*The Works of Charles Darwin, Volume 23* Charles Darwin, 1990-05 Charles Robert Darwin (1809–1882) has been widely recognized since his own time as one of the most influential writers in the history of Western thought. His books were widely read by specialists and the general public, and his influence had been extended by almost continuous public debate over the past 150 years. New York University Press's new paperback edition makes it possible to review Darwin's public literary output as a whole, plus his scientific journal articles, his private notebooks, and his correspondence. This complete edition contains all of Darwin's published books, featuring definitive texts recording original pagination with Darwin's indexes retained. The set also features a general introduction and index, and introductions to each volume.

**The Correspondence of Charles Darwin: Volume 7, 1858-1859** Charles Darwin, Frederick Burkhardt, 1985 The letters in this volume cover two of the most momentous years in Darwin's life. Begun in 1856 and the fruit of twenty years of study and reflection, Darwin's manuscript on the species question was a little more than half finished, and at least two years from publication, when in June 1858 Darwin unexpectedly received a letter and a manuscript from Alfred Russel Wallace indicating that he too had independently formulated a theory of natural selection. The letters detail the various stages in the preparation of what was to become one of the

world's most famous works: Darwin's *On the Origin of Species by Means of Natural Selection*, published by John Murray in November 1859. They reveal the first impressions of Darwin's book given by his most trusted confidants, and they relate Darwin's anxious response to the early reception of his theory by friends, family members, and prominent naturalists. This volume provides the capstone to Darwin's remarkable efforts for more than two decades to solve one of nature's greatest riddles - the origin of species.

Charles Darwin's Natural Selection Charles Darwin, 1987-11-26 An original, unpublished manuscript written before the *Origin of Species* which contains the references to journal articles and books that Darwin used in formulating his controversial ideas. This volume has been edited and annotated and includes a cross-indexing to the *Origin*.

*The Cambridge Companion to Darwin* Jonathan Hodge, Gregory Radick, 2009-03-05 The naturalist and geologist Charles Darwin (1809–82) ranks as one of the most influential scientific thinkers of all time. In the nineteenth century his ideas about the history and diversity of life - including the evolutionary origin of humankind - contributed to major changes in the sciences, philosophy, social thought and religious belief. The *Cambridge Companion to Darwin* has established itself as an indispensable resource for anyone teaching or researching Darwin's theories and their historical and philosophical interpretations. Its distinguished team of contributors examines Darwin's main scientific ideas and their development; Darwin's

science in the context of its times; the influence of Darwinian thought in recent philosophical, social and religious debate; and the importance of Darwinian thought for the future of naturalist philosophy. For this second edition, coverage has been expanded to include two new chapters: on Darwin, Hume and human nature, and on Darwin's theories in the intellectual long run, from the pre-Socratics to the present.

*The Works of Charles Darwin, Volume 3* Charles Darwin, 1987-11 Charles Robert Darwin (1809–1882) has been widely recognized since his own time as one of the most influential writers in the history of Western thought. His books were widely read by specialists and the general public, and his influence had been extended by almost continuous public debate over the past 150 years. New York University Press's new paperback edition makes it possible to review Darwin's public literary output as a whole, plus his scientific journal articles, his private notebooks, and his correspondence. This complete edition contains all of Darwin's published books, featuring definitive texts recording original pagination with Darwin's indexes retained. The set also features a general introduction and index, and introductions to each volume.

**Charles Darwin** Walter Karp, 2016-11-03 Charles Darwin's theory of evolution - found in his 1859 work *The Origin of Species* - shocked Victorian scientists, who equated Darwinism with blasphemy and atheism. But the religious issue never troubled Darwin, a deeply moral man if not a profoundly religious one. He believed that evolution by natural selection was not

incompatible with belief in God, and the furor over his work shocked Darwin. Here, from the acclaimed historian Walter Karp, is the little-told story of the complex genius who decoded one of the world's greatest mysteries.

**Darwin's Demise** Joe White, Nicholas Comninellis, 2001 For people confused by the contradictory messages they hear from secular science and church teaching, evolution can be intimidating. The truth is that Darwin's ideas are based upon faulty science, and that creationists have solid evidence to support their claims. Finally, a brilliant defense of Genesis and the Bible's teaching about origins is waiting for those who are soon to understand how Darwinism is fraudulent faith masquerading as science. Authors Joe White and Nicholas Comninellis have a passion for truth, and for sharing it with students and their parents. In *Darwin's Demise*, they succeed in showing why real science is burning down the House of Darwin.

Charles Darwin Michael Ruse, 2009-04-06 The definitive work on the

philosophical nature and impact of the theories of Charles Darwin, written by a well-known authority on the history and philosophy of Darwinism. Broadly explores the theories of Charles Darwin and Darwin studies Incorporates much information about modern Biology Offers a comprehensive discussion of Darwinism and Christianity – including Creationism – by one of the leading authorities in the field Written in clear, concise, user-friendly language supplemented with quality illustrations Examines the status of evolutionary theory as a genuine theory and its implications for philosophy, epistemology and ethics Provides a strong understanding of the philosophical nature and impact of Darwin's thought Holds wide appeal for general audiences outside the world of academic philosophy Strongly supports Darwinism and fully explores modern naturalistic explanations of religion

**Origins of Darwin's Evolution** J. David Archibald, 2017-10-10 Historical biogeography—the study of the history of species through both time and place—first convinced Charles Darwin of evolution. This field was so important to Darwin's initial theories and line of thinking that he said as much in the very first paragraph of *On the Origin of Species* (1859) and later in his autobiography. His methods included collecting mammalian fossils in South America clearly related to living forms, tracing the geographical distributions of living species across South America, and sampling peculiar fauna of the geologically young Galápagos Archipelago that showed evident affinities to South American forms. Over the years, Darwin collected other

evidence in support of evolution, but his historical biogeographical arguments remained paramount, so much so that he devotes three full chapters to this topic in *On the Origin of Species*. Discussions of Darwin's landmark book too often give scant attention to this wealth of evidence, and we still do not fully appreciate its significance in Darwin's thinking. In *Origins of Darwin's Evolution*, J. David Archibald explores this lapse, showing how Darwin first came to the conclusion that, instead of various centers of creation, species had evolved in different regions throughout the world. He also shows that Darwin's other early passion—geology—proved a more elusive corroboration of evolution. *On the Origin of Species* has only one chapter dedicated to the rock and fossil record, as it then appeared too incomplete for Darwin's evidentiary standards. Carefully retracing Darwin's gathering of evidence and the evolution of his thinking, *Origins of Darwin's Evolution* achieves a new understanding of how Darwin crafted his transformative theory.

**Darwin's Plots** Gillian Beer, 2000-02-28 New edition of highly acclaimed book examining Darwin's work in a literary/cultural context.

*The Correspondence of Charles Darwin: Volume 1, 1821-1836* Charles Darwin, Frederick Burkhardt, Sydney Smith, 1985-03-07 The letters in Volume 9 provide another indispensable collection for those interested in Darwin's life, work, and world. Copyright © Libri GmbH. All rights reserved.

*Darwin Loves You* George Levine, 2008-03-30 Without minimising or sentimentalising the harsh qualities of life governed by natural selection, and without deifying Darwin, this text makes a moving case for an enchanted secularism - a commitment to the value of the natural world and the human striving to understand it.

*The Autobiography of Charles Darwin* Charles Darwin, 2012-06-25 Charles Robert Darwin, FRS (12 February 1809 – 19 April 1882) was an English naturalist. He established that all species of life have descended over time from common ancestors, and proposed the scientific theory that this branching pattern of evolution resulted from a process that he called natural selection. Darwin published his theory with compelling evidence for evolution in his 1859 book *On the Origin of Species*, overcoming scientific rejection of earlier concepts of transmutation of species. By the 1870s the scientific community and much of the general public had accepted evolution as a fact. However, many favoured competing explanations and it was not until the

emergence of the modern evolutionary synthesis from the 1930s to the 1950s that a broad consensus developed in which natural selection was the basic mechanism of evolution. In modified form, Darwin's scientific discovery is the unifying theory of the life sciences, explaining the diversity of life. - wikipedia

*An Interview with Charles Darwin* Peter J. Bowler, 2014-08-01 Charles Darwin was a nineteenth century English naturalist responsible for several advancements in evolutionary theory.

**Darwin the Writer** George Levine, 2011-06-30 Charles Darwin's *On the Origin of Species*, arguably the most important book written in English in the nineteenth century, transformed the way we looked at the world. It is usually assumed that this is because the idea of evolution was so staggeringly powerful. Prize-winning author George Levine suggests that much of its influence was due, in fact, to its artistry; to the way it was written. Alive with metaphor, vivid descriptions, twists, hesitations, personal exclamations, and humour, the prose is imbued with the sorts of tensions, ambivalences, and feelings characteristic of great literature. Although it is certainly a work of science, the *Origin* is equally a work of literature, at home in the company of celebrated Victorian novels such as *Middlemarch* and *Bleak House*, books that give us a unique yet recognisable sense of what the world is really like, while not being literally 'true'. Darwin's enormous cultural success, Levine contends, depended as much on the construction of

his argument and the nature of his language, as it did on the power of his ideas and his evidence. By challenging the dominant reading of his work, this impassioned and energetic book gives us a Darwin who is comic rather than tragic, ebullient rather than austere, and who takes delight in the wild and fluid entanglement of things.

The Life and Letters of Charles Darwin Charles Darwin, 2024-02-11 The earliest records of the family show the Darwins to have been substantial yeomen residing on the northern borders of Lincolnshire, close to Yorkshire. The name is now very unusual in England, but I believe that it is not unknown in the neighbourhood of Sheffield and in Lancashire. Down to the year 1600 we find the name spelt in a variety of ways—Derwent, Darwen, Darwynne, etc. It is possible, therefore, that the family migrated at some unknown date from Yorkshire, Cumberland, or Derbyshire, where Derwent occurs as the name of a river. The first ancestor of whom we know was one William Darwin, who lived, about the year 1500, at Marton, near Gainsborough. His great grandson, Richard Darwyn, inherited land at Marton and elsewhere, and in his will, dated 1584, bequeathed the sum of 3s. 4d. towards the setting up of the Queene's Majestie's armes over the quearie (choir) doore in the parishe church of Marton. (We owe a knowledge of these earlier members of the family to researches amongst the wills at Lincoln, made by the well-known genealogist, Colonel Chester.)
