Communist Propaganda at School Joanna Wojdon, 2021-05-10 Communist Propaganda at School is based on an analysis of reading primers from the Soviet bloc and recreates the world as presented to the youngest schoolchildren who started their education between 1949 and 1989 across the nine Eastern European countries. The author argues that those first textbooks, from their first to last pages, were heavily laden with communist propaganda, and that they share similar concepts, techniques and even contents, even if some national specificities can be observed. This volume reconstructs the image of the world presented to schoolchildren in the first books they were required to read in their school life, and argues that the image was charged with communist propaganda. The book is based on the analysis of over sixty reading primers from nine countries of the Soviet bloc: Albania, Bulgaria, Czechoslovakia, the German Democratic Republic, Hungary, Poland, Romania, the Soviet Union and Yugoslavia from the period. Written with simplicity and straightforwardness, this book will be a valuable resource, not only to international academics dealing with the issues of propaganda, censorship, education, childhood and everyday life under communism in Eastern and Central Europe, but can also academics dealing with education under communism or with the content of primary education. It also brings educational experiences of the Soviet bloc to international researchers, in particular to researchers of education under totalitarian and authoritarian regimes.

Magnetic Core Selection for Transformers and Inductors Colonel Wm. T. McLyman, 2018-10-03 Written as a companion to Transformer and Inductor Design Handbook (second ed), this work compiles the specifications of over 12,000 industrially available cores and brings them in line with standard units of measurement, simplifying the selection of core configurations for the design of magnetic components.

A Bibliography of East European Travel Writing on Europe Wendy Bracewell, Alex Drace-Francis, 2008-02-10 The bibliography volume of the three-volume East Looks West: East European Travel Writing in Europe collates travel writing published in book form by east Europeans travelling in Europe from ca. 1550 to 2000. It is intended as a fundamental research tool, collecting together travel writings within each national/linguistic tradition, and enabling comparative analysis of such material. It fills an important gap in the existing reference literature, both in western and east European languages, and will be of use to those working in the growing fields of comparative travel writing, regional and national identities, and postcolonialism. These texts exist in surprisingly large numbers, and include writings of high literary quality as well as of historical interest, but they have been relatively little studied as a genre. Much of this material is rare and difficult to find, even in national libraries. As a result, there are few bibliographical surveys of the literature of east European travel and self-representation, and none that are region-wide or comparative in scope. This is the third volume of a three-part set of East Looks West, Vol. 1 - An Anthology of East European Travel Writing on Europe; and Vol. 2 - A Comparative Introduction to East European Travel Writing on Europe.

Report Writing for Data Science in R Roger Peng,2015-12-03 This book teaches the concepts and tools behind reporting modern data analyses in a reproducible manner. Reproducibility is the idea that data analyses should be published or made available with their data and software code so that others may verify the findings and build upon them. The need for reproducible report writing is increasing dramatically as data analyses become more complex, involving larger datasets and more sophisticated computations. Reproducibility allows for people to focus on the actual content of a data analysis, rather than on superficial details reported in a written summary. In addition, reproducibility makes an analysis more useful to others because the data and code that actually conducted the analysis are available. This book will focus on literate statistical analysis tools which allow one to publish data analyses in a single document that allows others to easily execute the same analysis to obtain the same results.

Apollo's Plague Derek Hart,2017-11-07 Every civilization has created its tales of cataclysm or apocalypse. We are perhaps the first generation, which by deliberate actions could create our own doom. It's no great stretch of the imagination that humans might disappear from the face of the earth. Still, the instinct to survive is a powerful force and there probably would be some who would indeed make it. Within hours after the

unexplained apocalypse unveiled in Minerva's Shield, lights would start going out around the country. More than 70% of power in the United States alone is generated by the burning of fossil fuels. These power plants would only continue to produce electricity as long as the fuel takes to be consumed. As discovered during the journey outlined in Nike's Chariot, if there is no one around to provide the new fuel into the generating plants, then it will be quite quick before the lights blink off everywhere.

Many-Electron Approaches in Physics, Chemistry and Mathematics Volker Bach, Luigi Delle Site, 2014-07-01 This book provides a broad description of the development and (computational) application of many-electron approaches from a multidisciplinary perspective. In the context of studying many-electron systems Computer Science, Chemistry, Mathematics and Physics are all intimately interconnected. However, beyond a handful of communities working at the interface between these disciplines, there is still a marked separation of subjects. This book seeks to offer a common platform for possible exchanges between the various fields and to introduce the reader to perspectives for potential further developments across the disciplines. The rapid advances of modern technology will inevitably require substantial improvements in the approaches currently used, which will in turn make exchanges between disciplines indispensable. In essence this book is one of the very first attempts at an interdisciplinary approach to the many-electron problem.

Microlocal Analysis, Sharp Spectral Asymptotics and Applications V Victor Ivrii, 2019-09-13 The prime goal of this monograph, which comprises a total of five

volumes, is to derive sharp spectral asymptotics for broad classes of partial differential operators using techniques from semiclassical microlocal analysis, in particular, propagation of singularities, and to subsequently use the variational estimates in “small” domains to consider domains with singularities of different kinds. In turn, the general theory (results and methods developed) is applied to the Magnetic Schrödinger operator, miscellaneous problems, and multiparticle quantum theory. In this volume the methods developed in Volumes I, II, III and IV are applied to multiparticle quantum theory (asymptotics of the ground state energy and related problems), and to miscellaneous spectral problems.

Climate Change Gary Barr, 2007 We rely on the media to give us information about climate change. But it can be difficult to know which news stories are the most accurate. That is because strong opinions exist concerning climate change, and not all scientists agree on what is causing it. This book will show how the news gets reported in different ways, and explain why some people think it is important to take radical action.

Compulsory Liability Insurance from a European Perspective Attila Fenyves, Christa Kissling, Stefan Perner, Daniel Rubin, 2016-09-26 Statutory obligations to take out liability insurance are, in practice, the most important means to ensure compensability of damage arising from dangerous activities. However, in contrast to the significant practical impact, academic research on the topic has not been extensive so far. This study, therefore, undertakes a comprehensive survey of compulsory liability insurance from nine national perspectives (Austria, Belgium, the Czech Republic, Finland, Germany, Hungary, Italy, Switzerland, and the United Kingdom) and takes constitutional

and European law (four freedoms, European Convention on Human Rights) as well as the Principles of European Insurance Contract Law (PEICL) into account. It also contains an extensive economic analysis of compulsory liability insurance and discusses aspects of insurability. A Comparative Report, Conclusions and an Annex containing a compilation of rules on compulsory liability insurance in the nine national legal systems complete the study. It considers in particular: the aims of provisions stating an obligation to take out liability insurance the mandatory content of insurance cover the protection mechanisms linked to compulsory liability insurance the control mechanisms and the sanctions imposed structural deficiencies of existing compulsory liability insurance systems

Modeling Materials Ellad B. Tadmor,Ronald E. Miller,2011-11-24 Material properties emerge from phenomena on scales ranging from Angstroms to millimeters, and only a multiscale treatment can provide a complete understanding. Materials researchers must therefore understand fundamental concepts and techniques from different fields, and these are presented in a comprehensive and integrated fashion for the first time in this book. Incorporating continuum mechanics, quantum mechanics, statistical mechanics, atomistic simulations and multiscale techniques, the book explains many of the key theoretical ideas behind multiscale modeling. Classical topics are blended with new techniques to demonstrate the connections between different fields and highlight current research trends. Example applications drawn from modern research on the thermo-mechanical properties of crystalline solids are used as a unifying focus throughout the text. Together with its companion book, Continuum Mechanics and Thermodynamics

(Cambridge University Press, 2011), this work presents the complete fundamentals of materials modeling for graduate students and researchers in physics, materials science, chemistry and engineering.

Phytochemistry of Medicinal Plants Phytochemical Society of North America. Meeting, 1995-10-31 Phytochemicals from medicinal plants are receiving ever greater attention in the scientific literature, in medicine, and in the world economy in general. For example, the global value of plant-derived pharmaceuticals will reach \$500 billion in the year 2000 in the OECD countries. In the developing countries, over-the-counter remedies and ethical phytomedicines, which are standardized toxicologically and clinically defined crude drugs, are seen as a promising low cost alternatives in primary health care. The field also has benefited greatly in recent years from the interaction of the study of traditional ethnobotanical knowledge and the application of modern phytochemical analysis and biological activity studies to medicinal plants. The papers on this topic assembled in the present volume were presented at the annual meeting of the Phytochemical Society of North America, held in Mexico City, August 15-19, 1994. This meeting location was chosen at the time of entry of Mexico into the North American Free Trade Agreement as another way to celebrate the closer ties between Mexico, the United States, and Canada. The meeting site was the historic Calinda Geneve Hotel in Mexico City, a most appropriate site to host a group of phytochemists, since it was the address of Russel Marker. Marker lived at the hotel, and his famous papers on steroidal saponins from *Dioscorea composita*, which launched the birth control pill, bear the address of the hotel.
