Deep Impact Delta II Launch Vehicle Cracked Thick Film Coating on Electronic Packages Technical Consultation Report National Aeronautics and Space Administration (NASA),2018-05-20 The Deep Impact spacecraft was launched on a Boeing Delta II rocket from Cape Canaveral Air Force Station (CCAFS) on January 12, 2005. Prior to the launch, the Director of the Office of Safety and Mission Assurance (OS&MA) requested the NASA Engineering and Safety Center (NESC) lead a team to render an independent opinion on the rationale for flight and the risk code assignments for the hazard of cracked Thick Film Assemblies (TFAs) in the E-packages of the Delta II launch vehicle for the Deep Impact Mission. The results of the evaluation are contained in this report. Cameron, Kenneth D. and Kichak, Robert A. and Piascik, Robert S. and Leidecker, Henning W. and Wilson, Timmy R. Examination of Suspected Delta II Second-Stage Reentry Debris ,2001 A piece of suspected reentry debris was submitted to the Materials Science Department for analysis to determine whether its composition was consistent with its supposed source. The debris consisted of a black-colored woven fabric that locally had clear fused-looking areas, with entrapped bubbles, and small metallic deposits. The time and location of the recovered debris correspond with the reentry of a Delta II second stage. The second-stage fuel tank, thrust chamber, and a pressure vessel impacted at several locations in Texas, and trajectory analysis, allowing for the prevailing winds, shows that the recovered debris is probably from the reentry event. The chemical composition of the fibers (calcium alumino silicate) and appearance of the piece of debris is consistent with it being from the outer

woven E-glass fabric from the Delta second-stage thrust chamber. The metallic deposits on the fabric are believed to be residue from the aluminum flange. E-glass has a 'softening' point of about 850 deg C and a 'melting' point of approximately 1200 deg C. The large number of bubbles trapped in the fused glass is also consistent with the orbital reentry scenario and assumes the material was relatively fluid and had reached a temperature above the melting point of E-glass.

NASA Cristina T. Chaplain, 2011-04 NASA has long relied on the Delta II medium class launch vehicle (MCLV) to launch science missions. Delta II, however, is no longer in production, and no other vehicle in the relative cost and performance range is currently certified for NASA use. This report assessed: (1) NASA's and the contractor's steps to ensure resources are available to support safe Delta II oper. through 2011; (2) NASA's plans and contingencies for ensuring a smooth transition from current small and MCLV to other launch vehicles; (3) the risks associated with NASA's planned approach to fill the MCLV capability gap; and (4) technical and programmatic implications if NASA commits to new launch vehicles before they are certified and proven. Space Systems Failures David M. Harland,Ralph Lorenz,2007-09-14 The very first book on space systems failures written from an engineering perspective. Focuses on the causes of the failures and discusses how the engineering knowledge base has been enhanced by the lessons learned. Discusses non-fatal anomalies which do not affect the ultimate success of a mission, but which are failures nevertheless. Describes engineering aspects of the spacecraft, making this a valuable complementary reference work to conventional engineering texts.

Crosby, International Space University e-mail: norma@bock-crosby.fsbusines.co.uk For the sixth annual ISU Symposium the theme was Smaller Satellites: Bigger Business? Concepts, Applications and Markets for Micro/Nanosatellites in a New Information World. Thus, the Symposium addressed the crucial question: are small satellites the saviour of space programmes around the world It did this from the unique perspective of the International Space today? University - the interdisciplinary, international and intercultural perspective. This Symposium brought together a variety of people working on small satellites - engineers, scientists, planners, providers, operators, policy makers and business executives, together with representatives from regulatory bodies, from national and international organizations, and from the finance sector, and also entrepreneurs. Discussion and debate were encouraged, based on the papers presented and those

Delta 2 Explosion Plume Analysis Report National Aeronautics and Space Administration (NASA),2018-06-13 A Delta II rocket exploded seconds after liftoff from Cape Canaveral Air Force Station (CCAFS) on 17 January 1997. The cloud produced by the explosion provided an opportunity to evaluate the models which are used to track potentially toxic dispersing plumes and clouds at CCAFS. The primary goal of this project was to conduct a case study of the dispersing cloud and the models used to predict the dispersion resulting from the explosion. The case study was conducted by comparing mesoscale and dispersion model results with available meteorological and plume observations. This study was funded by KSC under Applied Meteorology Unit (AMU) option hours. The models used in the study are part of the Eastern Range Dispersion Assessment System (ERDAS) and include the Regional Atmospheric Modeling System (RAMS), HYbrid Particle And Concentration Transport (HYPACT), and Rocket Exhaust Effluent Dispersion Model (REEDM). The primary observations used for explosion cloud verification of the study were from the National Weather Service's Weather Surveillance Radar 1988-Doppler (WSR-88D). Radar reflectivity measurements of the resulting cloud provided good estimates of the location and dimensions of the cloud over a four-hour period after the explosion. The results indicated that RAMS and HYPACT models performed reasonably well. Future upgrades to ERDAS are recommended. Evans, Randolph J. Kennedy Space Center NAS10-96018

Earth Science and Applications from Space National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Assessment of NASA's Earth Science Program, 2012-09-03 Understanding the effects of natural and human-induced changes on the global environment and their implications requires a foundation of integrated observations of land, sea, air and space, on which to build credible information products, forecast models, and other tools for making informed decisions. The 2007 National Research Council report on decadal survey called for a renewal of the national commitment to a program of Earth observations in which attention to securing practical benefits for humankind plays an equal role with the quest to acquire new knowledge about the Earth system. NASA responded favorably and aggressively to this survey, embracing its overall recommendations for Earth observations, missions, technology investments, and priorities for the underlying science. As a result, the science and applications communities have made significant progress over the past 5 years. However, the Committee on Assessment of NASA's Earth Science Program found that the survey vision is being realized at a far slower pace than was recommended, principally because the required budget was not achieved. Exacerbating the budget shortfalls, NASA Earth science programs experienced launch failures and delays and the cost of implementing missions increased substantially as a result of changes in mission scope, increases in launch vehicle costs and/or the lack of availability of a medium-class launch vehicle, under-estimation of costs by the decadal survey, and unfunded programmatic changes that were required by Congress and the Office of Management and Budget. In addition, the National Oceanic and Atmospheric Administration (NOAA) has made significant reductions in scope to its future Earth environmental observing satellites as it contends with budget shortfalls. *Earth Science and Applications from Space: A Midterm Assessment of*

NASA's Implementation of the Decadal Survey recommends a number of steps to better manage existing programs and to implement future programs that will be recommended by the next decadal survey. The report also highlights the urgent need for the Executive Branch to develop and implement an overarching multiagency national strategy for Earth observations from space, a key recommendation of the 2007 decadal survey that remains unfulfilled.
