers a promise of thought and feeling. Emotionally, as well as

intellectually, it marks out new horizons. Andreas Eriksson's series Cutouts, are works with cut-out elements from discarded paintings. In Eriksson's work, cutouts are resurrected and taken seriously in their very own, specific form. Hence, something that is outside the painting shifts into focus here, showing us its asymmetrical edges and the marks of its production, and manifesting as wonderful, painterly work.

Matisse Jean Guichard-Meili, 1967

Around the World in Cut-Outs Paperboy, 2018-03-13 The world is so much more than it seems! With only paper, scissors, a camera, and his vivid imagination, globe-hopping artist Paperboy transforms real iconic landmarks and settings around the world into works of art and amusement by just holding up a cutout and snapping a photo. Here is New York's Guggenheim Museum as a flowerpot, the Eiffel Tower sporting butterfly wings, a giant octopus peeking its tentacles out of the Roman Colosseum, and nearly a hundred more images of wonder and humor. Featuring favorites from his wildly popular Instagram feed plus many never-before-seen delights, entertaining captions, behind-the-scenes, and cutouts for readers to make their own images, *Around the World in Cutouts* encourages a different and delightful view of the world around us.

Paper Cutouts Hélène Leroux-Hugon, Juliette Vicart, 2007 Contains full-size patterns for forty-five paper cutout designs, provides a historical overview of the ancient Chinese art, and includes notes on tools and techniques.

Progressive Failure Studies of Composite Panels with and Without Cutouts Navin Jaunky, 2001 Progressive failure analyses results are presented for composite panels with and without a cutout and subjected to in-plane shear loading and compression loading well into their postbuckling regime. Ply damage modes such as matrix cracking, fiber-matrix shear, and fiber failure are modeled by degrading the material properties. Results from finite element analyses are compared with experimental data. Good agreement between experimental data and numerical results are observed for most structural configurations when initial geometric imperfections are appropriately modeled.
