French Cruisers, 1922-1956 Jean Moulin,John

Jordan,2013-03-04 A technical analysis and pictorial history of the French navy cruisers built in the early to mid-twentieth century. The French produced some of the most striking and innovatory interwar cruiser designs. A large amount of new information about these ships has become available over the past twenty years in France, but this book is the first to make this accessible to an English-speaking readership. Part I explains the design philosophy behind each of the classes built after 1922, and outlines the characteristics of each type, accompanied by detailed data tables and a comprehensive set of specially-drawn plans based on official documents, as well as carefully-selected photographs. Coverage includes the De Grasse, laid down in August 1939 and completed postwar as an AA cruiser, and also the heavy cruisers of the Saint Louis class intended to follow her, about which little has been published. Part II deals with the historical side, covering not only the eventful careers of these ships, but also explaining the peacetime organization of the Marine Nationale, the complex politics of this turbulent period and their impact on the navy. Like its highly successful predecessor, French Battleships, this beautifully presented book subtly blends technical and historical analysis to produce what must become the standard reference work. Praise for French Cruisers "A clearly-written and excellently presented book which, particularly with respect to its technical descriptions, explains its chosen subject area in a convincing and comprehensive fashion. The authors are to be commended for their achievement in bringing knowledge of a previously sparsely-covered subject to an English language readership." —Warship Annual 2014

The British Navy Earl Thomas Brassey Brassey,1882

The British Navy Thomas Brassey,2010-12-16 This comprehensive survey of the British Navy at a time of

technological development was published between 1882 and 1883.

Catapult Aircraft Leo Marriott,2006-09-21 During World War I, the navies of the opposing forces discovered the value of aerial reconnaissance and many experiments were made to allow larger warships to carry one or sometimes two aircraft aboard. In the early days these were float planes that were lowered by crane into the sea and then lifted back aboard upon their return. This was a lengthy affair and when a speedy departure was necessary, time was of the essence. A new system was devised so that a powerful catapult system and a short ramp could, with the added speed of the ship, get an aircraft airborne in a fraction of the time previously required. Thus was born a highly specialised type of aircraft. This book includes all the major designs that went to war in the First and Second World Wars and includes aircraft used by all the combatants. It looks at how the aircraft evolved and how the warships were modified to accommodate the aircraft and the catapult system. The use of these fixed-wing aircraft was abandoned when the invention of the helicopter was made in the early post WW II years.

The Organization and Order of Battle of Militaries in World War II Charles D. Pettibone,2010-12 Book contains: 1. All branches of country's military; 2. Their structure and organization; 3. Order of Battle; can follow officers through their commands; 4. Unit/ship insignia or design.

Naval Firepower Norman Friedman,2013-08-20 For more than half a century the big gun was the arbiter of naval power, but it was useless if it could not hit the target fast and hard enough to prevent the enemy doing the same. Because the naval gun platform was itself in motion, finding a 'firing solution' was a significant problem made all the more difficult when gun sizes increased and fighting ranges lengthened and seemingly minor issues like wind velocity had to be factored in. To speed up the process and eliminate human error, navies sought a reliable

mechanical calculation. This heavily illustrated book outlines for the first time in layman's terms the complex subject of fire-control, as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era. Covering the directors, range-finders, and electro-mechanical computers invented to solve the problems, America's leading naval analyst explains not only how the technology shaped (and was shaped by) the tactics involved, but analyses their effectiveness in battle. His examination of the controversy surrounding Jutland and the relative merits of competing fire-control systems draws conclusions that will surprise many readers. He also reassesses many other major gun actions, such as the battles between the Royal Navy and the Bismarck and the US Navy actions in the Solomons and at Surigao Strait. All major navies are covered, and the story concludes at the end of World War II with the impact of radar. This is a book that everyone with a more than passing interest in twentieth-century warships will want to read, and nobody professionally involved with naval history can afford to miss.

Encyclopedia of Military Technology and Innovation

Stephen Bull, 2004-06-30 From the Abrams M1 tank to the zeppelin, this essential reference details the invention and evolution of nearly 600 of the most important advances in military technology from prehistory to the present. International in scope, it covers weapons, ammunition, defenses, land vehicles, aircraft, ships, detection, stealth, gear, supplies, weapons of mass destruction, and much more. Whether researching such cutting-edge technologies as the B-2 Stealth Bomber, Patriot Missile, and the Roborat project or such historical topics as forts, Molotov cocktails, or the U-2, Encyclopedia of Military Technology and Innovation is a must-have reference. Warfare and national defense have provided a strong stimulus for technological advances throughout history. This reference provides students and researchers from high school through college, scholars, and the

general public essential information, historical perspective, and scientific context to understand better the development, capabilities, and uses of major military technologies. Fifty illustrations, helpful cross-references, a bibliography, and an index help users navigate this reference and supplement their research.

French Warships in the Age of Steam 1859–1914 Stephen S. Roberts, 2021-10-31 “This outstanding book will be essential for future studies of naval policy in the period between la Gloire and the Great War.” —The Naval Review This book is the first comprehensive listing in English of more than 1400 warships that were added to the official French navy fleet list between 1 January 1859 and World War I. It includes everything from the largest battleships to a small armoured gunboat that looked like a floating egg. Reflecting the main phases of naval policy, the ships are listed in three separate parts to keep contemporary designs together and then by ship type and class. For each class the book provides a design history explaining why the ships were built, substantial technical characteristics for the ships as completed and after major reconstructions, and selected career milestones including the ultimate fate of each ship. Following the earlier volumes written jointly with Rif Winfield, *French Warships in the Age of Sail 1626–1786* and *French Warships in the Age of Sail 1786–1861*, this trilogy now provides a complete picture of the development of French warships over a period of almost three centuries. “As a technical reference on the French ships of 1859 to 1914, this book is a must for the serious naval architecture student, modeler, or enthusiast. So much solid information is packed in this book, arranged logically, clearly and with so many illustrations, I cannot see where another volume on this subject can compete. Highly recommended!” —Nautical Research Journal “Superlatives abound in describing this book, arguably the finest naval ‘ship list’ ever created.” —Warship International

The Modern Cruiser Robert C. Stern, 2020-03-30 “An entertaining and informative review of the evolution of one of the

most important classes of warship, from the technology of WWII into the missile age.” —Firetrench Cruisers probably vary more in their characteristics than any other warship type and have certainly been subject to the most convoluted development. There was always a basic tension between quantity and quality, between numbers and unit size, but at a more detailed level every one of the naval powers made different demands of their cruiser designers. This makes the story of cruiser evolution in the world’s major navies fascinating but complex. This book sets out to provide a coherent history of the fortunes of this ship-type in the twentieth century, beginning with a brief summary of development before the First World War and an account of a few notable cruiser actions during that conflict that helped define what cruisers would look like in the post-war world. The core of the book is devoted to the impact of the naval disarmament treaty process, which concentrated to a great extent on attempting to define limits to the numbers and size of cruisers that could be built, in the process creating the “treaty cruiser” as a type that had never existed before and that existed solely because of the treaty process. How the cruisers of the treaty era performed in the Second World War forms the final focus of this “interesting, well-written, and well-grounded” book, which concludes with a look at the fate of the cruiser-type since 1945 (Warship International). The result is probably the best single-volume account of the subject to date.

Brassey's Naval Annual, 1935

Italian Heavy Cruisers Maurizio Brescia, Augusto de Toro, 2022-12-31 When the Washington Naval Treaty of 1922 effectively banned the building of battleships, competition between the major navies concentrated on the next most powerful category, heavy cruisers limited to 10,000 tons displacement and 8-inch guns. Italy followed this trend, the first design for what became Trento and Trieste being ordered in 1924. These were the fastest of the first generation ‘Treaty’ cruisers but were very lightly armored, and the succeeding Zara class of four ships were

slower but better protected. However, before the final ship of this class (Pola) had been completed, there was a return to the earlier fast, lightly protected concept with the Bolzano, although this ship also incorporated aspects of the Zara design. The political background, design history and technical features of these classes are covered in great depth in this volume. They were important ships, subject to incremental improvement so no two were identical, and modelmakers in particular will appreciate the space devoted to the variations in appearance, using both description and illustration. As major units of the Italian battlefleet, they were more active than most during the war and their careers are fully detailed, including analyses of damage suffered. Tragically, they were all sunk and the full circumstances of each loss is explored. As befits a technical history, the book is thoroughly illustrated with ship and armament plans, detail drawings and color camouflage schemes, as well as an outstanding collection of photographs. Translated from the same series that produced the highly successful Italian Battleships, this volume is a fitting companion.

Journal of the Royal United Service Institution Royal United Services Institute for Defence Studies, 1924

Journal of the Royal United Service Institution, Whitehall Yard, 1897

Italian Battle Fleet 1940-43 Enrico Cernuschi, 2024-04-25 A comprehensive, illustrated account of the wartime Italian battle fleet, from its ships and technology to command structure, logistics, codebreaking and more. In the 1920s, the Italian Navy faced great challenges. Mussolini's ambitious Italy turned away from its alliance with Britain and France, and the Regia Marina faced the prospect of confronting both the French Navy and the Mediterranean Fleet of the Royal Navy. In the years leading up to World War II, the Regia Marina built and deployed a powerful battleship-led fleet – known in Italy as 'La Squadra' – intended to make the Mediterranean an Italian sea once more. In this book, Italian naval historian Enrico Cernuschi offers a fresh assessment

of the wartime Italian battle fleet, based on his lifetime of primary-source research from both Italian and Allied sources. It offers a comprehensive portrait of this proud armada, how it was devised and built, and how it operated and fought. It covers a multitude of factors often overlooked, such as Italy's naval codebreakers, the fleet's logistics, and the qualities and limitations of Italian industry that supported it. The book also provides a concise account and analysis of the battle fleet's activities through the war, from major clashes such as the Battle of Calabria to lesser-known expeditions. The author's research into Italian wartime primary sources overturns some myths still commonplace in Anglo-American accounts. Illustrated with superb new artwork, maps and 3D diagrams, and featuring rare photos, this book is a fascinating account of Italy's great fleet of World War II.

Lloyd's Register of Shipping 1886 Lloyd's Register

Foundation, 1886-01-01 The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.

Journal of the Royal United Service Institution, 1894

Mussolini's Navy Maurizio Brescia, 2012-09-30 This book is a complete guide to the Regia Marina, the navy with which Italy fought the Second World War. Starting with the historical background, it describes how the navy developed, how it was organised, the facilities that supported it, and the operations it conducted both before and after the armistice in 1943. It also details all its ships, with full technical particulars, plans and photos. Furthermore, there are chapters on special topics like camouflage; uniforms, decorations and insignia; and a 'who's who' of important naval personalities; and the reference value of the book is enhanced by a comprehensive bibliography and guide to sources. The illustration is a noteworthy feature of the book as the author's collection of naval photographs is one of the best in Italy.

He is also a fine draughtsman, and his ship plans and colour illustrations are both detailed and accurate, adding a particular appeal for modelmakers. Of all the main combatant navies of this era, the Italian is probably the most poorly represented in English publications, so this comprehensive handbook will be especially welcomed by the naval history community.

Warship 2022 ,2022-05-26 A celebrated annual publication featuring the latest research on history, development, and service of the world's warships. For 45 years, Warship has been the leading annual resource on the design, development, and deployment of the world's combat ships. Featuring a broad range of articles from a select panel of distinguished international contributors, this latest volume combines original research, new book reviews, warship notes, an image gallery, and much more, maintaining the impressive standards of scholarship and research with which Warship has become synonymous. Detailed and accurate information is the keynote of all the articles, which are fully supported by plans, data tables, and stunning photographs. The varied topics in this year's annual includes articles on the Imperial Japanese Navy carriers Soryu and Hiryu, post-war radar development in the Royal Navy, gunboats in the Imperial German Navy, Soviet battleship designs of the early Second World War, modern European frigates, and the origins of the Yokosuka naval yard.

French Destroyers John Jourdan,Jean Moulin,2015-06-22 Between the wars the French produced some of the largest, and certainly the fastest, destroyers in the world. Known as Contre-Torpilleurs, these striking and innovatory super-destroyers form the core of this book, but the more conventional Torpilleurs d'Escadre are also covered. This history combines the technical and service material published in French-language monographs over the past two decades with the authors' own research from primary sources. The structure of the book follows that of the highly successful French Cruisers, with Part I devoted to the design

of each of the classes built after 1922. The text is accompanied by detailed data tables and illustrated by a comprehensive set of specially-drawn plans and schemas based on official documents, as well as carefully-selected photographs from French naval sources and from private collections. Coverage runs down to the Le Hardi class, the last pre-war design.. Part II deals with the historical side, covering the eventful careers of these ships before, during and after the war. This section is illustrated by maps specially drawn for the book, and by contemporary photographs. Like its highly successful predecessors, French Battleships and French Cruisers, this beautifully presented book blends technical and historical analysis to produce what must become the standard English-language reference work.
