Rocket McGee: Back in Trouble! Roan Reedling, 2015-06-15 Roan Reedling writes the Rocket McGee series in the suburbs of Myrtle Beach, mainly with middle-grade readers in mind, but they're sci-fi adventures that kids of any age may enjoy. You be the judge. Learn more at [Rocket McGee.com](http://RocketMcGee.com) You'd think Rocket could get a break and rest on her laurels for a bit, but no. In Book Two of the series, Rocket's secret is revealed before she's ready - before almost anyone in her whole world is ready - and though her three closest friends are behind her all the way, she's shunned by rest of the omicrons, who are shocked and just don't know how to deal with the sense of betrayal they feel, having been kept in the dark for so long by a group they've always been unconsciously suspicious of anyway. And on the heels of being battered by the broadcast of her secret, Rocket and her friends are engulfed in a whirlwind of perilous plots by enemies both new and old, and they have to rise to defend their world and the people they love even as their own world is changing around them and omicron phases out in favor of even more faraway dreams...

Emerging Space Powers Brian Harvey, Henk H. F. Smid, Theo Pirard, 2011-01-30 This work introduces the important emerging space powers of the world. Brian Harvey describes the origins of the Japanese space program, from rocket designs based on WW II German U-boats to tiny solid fuel 'pencil' rockets, which led to the launch of the first Japanese satellite in 1970. The next two chapters relate how Japan expanded its space program, developing small satellites into astronomical observatories and sending missions to the Moon, Mars, comet Halley, and asteroids. Chapter 4 describes how India's Vikram Sarabhai developed a sounding rocket program in the 1960s. The following chapter describes the expansion of the Indian space program. Chapter 6 relates how the Indian space program is looking ahead to the success of the moon probe Chandrayan, due to launch in 2008, and its first manned launching in 2014. Chapters 7, 8, and 9 demonstrate how, in Iran, communications and remote sensing drive space technology. Chapter 10 outlines Brazil's road to space, begun in the mid-1960's with the launch of the Sonda sounding rockets. The following two chapters describe Brazil's satellites and space launch systems and plans for the future. Chapters 13 and 14 study Israel's space industry. The next chapters look at the burgeoning space programs of North and South Korea. The book ends by contrasting and comparing all the space programs and speculating how they may evolve in the future. An appendix lists all launches and launch attempts to date of the emerging space powers.

The Proton Launcher Christian Lardier, Stefan Barensky, 2018-02-14 The Soviet / Russian space program was in the hands of three industrial empires: those of Serguei Korolev, the Soviet von Braun who launched Sputnik-1 and Yuri Gagarin, Vladimir Tchelomei, his main competitor, and Mikhail Yangel, Many launchers and satellites in Ukraine. In 2011, we published a first book on the history of the Soyuz launcher that was developed by Korolev and launched more than 1,800 copies. This time, we tell the story of the Proton, the main competitor of the European launcher Ariane, which was developed by Chelomei and launched more than 400 copies. Finally, the last book of the trilogy will deal with the many developments of Yangel. In the three books, the first part deals with the history of rockets in the USSR / Russia (East) and the second part on the history of their commercialization in the West.
