Albatros D.III James F. Miller,2014-03-20 In 1916 German aerial domination, once held sway by rotary-engined Fokker and Pfalz E-type wing-warping monoplanes, had been lost to the more nimble French Nieuports and British DH 2s which not only out-flew the German fighters but were present in greater numbers. Born-from-experience calls from German fighter pilots requested that, rather than compete with the maneuverability of these adversaries, new single-engine machines should be equipped with higher horsepower engines and armed with two rather than the then-standard single machine gun. The Robert Thelen-led Albatros design bureau set to work on what became the Albatros D.I and D.II and by April 1916, they had developed a sleek yet rugged machine that featured the usual Albatros semi-monocoque wooden construction and employed a 160hp Mercedes D.III engine with power enough to equip the aeroplane with two forward-firing machine guns. In all, 500 D.IIs and 840 D.III(OAW)s were produced and saw heavy service throughout 1917.

Albatros D.I-D.II James F. Miller,2013-01-20 In 1916 German aerial domination had been lost to the French and British fighters. German fighter pilots requested an aircraft that was more powerful and more heavily armed, and the Albatros design bureau set to work on what was to become an iconic aircraft design. By April 1916, they had developed the Albatros D.I, that featured the usual Albatros semi-monocoque wooden construction with a 160hp Mercedes engine and two forward-firing machine guns. Alongside the development of the D.I, Albatros had also designed and built a second machine that was similar to the D.I – the Albatros D.II. Although there were several external differences between the two aircraft, it is important to note that these machines evolved simultaneously and that the D.II was not the result of post-combat feedback from D.I pilots. With the inclusion of these aircraft into their reorganized air force, Germany was able to regain control of the skies by autumn 1916. Along with the later designs they inspired, the Albatros D.I and D.II were instrumental in allowing the Germans to prosecute their domination through 'Bloody April' and well into the summer months that followed.

DH 2 vs Albatros D I/D II James F. Miller,2012-05-20 Flown by Victoria Cross recipient Lanoe Hawker and the members of No 24 Sqn, the ungainly yet nimble DH 2 helped the Allies attain air superiority over the Somme in early 1916 and hold it through the summer. With its rotary engine 'pusher' configuration affording excellent visibility and eliminating the need for a synchronized machine gun, the DH 2 was more than a match for anything the Germans could put in the air. That is, until the arrival of the Albatros D II, a sleek inline-engined machine built for speed and with twin-gun firepower. Thus, the later part of 1916 saw an epic struggle in the skies above the Somme pitting the manoeuvrable yet under-gunned DH 2s against the less nimble yet better armed and faster Albatros D IIs. In the end the Germans would regain air superiority, three squadron commanders – two of whom were considered pinnacles of their respective air forces – would lose their lives, and an up-and-coming pilot (Manfred von Richthofen) would triumph in a legendary dogfight and attain unimagined heights fighting with tactics learned from a fallen mentor.

Joseph Smith III Roger D. Launius,1995 This interesting, well-researched biography of the founder of the Reorganized Church of Jesus Christ of Latter Day Saints covers the 54 years of his presidency, a tenure marked by Mormon factionalism that he succeeded in controlling. The son of the founder of Mormonism, Joseph Smith III at first resisted succeeding his father as leader and prophet but, as his biographer underscores, his governance from 1860 until his death in 1914 was fiercely committed to the religious legacy of his parent. Differing in style from the elder Smith's sometimes disastrous impracticality, his son exemplified rugged individualism with a

secular pragmatism that sprang from his legal education. An opponent of polygamy, as proclaimed by Brigham Young, the younger Smith established a viable bureaucracy and a style of leadership that characterizes the Mormon community today, notes the author, a military historian.

SPAD VII vs Albatros D III Jon Guttman,2011-04-19 When originally conceived, the French SPAD VII and German Albatros D II represented steps away from an emphasis on maneuver in aerial combat in favor of speed and durability - factors that came into play in hit-and-run tactics. At the end of 1916, however, Albatros tried to have the best of both worlds by incorporating the sesquiplane wing of the nimble Nieuport 17 into its D III. The result combined the better downward view and maneuverability of the Nieuport with the power and twin machine guns of the Albatros D II, but at a high price - a disturbing tendency for the single-spar lower wing to fail in a dive. While Albatros (and the Austrian Oeffag firm, which built the fighter under license) sought to alleviate that weakness with various reinforcing measures, the Germans developed tactics to maximize the D III's strengths and minimize its shortcomings. At the same time, the French worked to improve the SPAD VII with more power and a more reliable cooling system before moving on to the twin-gunned SPAD XIII. While all that was going on, the Albatros D III became a mainstay of the German and Austro-Hungarian air services in frequent encounters with SPAD VIIs flown by French, Belgian, British, Italian and American airmen.
