A School Atlas of English History Samuel Rawson Gardiner,1892

Blue Versus Purple Hal M. Friedman,2017 This book is about the war-gaming activities of the Naval War College (NWC) in the late summer and fall of 1946 in Newport, Rhode Island ... [and] how the end of World War II and the beginning of the Cold War impacted the Naval War College in terms of changing its focus from Japan to the Soviet Union as the primary enemy in the Pacific Basin.--From preface

Tank Combat in Spain Anthony J. Candil,2021-05-03
“Recounts in considerable detail how Germany, Italy, and Soviet Russia intervened in Spain, supplying troops and equipment to the warring sides.” —ARMOR Magazine Although Spain had been for many years on the periphery of the great affairs of Europe, within a few months of the Civil War breaking out in 1936, three out of the four major European powers—Italy, Germany, and the Soviet Union—decided to intervene. Spain turned out to be the perfect proving ground to carry out controlled, realistic experiments with live weapons and troops. This book covers the theories of the three main contributors that provided armor to the warring parties in the civil war, how those contributions shaped combat, and how the lessons learned were then applied to tank combat in World War II. The use of tanks in the Spanish Civil War wedded traditional

war to modern technology. The fighting in Spain did not offer any easy answers, however, to the question of infantry-armor cooperation, primarily because the tanks supplied were not very worthy and had been supplied in small numbers, even though the Republicans organized an "armored division." The situation for the tanks on the Nationalist side was so bad in practical terms that they reused captured Russian armor in their units. Tank employment in Spain did offer many lessons, but the lessons did not always lie in what was done or accomplished but precisely on what was not done and was not accomplished. "Offers important insight into the employment of tanks during the war, lessons learned (or not learned) by the participating armed forces."

The NBS Alloy Data Center: Permuted Materials Index

Institute for Materials Research (U.S.), Gesina C. Carter, 1971 This Index contains literature references to -- 10,000 research papers on physical properties of metals and alloys. The Index contains all NMR Knight shift papers and soft x-ray emission papers. It also contains many soft x-ray absorption papers and a number of papers on generally related topics such as susceptibilities, specific heats, hyperfine fields, and band structures. The papers are annotated in depth and the coded information put onto a magnetic tape. The Permuted Materials Index was created from this tape, listing alloys under each of their constituent components (i.e., CuNi appears under CuNi and under NiCu alloys).

Tanks Richard Ogorkiewicz, 2015-02-20 From an internationally acclaimed expert in the field comes a detailed, analytical and comprehensive account of the worldwide evolution of tanks, from

their inception a century ago to the present day. With new ideas stemming from the latest academic research, this study presents a reappraisal of the development of tanks and their evolution during World War I and how the surge in technological development during World War II and the subsequent Cold War drove developments in armour in Europe and America, transforming tanks into fast, resilient and powerful fighting machines. From the primitive, bizarre-looking Mark V to the Matilda and from the menacing King Tiger to the superlative M1 Abrams, Professor Ogorkiewicz shows how tanks gradually acquired the enhanced capabilities that enabled them to become what they are today – the core of combined-arms, mechanized warfare.

"Ironsides" Harold A. Skaarup, 2011-08-12 Major Hal Skaarup has woven together an informative and detailed synopsis of the carefully preserved and restored armoured fighting vehicles on display in Canada. He highlights the importance of these upon key turning points in history when these AFVs were in use as tools of war at home and overseas. We often associate the evolution of military prowess with the advancement of sophisticated technology. Major Skaarup's descriptions of Canadian armour as it evolved to the level it has today reveals that military planners have had to be continuously creative in adapting to the changes in modern combat. They had to devise many intricate techniques, tactics and procedures to overcome the insurgents and opposition forces faced in Afghanistan and future overseas missions where Canadian armour will be brought into play. This guide book will show the interested reader where to find examples of the historical armour preserved in Canada, and perhaps serve as a window on how Canada's military contribution to safety and security in the world has evolved.

Electrochemistry Mohammed Khalid, 2013-02-20

Electrochemistry has been undergoing significant transformations in the last few decades. It is now the province of academics interested only in measuring thermodynamic properties of

solutions and of industrialists using electrolysis or manufacturing batteries, with a huge gap between them. It has become clear that these, apparently distinct subjects, alongside others, have a common ground and that they have grown towards each other, particularly as a result of research into the rates of electrochemical processes. Such evolution is due to a number of factors, and offers the possibility of carrying out reproducible, dynamic experiments under an ever-increasing variety of conditions with reliable and sensitive instrumentation. This has enabled many studies of a fundamental and applied nature, to be carried out.

Italian Light Tanks Filippo Cappellano, Pier Paolo

Battistelli, 2012-06-20 The Italian army, unlike those of the British and French, did not use tanks in combat during World War I and, by November 1918, only one training unit equipped with French Schneider and Renault tanks had been formed. Consequently, during the 1920s the Italian army had just one single tank type in its armoured inventory – the Fiat 3000. Only in 1927 was the first tank unit formed as a branch of the infantry and not as an independent organization, while the cavalry rejected the idea of both tanks and armoured cars and decided to stand by the use of horses for its mounted units. Between 1933 and March 1939, a further 2,724 CV 33 / L 3 tanks were built, 1,216 of which were exported all over the world. By the time Italy entered the war in June 1940, the army had 1,284 light tanks, 855 of which were in combat units, including three armoured divisions. Variants of the CV 33 / L 3 tanks included flame-throwers, bridge-layers, recovery vehicles, and a radio command tank. Some L 3 tanks were still in use in 1945, by both the Germans and the German-allied Italian units of the Repubblica Sociale.
