*Future Needs in Deep Submergence Science* National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Future Needs in Deep Submergence Science, 2004-04-05 Deep-diving manned submersibles, such as Alvin, which gained worldwide fame when researchers used it to reach the wreck of the Titanic, have helped advance deep-ocean science. But many scholars in this field have noted that the number and capabilities of today's underwater vehicles no longer meet current scientific demands. At the same time, the relative value of manned and unmanned vehicles is often disputed. The report finds that new submersibles-both manned and unmanned-that are more capable than those in the current fleet are needed and would be of great value to the advancement of ocean research.

*Deep Six* David Huff, 2020-12-15 As the submarine moved through the water, at the speed of 50 knots, the mid-Atlantic ridge was the only reference point it needed to use based on the maps and charts borrowed from the U.S. Navy. The 10 man crew operated the Deep Submergence Vehicle (DSV) with precision as it made its way down through the darkness of the ocean, its front lights illuminating the way as it went deeper into the trench. The DSV's objective was to find the remains of the USS Dolphin, a nuclear Fast Attack submarine that disappeared in or around this area about a month ago. The USS Dolphin was one of three Sea Wolf class submarines in the Navy inventory with the capability to carry Tomahawk missiles and MK-48 torpedoes. Once again the adventure begins for a whole new set of people, when they start searching for the answers that will bring peace to the families of the sailors who lost their lives aboard the USS Dolphin. It was up to Tony and Chance and others to find the clues that would save other men and women as well.

**Undersea Vehicles and National Needs** National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Undersea Vehicles and National Needs, 1996-11-19 The United States faces decisions requiring information about the oceans in vastly expanded scales of time and space and from oceanic sectors not accessible with the suite of tools now used by scientists and engineers. Advances in guidance and control, communications, sensors, and other technologies for undersea vehicles can provide an opportunity to understand the oceans' influence on the energy and chemical balance that sustains humankind and to manage and deliver resources from and beneath the sea. This book assesses the state of undersea vehicle technology and opportunities for vehicle applications in science and industry. It provides guidance about vehicle subsystem development priorities and describes how national research can be focused most effectively.

*A Concept of Operations for a New Deep-diving Submarine* F. W. LaCroix, Rand Corporation, 2002 By 2012, the reactor on the U.S. Navy's only deep-diving research submarine will be exhausted, making it necessary to either refuel the reactor or replace the submarine. If the Navy opts for a new submarine, what capabilities should it retain and what capabilities should be added? What would be its most important missions and what would be required for it to perform those missions? In this report, the authors worked with panels of qualified scientists, defense experts, and naval officers to develop a concept of operation for a possible replacement platform, analyzing which military and scientific missions should have the highest priorities. The authors conclude by offering a list of the highest-priority missions and two design concepts that would best be able to achieve them.

**Encyclopedia of Ocean Engineering** Weicheng Cui, Shixiao Fu, Zhiqiang Hu, 2022-06-29 This encyclopedia adopts a wider definition for the concept of ocean engineering. Specifically, it includes (1) offshore engineering: fixed and floating offshore oil and gas platforms; pipelines and risers; cables and moorings; buoy technology; foundation engineering; ocean mining; marine and offshore renewable energy; aquaculture engineering; and subsea engineering; (2) naval architecture: ship and special marine vehicle design; intact and damaged stability; technology for energy efficiency and green shipping; ship production technology; decommissioning and recycling; (3) polar and Arctic Engineering: ice mechanics; ice-structure interaction; polar operations; polar design; environmental protection; (4) underwater technologies: AUV/ROV design; AUV/ROV hydrodynamics; maneuvering and control; and underwater-specific communicating and sensing systems for AUV/ROVs. It summarizes the A-Z of the background and application knowledge of ocean engineering for use by ocean scientists and ocean engineers as well as nonspecialists such as engineers and scientists from all disciplines, economists, students, and politicians. Ocean engineering theories, ocean devices and equipment, ocean design and operation technologies are described by international experts, many from industry and each entry offers an introduction and references for further study, making current technology and operating practices available for future generations to learn from. The book also furthers our understanding of the current state of the art, leading to new and more efficient technologies with breakthroughs from new theory and materials. As the land resources approach the exploitation limit, ocean resources are becoming the next choice for the sustainable development. As such, ocean engineering is vital in the 21st century.

**A Concept of Operations for a New Deep-Diving Submarine** , 2001 The NR-1 is the Navy's only nuclear deep-diving research submarine capable of scientific and military missions. Its nuclear reactor will be exhausted in 2012; therefore, the NR-1 must be refueled or retired before then. As part of its considerations in this regard, the Navy is developing a concept of operations (CONOP) for a possible replacement platform, initially designated the NR-2. The study summarized here was designed to provide insight into the capabilities that an NR-2 platform or system might

incorporate and help define operational capability requirements based on a prioritization of those capabilities and the missions they would support. We neither discuss potential alternatives to an NR-2 nor analyze the costs associated with the platform. The results of this study will inform a future Navy analysis of alternatives, including a cost-benefit assessment.
