Dornier Wal. «A Light Coming Over the Sea» Michiel Van der Mey,2012

Dornier Wal Maarten Michiel Mey,2005 Wal var vel mellemkrigstidens bedste flyvebåd, især målt på rækkevidde og driftsstabilitet. Her berettes om udviklingen af de forskellige typer, ruter og Dorniers kommercielle succes.

Dornier Do 335 Robert Forsyth,2018-10-18 The Dornier Do 335 was conceived as a high-speed, all-weather fighter, and represented the pinnacle of piston-engined aircraft design. The Do 335 was a big aircraft, weighing just over 10,000kg when laden with fuel, equipment, and pilot, yet powered by two Daimler-Benz DB 603 engines, it was capable of reaching a maximum speed of 750km/h at 6400 meters, making it the fastest piston engine aircraft produced in Germany during World War II. Some forty aircraft were built between late 1943 and the end of the war, and it was intended to deploy the type as a day fighter, bomber, night fighter, bad weather interceptor, and reconnaissance aircraft, all of which were intended to incorporate the latest armament, bomb sights, communications, and radar equipment, as well as an ejector seat. Featuring archive photography and specially commissioned artwork, this is the full story of the aircraft that the Luftwaffe hoped would turn the tide of the war.

Dornier Do 24 Units Peter de Jong,2015-07-20 Perhaps the most seaworthy flying boat ever built, the elegant, tri-motor Dornier Do 24 served with both the Allied and Axis forces in very different parts of the globe during World War 2, garnering an excellent reputation along the way This study uses archival records, first-hand accounts and revealing photographs to illuminate the combat career of this remarkable aircraft for the first time in English. The German-built Do 24 was the Netherlands Navy's principal aerial asset during the Japanese invasion of the East Indies. While the survivors of that ordeal served in the Australian Air force, in occupied Holland and France production continued apace and the Do 24 equipped the German Air-Sea rescue service, whose crews loved and respected the machine. The type witnessed the rise and fall of the Luftwaffe over all the European seas, took part in the desperate evacuations of Wehrmacht troops on the Baltic in the face of the overwhelming Soviet advance, and was pressed out of service only with the withdrawal of Spanish Do 24s in 1969. This volume tells the long and eventful story of the faithful Do 24 in full.

Dornier Do 335 "Pfeil" Heinz J. Nowarra,1989 This late WWII aircraft was the fastest piston engine fighter of the war.

Dornier Do X Volker A. Behr,2013 Though only three were produced in late-1920s/early-1930s Germany, the Dornier Do X was the largest flying boat of its time and flew passengers on international flights in extreme comfort during the pre-World War II years. Powered by twelve engines, the aircraft could accommodate over 100 passengers and crew and included sleeping and dining areas. This detailed and highly illustrated book covers the design, development and construction of the Do X, then explores its initial testing and short but historic use as an international airliner, and lastly discusses the ultimate fate of all three examples. The superb collection of photographs includes rare images of the Do X's construction, flights, crew, and luxurious fittings - including many of its interior features, furniture, vintage ephemera and place settings.

Dornier Do 335 Pfeil/Arrow Eddie J. Creek,J. Smith,2017-08-05 Often described as brutal yet innovative in design, the massive 'push-pull' Dornier Do 335 all-weather heavy fighter was symbolic of late war German aircraft design--an extraordinary aircraft which could have been deadly in combat but ultimately arrived too late to prove itself. Maybe because of its unrealized potential, the '335' has held a special fascination for aviation enthusiasts, historians and modelers ever since its existence became public knowledge. The authors have now fully revised, updated and significantly expanded their work (by approximately 80 pages) incorporating, in particular, over 150 additional rare photographs, diagrams and new material about the development, construction and flying of the '335' and the little-known projects and concepts it spawned. Backed up by superb color profile artwork and detailed line drawings, this book represents the finest research on this enigmatic aircraft.

Dornier Do 335 J. Richard Smith,Eddie J. Creek,Gerhard Roletschek,2006 The massive 'push-pull' Do 335 all-weather heavy fighter was capable of a

maximum speed in excess of 750km/h at 6400m. In marked contrast to the many other futuristic designs produced in the dying days of the Reich, some forty examples were built and several were flown. The authors have unearthed much previously unpublished material and dispel many myths about the aircraft. This title is not yet published. Dornier Do 17/Do 215 Marek Murawski, 2015 The monograph on the WW2 German bombers Dornier Do 17 and Dornier Do 215 discusses their design, development and operational history. Each variant is specified and comprehensively described with coverage of changes made in its sub-variants, including the special modifications for the foreign recipients. Designed and built in the late 1930s, originally as reconnaissance and bomber plane, the Do 17/215 was also used as a night fighter equipped with radar systems. A large part of the book is devoted to the combat use of the aircraft in the Spanish Civil War, Poland, the Balkans and Russia together with the Western Campaign and Battle of Britain. A short account of the night fighting missions is also included.

The Flying Pencil Heinz J. Nowarra, 1990 Versatile German medium bomber also used as recon and assault.

Flying Boats & Seaplanes Stéphane Nicolaou, 1998 Beginning with races that were staged at elegant French resorts in the early part of the century, flying boats and seaplanes have played an integral part in aviation history. World War I spurred the development of these machines, and by the 1930s, flying boats and seaplanes had become pioneers in transcontinental flight. This photo-filled history recalls the role of flying boats and seaplanes in civil and military aviation history, and the enthusiasm of the engineers and pilots who are associated with their development. In addition to the golden years of hydraviation prior to World War II, author Nicolaou examines the decline of the seaplane, and its subsequent renaissance in nations that are today considered seaplane paradises. The saga is illustrated by more than 200 rare photographs uncovered in archives around the globe.

Against Hitler's Luftwaffe in the Balkans Djordje I Nikolić, Ognjan M Petrović, 2023-11-30 Immediately following the end of the First World War, the air force of the newly-formed Southern Slav State, the Kingdom of Serbs, Croats and Slovenes, was forced to rely mainly on war-time Serbian Air Service aircraft and material left after the withdrawal of the French Armée de l'Air from the Balkans in 1919/1920. This equipment was supported by the addition of French war surplus stocks which started arriving in 1921. In 1929 the monarchy changed its name to the Kingdom of Yugoslavia. Then, from 1930, the official name of the air service branch its military was changed to what is commonly known in the West as the Royal Yugoslav Air Force (RYAF). The obsolete First World War aircraft were replaced from 1925 onwards by stop-gap solutions purchased mainly from France, some from the Czechoslovakian Republic as well as from the first domestic factories. From 1936, the RYAF again began to reorganize and modernize, with the purchase of the most modern aircraft available at that time. These aircraft were imported from the UK, Germany and Italy, some being built under license in domestic factories. During this period the Kingdom of Yugoslavia succeeded, as much as conditions allowed, to equip its air force with the most advanced fighter and bomber types of the period. For the Kingdom of Yugoslavia, the Second World War started on 6 April 1941. The military coup d'état of 27 March 1941 and anti-German demonstrations in Belgrade clearly aligned the kingdom with the Allies. That same day, Hitler ordered the implementation of Unternehmen 25 (Operation 25) – the attack against Kingdom of Yugoslavia. Hitler had also secured Mussolini's support for this campaign, while Hungary, Romania and Bulgaria gave active or passive backing in exchange for territorial claims in Yugoslavia. Despite all the odds,

the airmen of the RYAF fought gallantly in the defense of their homeland, with fighters taking on the German and Italian bombers and their escort fighters – including the Axis types in service with the RYAF. Eventually, due to the deteriorating situation on the front and the ever-increasing risk of the king and his government being captured, the decision was taken to evacuate by air to Greece. In the summer of the 1941 some 220 Yugoslav aviators gathered in Egypt and continued the fight against Axis, this time in the colors of the RAF. This is the full story of their service and combats in the early months of that year.

The Aviation History Relly Victoria Petrescu, Florian Ion Petrescu, 2013-02 According to Aulus Gellius, Archytas, the Ancient Greek philosopher, mathematician, astronomer, statesman, and strategist, was reputed to have designed and built, around 400 BC, the first artificial, self-propelled flying device, a bird-shaped model propelled by a jet of what was probably steam, said to have actually flown some 200 metres. This machine, which its inventor called The Pigeon, may have been suspended on a wire or pivot for its flight. The 9th century Muslim Berber inventor, Abbas Ibn Firnas's glider is considered by John Harding to be the first attempt at heavier-than-air flight in aviation history. In 1010 AD an English monk, Eilmer of Malmesbury purportedly piloted a primitive gliding craft from the tower of Malmesbury Abbey. Eilmer was said to have flown over 200 yards (180 m) before landing, breaking both his legs. He later remarked that the only reason he did not fly further was because he forgot to give it a tail, and he was about to add one when his concerned Abbot forbade him any further experiments. Bartolomeu de Gusmão, Brazil and Portugal, an experimenter with early airship designs. In 1709 demonstrated a small airship model before the Portuguese court, but never succeeded with a full-scale model. Pilâtre de Rozier, Paris, France, first trip by a human in a free-flying balloon (the Montgolfière), built by Joseph-Michel and Jacques-Étienne Montgolfier, . 9 km covered in 25 minutes on October 15, 1783. (see Le Globe below for first unmanned flight, 2 months earlier) Professor Jacques Charles and Les Frères Robert, two French brothers, Anne-Jean and Nicolas-Louis, variously shared three milestones of pioneering flight: Le Globe, the first unmanned hydrogen gas balloon flew on 26 August 1783. On 1 December 1783 La Charlière piloted by Jacques Charles and Nicolas-Louis Robert made the first manned hydrogen balloon flight. In 1951, the Lockheed XFV-1 and the Convair XFY tailsitters were both designed around the Allison YT40 turboprop engine drivin

The World's Most Powerful Civilian Aircraft Paul E. Eden, 2016-12-15 The World's Most Powerful Civilian Aircraft profiles many types, from cargo transports and freighters, through flying boats, passenger airliners, and business jets. Featured aircraft include the Ford Trimotor “Tin Goose,” one of the great workhorses of early aviation history; the supersonic Tupolev Tu-144 “Charger” and Concorde, Cold War competitors in aviation excellence; and the most popular passenger aircraft of the present, including the Boeing 747 and Airbus A380. Each entry includes a brief description of the model’s development and history, a profile view, key features, and specifications. Packed with more than 200 artworks and photographs, this is a colorful guide for the aviation enthusiast.

History of Air Cargo and Airmail from the 18th Century Camille Allaz, 2005-03 It was first published in French by the Institut du Transport Aerien in 1998 and received very favourable reviews. Through the publication of the English language edition, this remarkable work is now accessible to many more readers around the world. In addition, the author has expanded the book with new sections and he has extensively updated it to bring the story of air cargo into the twenty first century, concluding with a look into the future. The author, Camille Allaz, served as Senior Vice President Cargo at Air France for 10 years which gave him an insider's close-up view of his subject, a privilege not enjoyed by many historians. There is no aspect of mail or cargo transport by air that has not been thoroughly researched and documented by Allaz, from the first brief transport of animals by balloon in France in 1783 to the vast global networks of the integrated express carriers in the 21st century. As a true scholar, he fits his narrative into the larger framework of political, military, economic and aviation history. This book should stand for years as the definitive work on the history of air cargo

and airmail, and will be of immense value to the academic community, to the air cargo industry, the postal services, and to the general public.
