Future Needs in Deep Submergence Science National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Future Needs in Deep Submergence Science, 2004-04-05 Deep-diving manned submersibles, such as Alvin, which gained worldwide fame when researchers used it to reach the wreck of the Titanic, have helped advance deep-ocean science. But many scholars in this field have noted that the number and capabilities of today's underwater vehicles no longer meet current scientific demands. At the same time, the relative value of manned and unmanned vehicles is often disputed. The report finds that new submersibles—both manned and unmanned—that are more capable than those in the current fleet are needed and would be of great value to the advancement of ocean research.

Submarines & Deep-sea Vehicles J. J. Tall, 2002 The submarine has progressed from the crude, steam-driven craft of the American Civil War to silent nuclear machines that can cruise for months underwater without surfacing. Submarines & Deep-Sea Vehicles traces the history of these vessels, starting with the earliest submersible craft, right up to the stealthy nuclear giants of the modern age. Ranging from the military stealth submarines of the Cold War, to biological research vessels, to the latest remotely operated machines, Submarines & Deep-Sea Vehicles is a stunningly illustrated guide to the exploration of our greatest frontier -- the fascinating world under the ocean.

Undersea Vehicles and National Needs National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Undersea Vehicles and National Needs, 1996-12-19 The United States faces decisions requiring information about the oceans in vastly expanded scales of time and space and from oceanic sectors not accessible with the suite of tools now used by scientists and engineers. Advances in guidance and control, communications, sensors, and other technologies for undersea vehicles can provide an opportunity to understand the oceans' influence on the energy and chemical balance that sustains humankind and to manage and deliver resources from and beneath the sea. This book assesses the state of undersea vehicle technology and opportunities for vehicle applications in science and industry. It provides guidance about vehicle subsystem development priorities and describes how national research can be focused most effectively.

Undersea Studies with the Deep Research Vehicle STAR III. Joseph Pollio, NAVAL OCEANOGRAPHIC OFFICE NSTL STATION MS., 1968 The manned submersible STAR III was used to conduct a series of 21 dives off Key West, Florida in March 1967. The purpose of the operation was to evaluate the STAR III system as a platform from which to conduct underwater photogrammetric and various surveying tasks. (Author).

Disability from a Humanistic Perspective Shunit Raiter, Ronald O'Rourke, 2008 The Integrated Deepwater Systems (IDS) program, or Deepwater program for short, is a \$24-billion, 25-year project to replace and modernise the Coast Guard's ageing fleet of deepwater-capable ships and aircraft. It is the largest and most complex acquisition effort in Coast Guard history, encompassing 91 new cutters, 124 new small surface craft, and 244 new or converted aeroplanes, helicopters, and unmanned aerial

vehicles (UAVs). The Deepwater program has received a total of about \$4.4 billion through FY2007, including about \$1.14 billion in FY2007. For FY2008, the Coast Guard requested \$836.9 million in new appropriations and the rescission of \$48.8 million in prior-year appropriations for the program, for a net total request of \$788.1 million. This new book presents an in-depth analysis of the program and its significance.

[Ships from the Depths](#) Fredrik Søreide, 2011-04-28 Deepwater archaeology uncovers secrets from the ancient maritime past . . . Thousands of shipwrecks and archaeological sites lie undiscovered in deep water, potentially holding important clues to our maritime past. Scientists have explored only a small percentage of the oceans' depths, as 98 percent of the seabed lies well beyond the reach of conventional diving. [Ships from the Depths](#) surveys the dramatic advances in technology over the last few years that have made it possible for scientists to locate, study, and catalogue archaeological sites in waters previously inaccessible to humans. Researcher and explorer Fredrik Søreide presents the development of deepwater archaeology since 1971, when Willard Bascom designed his Alcoa Seaprobe to locate and raise deepwater wrecks in the Mediterranean. Accompanied by descriptions and color photographs of deepwater projects and equipment, this book considers not only techniques that have been developed for location and observation of sites but also removal and excavation methods distinctive to these unique locations, far beyond the reach of scuba gear. Søreide provides an introduction to and survey of the history, development, and potential of this exciting branch of nautical archaeology. Scholars and field archaeologists will appreciate this handy compendium of the current state of the discipline and technology, and general readers will relish this comprehensive look at the challenges and opportunities associated with locating and studying historical and ancient shipwrecks in some of the world's deepest waters.

Technology and Applications of Autonomous Underwater Vehicles Gwyn Griffiths, 2002-11-28 The oceans are a hostile environment, and gathering information on deep-sea life and the seabed is incredibly difficult. Trace Metal Biogeochemistry and Ecology of Deep-Sea Hydrothermal Vent Systems Liudmila L. Demina, Sergey V. Galkin, 2016-07-26 This volume synthesizes the relevant data that is fundamental to our understanding of trace metal biogeochemistry and the ecology of biological communities of deep-sea vent systems. It presents the combined results of biological and geochemical research and analyzes the microdistribution of animals and the spatial structure of vent communities. Careful consideration is given to the export of iron and other trace metals from hydrothermal vents. The environmental conditions to be found in deep-sea hydrothermal community habitats, along with the trace metal behavior in biotope water are characterized and the sources and forms of trace metals taken up by dominant hydrothermal vent animals are discussed. Special attention is paid to the poorly investigated deep biosphere of the sub-seafloor igneous crust. The book is illustrated with a wealth of exceptional deep-sea photos taken by the manned submersible "Mir", and a dedicated chapter focuses on the role of deep manned submersibles in ocean research. The book will be of interest to researchers and students in the fields of oceanography, geochemistry, biology, the environmental sciences and marine ecology.
